THE WAY YOU NEED IT.

THAT'S POWER TO PRODUCE

EUROPE-WIDE DELIVERY IN 24H *** EUROPE-WIDE DELIVERY IN 24H *** EUROPE-WIDE DELIVERY IN 24H

POWER TO PRODUCE

Dear customers,

new technologies, industry advances and changing markets. Throughout our roughly 140-year history we have been faced with new challenges to stay relevant in the industry and to preserve customer satisfaction. Thus continuous change has embedded itself as a constant in our company philosophy.

More dynamic than ever before, the direct consequences of the coronavirus pandemic have put private and professional life under scrutiny. As a result, not only have we developed a comprehensive catalogue of measures to protect our employees, we have also pressed ahead with the digitisation of numerous processes with even greater intensity. So in 2020 there will be no printed catalogue. The full range, as well as new products and services, is available in the online shop and in the PDF catalogue.

We have systematically defined new service principles in recent years, in order to remain a reliable partner for you in the future. The transition from tool merchant to experts in manufacturing is our main objective.

This development is particularly apparent in the SARTORIUS Academy, which was opened in February. Here we not only ensure greater knowledge among our employees in the future, but we also hope to develop manufacturing solutions for you, with you. The centre of excellence in manufacturing processes, which was developed in cooperation with HURCO, represents intelligent networking from goods issue, through inputting the corresponding data into the machine, right up to the automatic reordering of the tools used for this purpose – and makes Industry 4.0 a reality.

With an eye to the future, we have expanded and optimised our online shop, always in line with your needs. It is not only the fastest of its kind in the tool industry, but also displays terms and goods availability in real time. This means you'll always find the right tool for your needs and you also get an online discount. We deliver orders within 24 hours – across Europe!

We thank you for your long years of loyalty and wish you good health above all and the POWER TO PRODUCE in industry.

SARTORIUS Werkzeuge GmbH & Co. KG

Ivica Pavlinušić
Managing Director

WITHOUT WORK, TOOLS ARE JUST THINGS

WE KNOW THAT DRILLS WHICH ONLY DRILL HOLES AND MILLING CUTTERS
WHICH ONLY MILL GROOVES ARE THE STANDARD.
ONLY WHEN THE HOLES AND GROOVES BECOME A PROFESSIONAL
PRODUCT DOES THE TOOL HAVE PURPOSE.

THAT'S WHY WE OFFER NOT ONLY PROFESSIONAL TOOLS,
BUT ALSO SERVICES THAT ALLOW YOU TO PRODUCE FASTER,
BETTER AND MORE EFFICIENTLY.

BECAUSE SARTORIUS IS THERE FOR YOU. FOR THOSE WHO DO, WHO BUILD,
WHO CREATE. NOT FOR WELL-INTENTIONED DIY PROJECTS,
BUT FOR PROFESSIONAL WORK AT A PROFESSIONAL STANDARD.
FOR THOSE WHO DON'T TINKER, BUT PRODUCE.
FOR THOSE WHO NEED ONE THING ABOVE ALL:

POWER TO PRODUCE

ADVICE FOR THAT SOMETHING EXTRA

You don't need to know everything. You just need to know someone who does. Like SARTORIUS. We've assembled a network of experts to help you find the right tool and solution for your manufacturing needs.

KNOW WHAT YOU NEED: YOUR CUSTOMER ADVISOR

When it comes to finding just the right product from the seemingly endless range of professional tools, you don't have to go it alone. Your customer adviser will support you directly on site. Our customer advisers are professionals who know what matters to you. So we offer you nothing but the solution that suits you best.

KNOW WHAT WORKS: OUR CUSTOMER MANAGEMENT

Whether order acceptance, delivery inquiries or telephone advice – our specialists in customer management are happy to assist you with any issues. They will answer your questions competently and forward your queries directly to the right places.

KNOW HOW IT WORKS: OUR APPLICATIONS ENGINEERS

We know that professionals understand professionals. That's why our applications engineers are always on hand to help you find the right solution. Particularly when your work becomes more specialised and standard simply won't cut it any more.

SARA GO: YOUR TOOLS ALWAYS AVAILABLE

IMAGINE YOU'RE WORKING ON AN URGENT ORDER, AND YOUR LAST MILLING CUTTER SUDDENLY WEARS OUT. NOW IMAGINE THAT IT DOESN'T MATTER AT ALL. BECAUSE YOUR PERMANENTLY-STOCKED TOOL STORE IS JUST TWO STEPS AWAY. THIS ISN'T A VISION OF THE FUTURE, THIS IS SARA GO. THIS IS POWER TO PRODUCE.

SARA GO is the clever tool dispensing system from Sartorius that allows you to have your very own tool store right in your production hall. Whether you choose our SARA GO AWAY starter model or one of the larger tool dispensers, you'll always enjoy the following benefits:

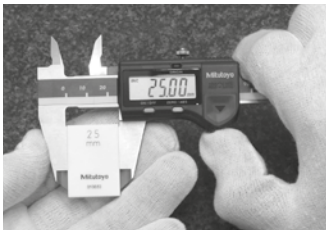
24/7 AVAILABILITY

No matter the time, SARA GO has the tool you need. Around the clock. Seven days a week.

FLEXIBLE STOCKING

SARA GO always has the tool you need. Our customer adviser handles the initial stocking and replenishes stock at a visiting frequency of two to four weeks. Thus your SARA GO system is permanently optimised and adapted to your current requirements.

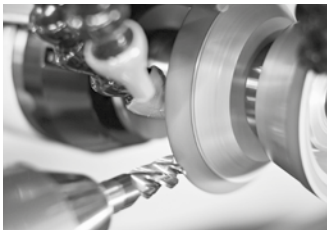
THREE SARA GO SYSTEMS, ONE OBJECTIVE: POWER TO PRODUCE



SARA GO AWAY
Our starter model. We provide it free of charge and with no contract for the first six to twelve months for the storage of up to 30 different tools.

SARA GO 1.0
Our smallest contract model. Ideal if you only need a small number of tools – 30 or more – permanently in stock.

SARA GO XPO *POWERED BY ZOLLER*
The large dispensing solution with automatic function. Space for plenty of tools and even more services. Because the SARA GO XPO takes care of everything automatically. Tool storage, tool dispensing with inventory monitoring and even automatic tool ordering.



FOR THOSE WHO ALWAYS GIVE IT THEIR ALL: OUR SERVICE

CALIBRATION SERVICE

Real professionals don't work with "rough" estimates: they have to be able to rely on the precision of their measuring equipment. We therefore offer calibration of your measuring equipment to DIN EN ISO/IEC 17025:2005. We also provide free collection, fast processing, accurate logging and express delivery on request.

RESHARPENING AND COATING SERVICE

You don't always have to buy a new one: our resharpening and coating service breathes new life into your old drill bits, milling cutters, saw blades, etc. and gives them back their POWER TO PRODUCE.

SARA GO XPO
POWERED BY ZOLLER

MAKE THE BEST EVEN BETTER: RELIABLE PRODUCTS FOR PROFESSIONALS

OUR FLYERS: QUICK AND STREAMLINED. EVEN IN THE PRICING

Although the catalogue is only published once a year, the international SARTORIUS TAKEOFF! flyer is sent out on a regular basis. And while these flyers are thin, they include everything you need to know – including plenty of attractive offers for your production.
Didn't receive a TAKEOFF! flyer? Then give us a call.

TO ENSURE THE BEST QUALITY, EVERYTHING MUST BE AVAILABLE AND IN PERFECT WORKING ORDER. WE ARE PROUD TO OFFER YOU EVERYTHING YOU NEED FOR YOUR PRODUCTION: STRONG PRODUCTS FROM MACHINING, CLAMPING TECHNOLOGY, MEASUREMENT SYSTEMS AND ENVIRONMENTAL TECHNOLOGY.

OUR ONLINE SHOP: CLICK, CLICK AND DONE

Just like the catalogue, but not so heavy: our online shop at **saratools.com**.
In addition to our wide range of products, we also offer some extra benefits:

- 24-hour delivery throughout Europe
- Exclusive online offers
- Online discount

PERFECT FOR PROFESSIONALS: OUR POWER BRANDS

BECAUSE WE ARE ALWAYS WORKING CLOSELY WITH THE PROS, WE KNOW WHAT PROFESSIONALS WANT. WHAT COULD BE BETTER THAN USING OUR WEALTH OF KNOWLEDGE TO PROVIDE YOU WITH THE PERFECT TOOL? PRECISELY. THAT'S WHY WE CREATED ATORN AND SARA – THE POWER BRANDS FROM SARTORIUS.

ATORN®

PERFORMANCE DEMANDS QUALITY.

We know that professionals don't just want good tools – they want the best. That's why we created ATORN. All ATORN tools are designed based on our wealth of manufacturing expertise, so you can produce better. The ATORN brand uses only high-quality materials and first-class processing techniques – and all this at an unbeatable price-performance ratio.

ATORN offers strong products in the following areas:

- Machining
- Clamping
- Measuring and testing
- Grinding
- Hand tools
- Workshop equipment

SARA®

SMALL NAME, BIG POWER

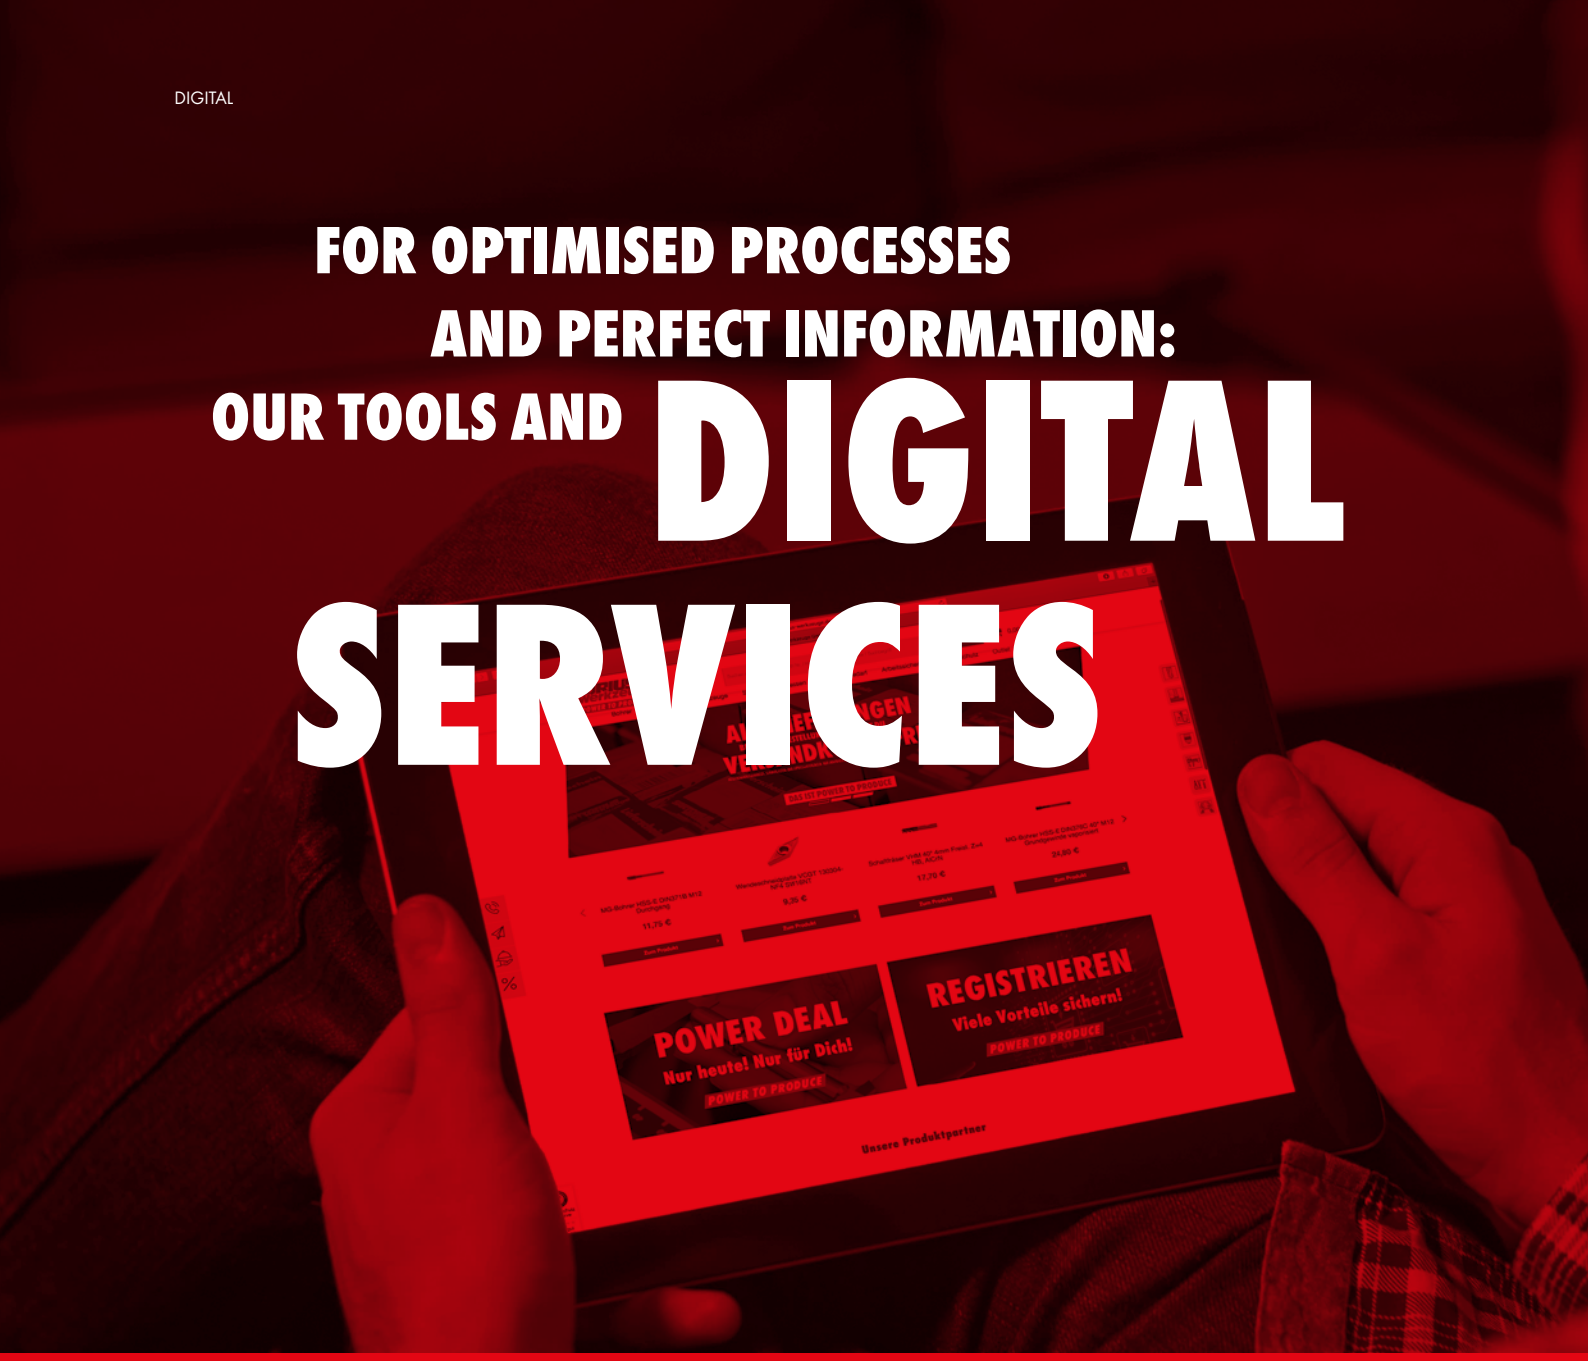
Our power brand SARA offers you over 10,000 strong products for your production. Whether clamp mountings, boring bars, clamping jaws, multifunction tools or milling cutters of any type – professionals will always be satisfied with SARA.

- High quality for high standards
- Functional and reliable to use
- Outstanding price-performance ratio
- High availability
- Extensive range

ACHIEVING MORE TOGETHER: OUR PARTNERS

OUR PRODUCT PARTNERS

Professional products for almost any application. It's no coincidence – and it's all down to our many partners. Partners with high-quality, innovative products. Partners such as:



WE ARE GLOBAL. BUT WE'RE LOCAL TOO. OUR DISTRIBUTION PARTNERS:

POWER TO PRODUCE is for everyone. We've built a large network of distributors across Europe – so you can always rely on SARTORIUS. Wherever you are. Wherever you work.

FOR OPTIMISED PROCESSES AND PERFECT INFORMATION: OUR TOOLS AND DIGITAL SERVICES

SARTORIUS IS THERE FOR EVERYONE. INCLUDING OUR ONLINE CUSTOMERS. OUR TOOLS AND DIGITAL SERVICES ARE A POWER UPGRADE FOR YOUR COMPUTER.

SMALL TOOLS, HUGE SUPPORT

Our digital tools help you to make your manufacturing processes even more efficient.

- Electronic tool selection programme
- Clamping jaws finder
- Toodle Configurator
- Product and diameter reference values for all machining products in different material groups
- Presentation of extensive product data and technical features
- Optimised search functions for products, accessories and spare parts
- Tool data for CAD / CAM systems (STEP AP214 / DIN SPEC 68874 / BMG / 3D-PDF, etc.)
- Strategic cooperation with CAD / CAM software specialists

POWER TO PRODUCE SINCE 1879

2020
New online shop,
Opening of the
SARTORIUS Academy

2019
140th company anniversary,
Opening of Czech Republic branch

2018
POWER TO PRODUCE
We use our integrated service package comprising process expertise and tool competence to optimise production and help our customers become more successful.

2017
The most successful year (highest sales) since the company's founding

2016
Approx. EUR 50 million in revenue with 183 employees

2014
135th company anniversary

2010
Product profile focused more distinctly onto core areas of machining, clamping technology, measurement systems, environment

1998
Accredited calibration laboratory of the German Calibration Service (DKD) for length measurements with an in-house measurement laboratory

1997
Certification to ISO 9002

1992
Construction and relocation to a new office and warehouse in Ratingen, Harkortstraße 54

1989
Company sold to
Adolf Würth GmbH & Co.

1978
Relocation to Sandstraße in the town of Ratingen outside Düsseldorf in response to the rapidly increasing demand for storage and office space

1964
As a general importer, Sartorius begins distribution of Mitutoyo measuring instruments in West Germany. This was the start of what remains a successful partnership today.

1944
Company building is destroyed by bombing. Rebuilt after the war

1929
The Hoppe family withdraws from the company. Paul E. Schrader remains the sole proprietor until 1967, when he is succeeded by his son Bernd

1904
Relocation to a new building with large warehouse space on Graf-Adolf-Strasse, Düsseldorf

1892
Company acquired by two employees, Paul Schrader and Karl Hoppe

1879
Company founded in Düsseldorf's old town district by Heinrich Sartorius. Today the entranceway of the original building is a protected historic monument.

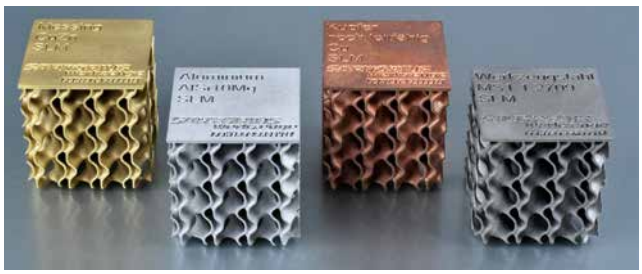
IF YOU HAVE ADDITIVE IS A FAMILIAR WORD IN MANUFACTURING.



THAT'S POWER TO PRODUCE

3D OBJECTS FOR PROFESSIONAL APPLICATIONS
EASY CONFIGURATION, SIMPLE ORDERING, SWIFT DELIVERY

SARTORIUS TOOLS AND PROTIQ

Additive manufacturing is a process through which an object is formed through the gradual application of materials based on digital 3D construction data. This application-based manufacturing process differs significantly from abrasion-based manufacturing methods. For example, instead of milling a workpiece from a solid block, additive manufacturing forms components from materials layer by layer. A wide variety of materials, such as metal, plastics and composites are available. Additive manufacturing is particularly suited to the production of prototypes or small batches.

ADDITIVE FERTIGUNG

PROTIQ
A Phoenix Contact Company

IT'S AS SIMPLE AS THAT

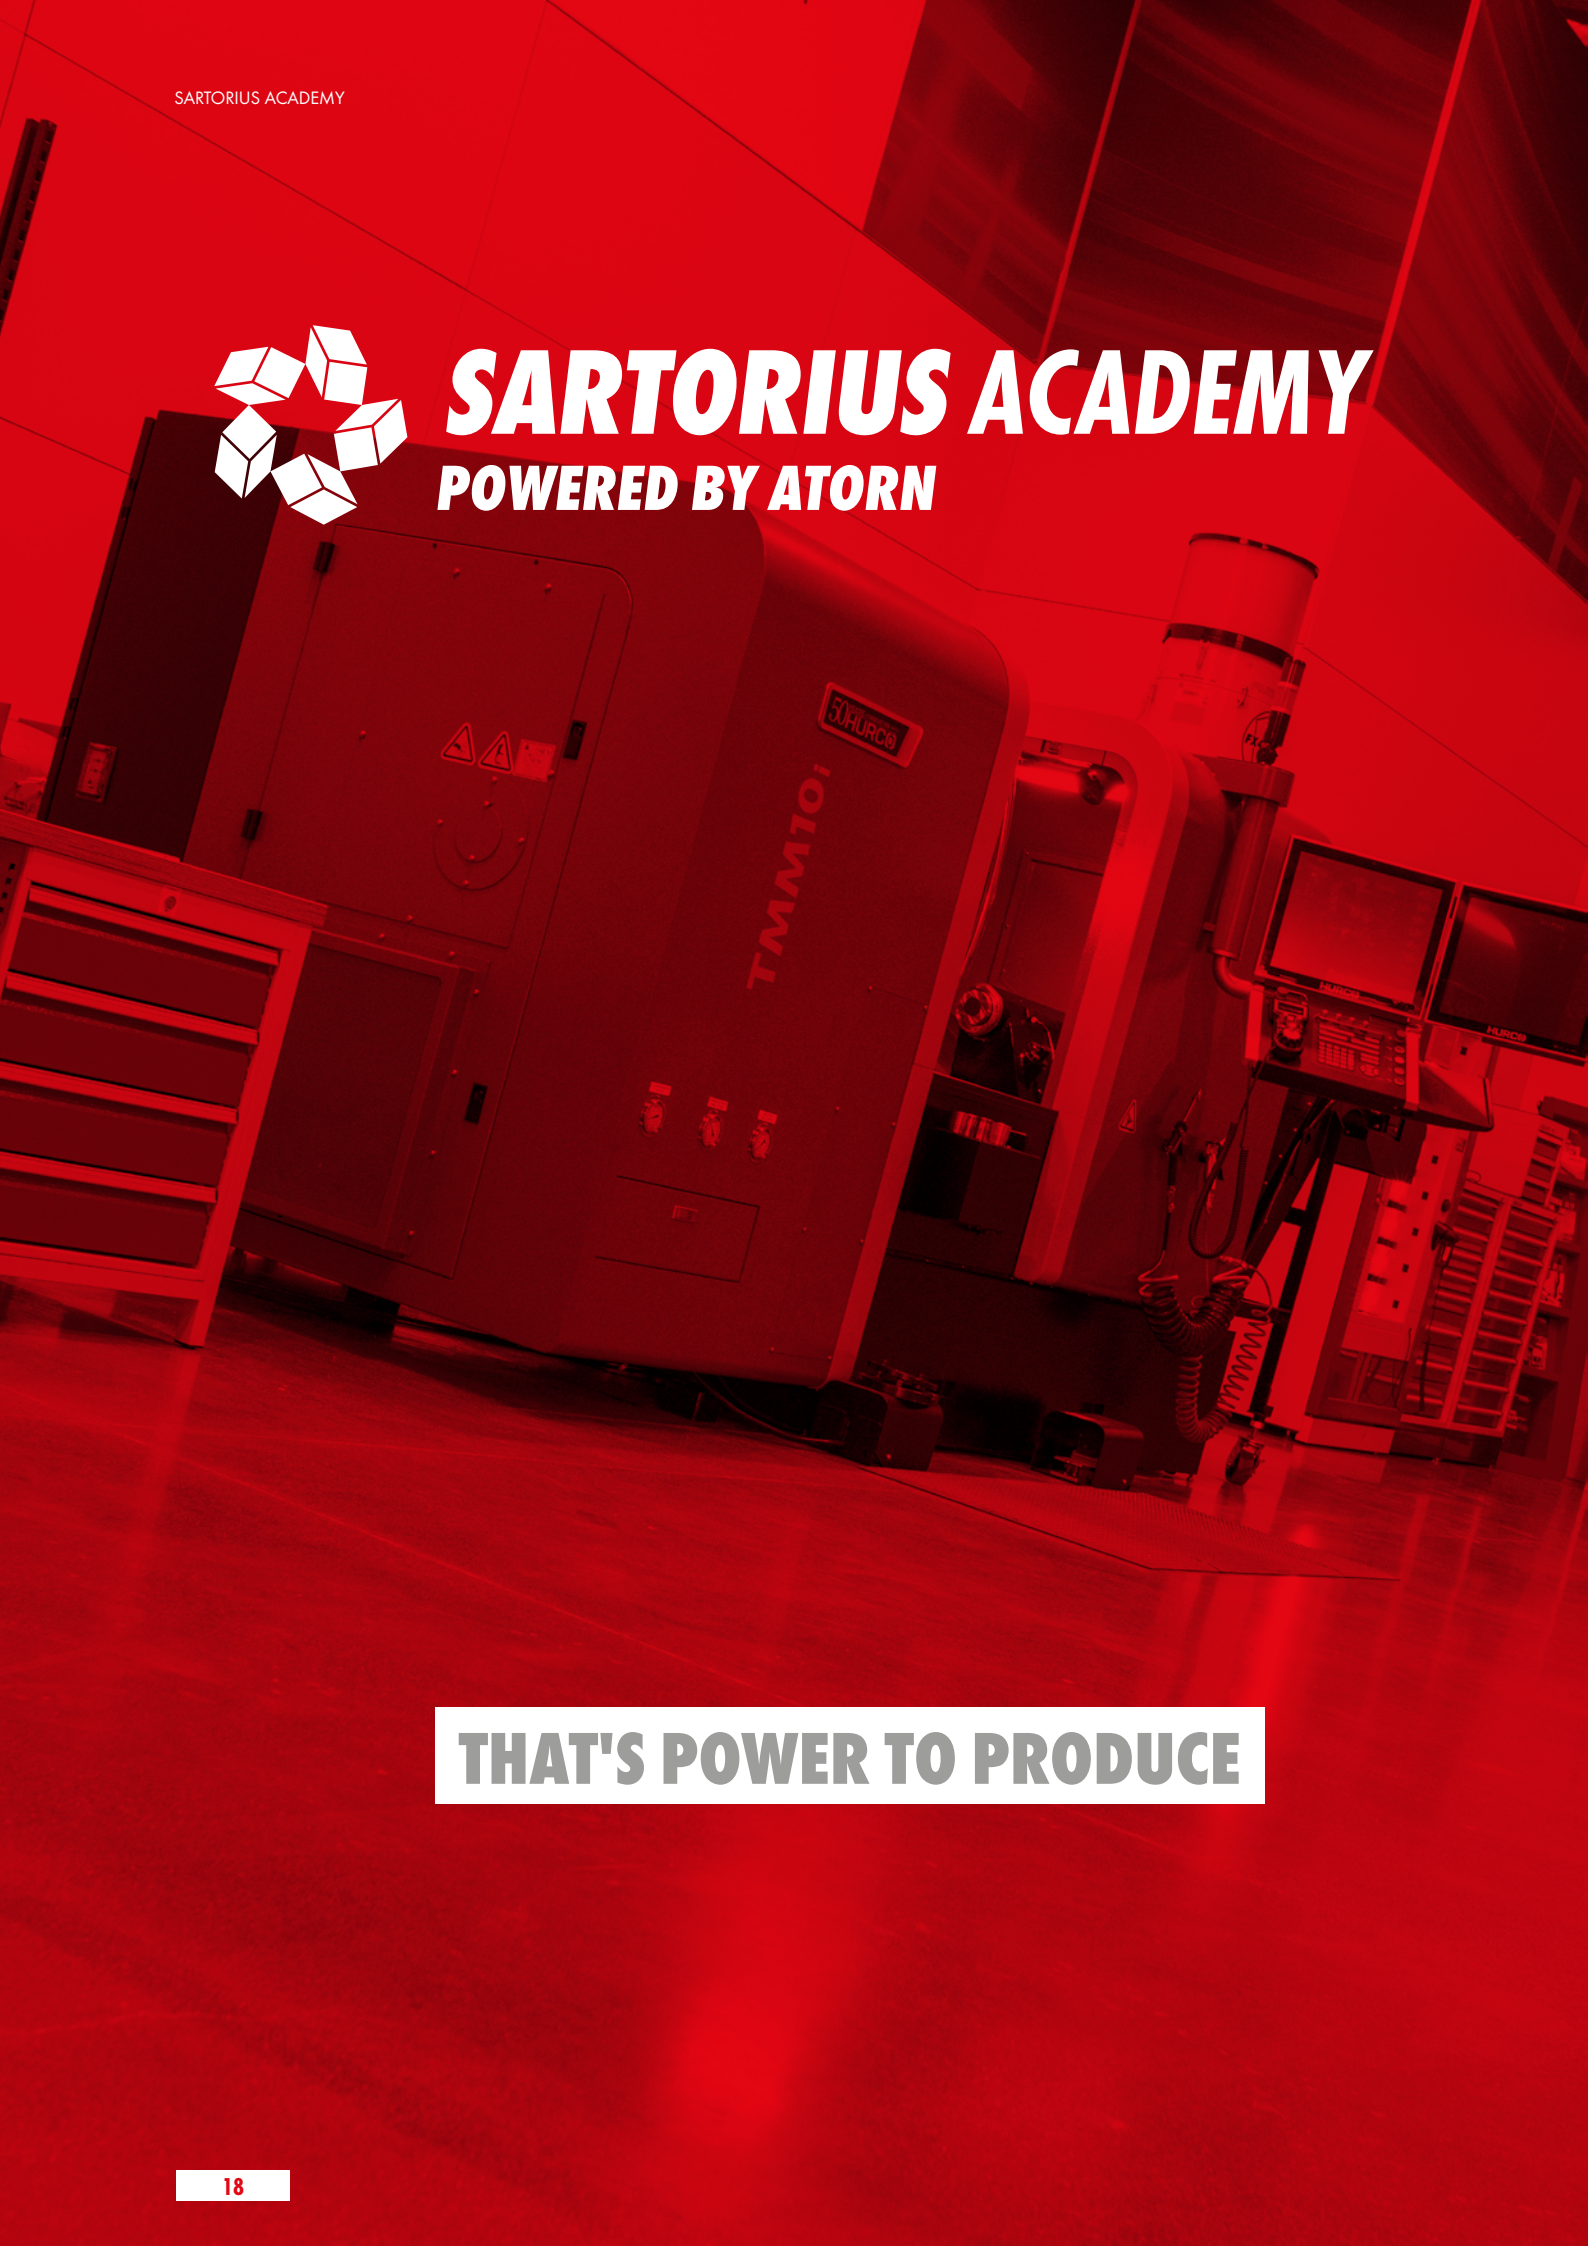
Our services are not only high quality, they are also easy to use. You can access the PROTIQ-Market-Place via **www.sartorius-werkzeuge.de**. Here you can configure individual objects or entire assemblies swiftly and conveniently. The portal also facilitates the approval process: Each customer account can include several employees with varying roles.

So you can easily configure and order high-quality 3D objects in no time:

FOR EVERY REQUIREMENT THE RIGHT SOLUTION

The basis for this is our diverse range of materials and manufacturing methods, supplemented by key services in additive manufacturing, such as training, reverse engineering and finishing.

Our portal itself is loaded with functions that actively support your business processes. For example, you have access to a convenient approval and ordering process and can upload entire assemblies to the configurator.



CREATE a 3D FILE
We process all conventional file formats.

UPLOAD the file
Drag'n'Drop the file into the upload field – done! Your file is automatically checked and corrected if necessary.

CONFIGURE YOUR OBJECT AND/ OR ASSEMBLY
You can adjust the size, colour and finish. The corresponding price is displayed instantly.

WE PRINT your ORDER
We manufacture quickly, with high precision and high-quality materials.

Your ORDER IS DISPATCHED
We dispatch your order by express delivery on request.

SARTORIUS ACADEMY
POWERED BY ATORN

THAT'S POWER TO PRODUCE

INVESTMENT IN KNOWLEDGE FOR A PROSPEROUS FUTURE.

FROM A VISION TO A CENTRE OF EXCELLENCE

Every journey begins with the first step. The first step towards the SARTORIUS Academy was taken in 2016. True to our POWER TO PRODUCE motto, we wanted to be closer to the customer. From pure tool merchant to experts in manufacturing. For this transformation to succeed, one aspect was paramount: the creation of our own academy. This objective was realised in conjunction with HURCO.

Founded in the USA 51 years ago, HURCO now develops and produces interactive computer controls, software and computer-aided machine tools predominantly in Europe.

And precisely two of these machines are now in the Academy. This is the perfect environment to test tools, to put innovations through their paces live on-site and to remedy user problems.

KNOWLEDGE TRANSFER FOR YOU, YOU AND YOU

Demographic change is no longer a nightmare scenario, but an industry-changing reality in the labour market. It requires the clever handling of newly-created options for increasing digitisation, whilst taking altered systematic processes into account. We recognise that and so do our customers. A skills shortage diminishes know-how. Meanwhile, the demands for productivity, efficiency and data processing are increasing.

In this difficult time of change it is important to take demographic development and changing job profiles into account, in addition to supplying the right tools, the corresponding knowledge and a cohesive production cycle. Specifically, this represents the intelligent networking of goods issue, through inputting the corresponding data into the machine, right up to the automatic reordering of the tools used. Or more simply: Industry 4.0. Toolmakers are increasingly becoming data technicians, which is no less challenging, but shifts responsibility onto finding solutions in manufacturing processes. All the more important is SARTORIUS Academy, where we can work on precisely these solutions.

In fact, SARTORIUS Academy is no less than a transition into a new era, in which our own employees are trained to develop solutions with customers and where Industry 4.0 can be experienced up close. Merchandise and knowledge enter into a virtually inseparable symbiotic relationship.
We call this: POWER TO PRODUCE.

WE'RE THERE WHEN YOU NEED US. NO MATTER WHERE:

24-HOUR DELIVERY ACROSS EUROPE

THAT'S POWER TO PRODUCE

IN RATINGEN TODAY – WITH YOU TOMORROW. THIS WORKS ONLY IF ALL LOGISTICS STATIONS MESH SEAMLESSLY.

REQUESTING THE RESHARPENING BOX

On request we provide you with a resharpening box, free of charge, to ensure the safe transit of your tools.
This can be requested free of charge from our Service Team:
Phone number: 02102 - 4400 - 3300
E-mail: service@sartorius-werkzeuge.de

FREE COLLECTION

Free, next-working-day collection of your tools within Germany with our transport boxes (eco-friendly reusable packaging). Your tools are securely delivered within 24 hours. You can also send your tools via a parcel service of your choice to:

SARTORIUS Werkzeuge GmbH & Co. KG
Resharpening service
Harkortstraße 54
40880 Ratingen

RECEIPT OF THE TOOLS

We check the type, size and efficiency of the tools – tools that cannot be resharpened shall be returned with the rest of the tools.

MACHINING

- Resharpening
- Coating
- Quality control
- Measurement log (on request)

The production areas are divided as follows:

- CNC grinding technology – shank tools
- CNC grinding technology – saw blades
- CNC grinding technology – drill bits
- Special tools and carbide saw blades
- Surface grinding technology
- Grinding rings
- Coating technology

DELIVERY

You can expect the return of your tools – resharpened, coated and measured (optional) – within 12 working days.

Now even faster: direct shipping

- Open the QR code on the regrinding box, then enter the collection address and the weight.
- Enclose the consignment note and close the box for shipping using the supplied seals
- UPS will collect the resharpening box within 24 hours and express-ship it to SARTORIUS Werkzeuge
- After the reconditioning is complete, it will be returned to you by express courier service, free of charge

Regrinding service

- Restoration of the original grinding, with new coating on request
- Fast processing, short waiting times
- Resharpening of other tools available on request
- The prices specified are a guide only
- **Additional costs are calculated based on outlay: e.g. regrinding of sets, extra-long milling cutters, trimming and re-facing**

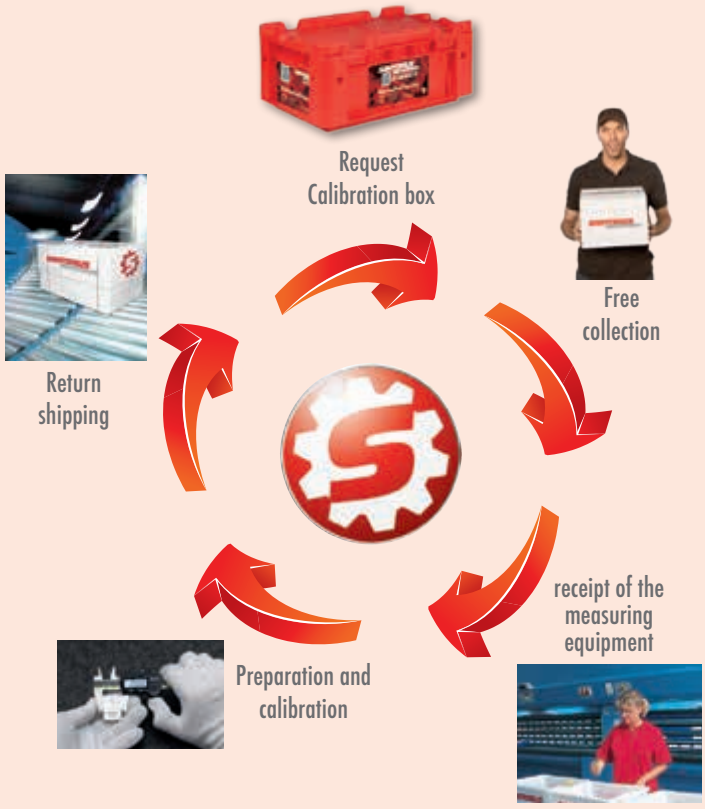
ISO 9000 ff test equipment monitoring service

element Metech

The Element Metech calibration laboratory is a calibration centre recognised by "Deutsche Akkreditierungsstelle GmbH" for dimensional measurements (length measurement equipment, diameter, thread) according to DIN EN ISO/IEC 17025:2005.

ONE CONTACT – EVERYTHING FROM A SINGLE SOURCE

We offer you extensive advice on monitoring test equipment and calibrating all physical quantities and units. We can repair and service test equipment on request, and we even calibrate stationary test equipment on-site too. Significant, internationally recognised test certificates and a short throughput time round off our range of services for you.



FREE COLLECTION

Free, next-working-day collection of your tools within Germany with our transport boxes (eco-friendly reusable packaging).
Your tools are securely delivered within 24 hours. You can also send your tools via a parcel service of your choice to:

SARTORIUS Werkzeuge GmbH & Co. KG
Calibration service
Harkortstraße 54
40880 Ratingen

DAKKS CALIBRATION SERVICES FOR THE FOLLOWING ELEMENTS:

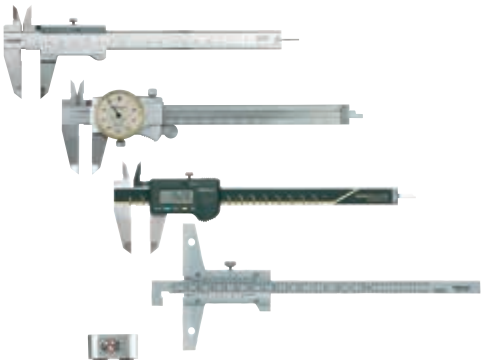
- Sliding callipers
- Outside micrometers
- Inside micrometers
- Dial indicators
- Indicating callipers
- Dial test indicators
- Setting gauges for outside micrometers
- Thread ring gauges
- Thread plug gauges
- Limit plug gauges
- Ring gauges
- Electrical measured variables
- Temperature
- Pressure
- Time and frequency

WE CALIBRATE THE FOLLOWING TEST EQUIPMENT:

- Length
- Diameter
- Thread
- Electrical engineering
- Mass
- Torque
- Force
- Temperature
- Humidity
- Lighting / brightness
- Pressure
- Gas flows
- Conductivity
- pH

Preparation	Calibration	Post-processing service	Complete service
• Cleaning • Demagnetising • Light reworking • Tempering	• Adjusting test equipment • Calibration according to VDI/VDE/ DGQ 2618 guidelines and DKD and the company's internal regulations • With inspection plate on request/ engraving	• Preservation • Hot-dipping • Packaging	• Repair on request

Calibration of indicating measuring instruments

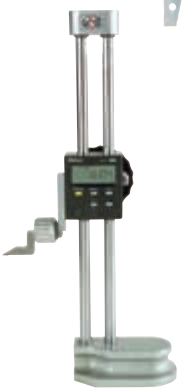


Including calibration, cleaning and de-magnetisation

- **Standard, device calibration, normal calibration:** factory calibration
- **DAkkS:** Testing and documentation in accordance with „Deutscher Akkreditierungstelle GmbH"

calipers and depth bars according to DIN 862

- Standard: Testing and documentation in compliance with VDI (Association of German Engineers) / VDE (Association for Electrical, Electronic & Information Technologies) / DGQ (German Society for Quality) 2618, Sheet 9.1 and Sheet 9.2



Measurement range mm	Default art.no.	€	DAkkS art.no.	€
Up to 200	**070101** 0001	8,80	**070102** 0001	16,–
Up to 300	070101 0002	16,70	070102 0002	20,20
Up to 500	070101 0003	26,–	070102 0003	35,–

Calibration of gauge blocks

Including calibration, cleaning and de-magnetisation

- Depending on user requirements, we offer four different scopes of testing for parallel gauge blocks:
- **Test Scope A**
  Test of the kick-start-ability using optical flats, determination and documentation of the centre deviation relative to the nominal dimension, the fo and fu deviations, the deviation span fs, as well as the specification of the degree of accuracy according to DIN EN ISO 3650 or VDI (Association of German Engineers) / VDE (Association for Electrical, Electronic & Information Technologies) / DGQ (German Society for Quality) 2618, Sheet 3.1
- **Test Scope B**
  Testing and documentation corresponds to A but excludes testing of the kick-start-ability
- **Test Scope C**
  Testing and documentation of the centre deviation
- **Test Scope DAkkS**
  Testing and documentation in accordance with „Deutscher Akkreditierungstelle GmbH"
- If the order does **not stipulate the scope of testing** we shall test as follows:
  new gauge blocks: Test B
  Recalibration: Test A

In accordance with DIN EN ISO 3650, acc. 0, 1 or 2

- Steel, carbide or ceramic
- Individual gauge blocks > 1000 mm, available on request
- Including finishing service

Nominal dimension mm	Test A art.no.	€	Test B art.no.	€	Test C art.no.	€	DAkkS art.no.	€

Calibration of thread gauges

Including calibration, cleaning and de-magnetisation

- The prices for the thread gauges listed in the following apply to single pitch threads. For threads with multiple pitches, the basic price for single pitch threads must be multiplied by the number of pitches.
- For the extended documentation of the thread geometry (profile check), an additional EUR 18 will be charged for go and no-go thread ring gauges, as well as for go and no-go thread plug gauges.
- For thread plug gauges, an additional fee of EUR 36 will be charged.
- **Standard:** factory calibration
- **DAkkS:** Testing and documentation in accordance with „Deutscher Akkreditierungstelle GmbH"

Go thread gauges, no-go plug gauges and adjusting mandrels

- Standard: Testing and documentation in compliance with VDI (Association of German Engineers) / VDE (Association for Electrical, Electronic & Information Technologies) / DGQ (German Society for Quality) 2618, Sheet 4.8

Calibration of stationary measuring equipment

INFO

Fixed measuring equipment such as measuring microscopes, measuring projectors or dual- or triple-coordinate-measuring systems with manual or CNC control are subject, as is all other measuring equipment, to periodic monitoring and calibration.

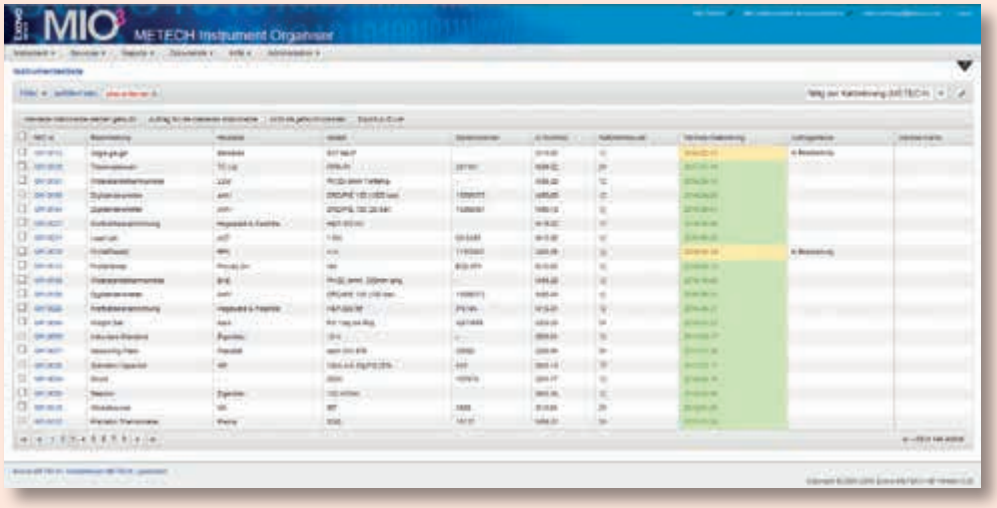
For this measuring equipment we also offer our calibration services at the installation site

Please request an offer.

Testing and measurement instrument management

INFO

MIO™ - METECH Instrument Organizer



Testing and measurement instrument management

Testing and measurement instrument management are very important parts of any quality management system. Your testing and measurement instruments must be recorded in a traceable way in a management system, and it must be possible to obtain sufficient and verifiable information about your testing and measurement instruments from this management system at any time.
SARTORIUS Werkzeuge and Element Metech offer you this option with the web-based MIO™ testing and measurement instrument management system. MIO™ (METECH Instrument Organizer) covers all the requirements of the relevant regulations and standards for monitoring your measurement instruments.

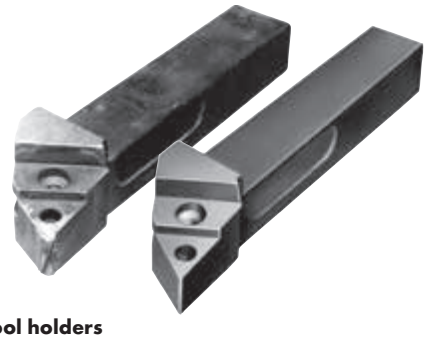
MIO™ advantages

The MIO™ web-based testing and measurement instrument management system makes it possible for you to monitor, track and manage all of your testing and measurement instruments with hardly any effort on your part. MIO™ provides you with the following advantages:

- web-based access over any internet connection
- no installation of software on your computers
- archiving of data and calibration certificates on external servers, no burden on your infrastructure
- meets all requirements of ISO 9001, ISO 1012, ISO 17025 and other QM systems
- automatic reminders for measuring instruments that are due to be checked
- colour representation of calibration status
- calibration certificates directly assigned to the device as a PDF
- any document from the history can be viewed immediately
- various management options regarding allocation of information such as cost centre, place of use, etc.
- various filter options to limit the selection
- data maintenance for calibration by Element Metech

Tool repair service

- State-of-the-art reconditioning of damaged machining tools with indexable insert seats
- We guarantee the tolerances, geometrical shapes and wear resistance specified by the original tool manufacturer for standard tools, and also for drawing-based special tools
- Measurement logs on request (measurement logs are only useful from a technical perspective if all insert seats have been repaired or reconditioned, as otherwise the tolerances of the tool cannot be fully guaranteed)
- Reduces tooling costs during production, cost of refurbishment is only approx. 50 % of the new price
- Short delivery times
- Many years of experience with more than 750,000 refurbished insert seats
- Unless otherwise specified, all prices are unit prices per tool, irrespective of how many insert seats are damaged e.g. in a milling head.



- Please send the tools free of charge to our address
- The equipment will be returned on payment of the costs incurred.

The before and after effect

- **Special tools**
  We also offer our Tool Repair Service for all special tools or machining tools with indexable insert seats which are not included in this list. Please send us the tools, including their exact specifications and drawings, as well as the necessary original spare parts such as indexable inserts, support plates, clamping screws etc. for at least one insert seat. You will then receive our estimate of costs immediately.

Summary of icons used for drilling tools

INFO

Cutting material	HSS – High-performance, high-speed steel	HSS-E – High-performance, high-speed steel Cobalt-alloyed	VHM – Solid carbide
Coating	TiN – Titanium-nitride coating	TiCN – Titanium-carbo-nitride coating	TiAlN – Titanium-aluminium-nitride coating
Surface treatment	Nit. – Nitrided surface	Vap. – Vapour-treated surface (steam-treated)	
Type/profile	Typ N – e.g. type N, for normal materials	Typ TLP – e.g. type TLP Deep hole profile	Typ VA – e.g. type VA for machining stainless steel
Standard	DIN 338 – Complies with DIN 338	ISO 10898 – Complies with ISO standard 10898	Werks-norm – Manufactured in accordance with factory standard
Shank design	DIN 6535 HA – Straight shank in accordance with DIN 6535 HA	Straight shank with Weldon clamping surface	MT shank
Drilling depth	3xD – possible drilling depth at least 3 x diameter		
Point angle	118° – Point angle of the drill is 118°		
Ground point	Cone-shaped shell	Pointed crosscut	Facet-ground
Spiral angle	15° – Spiral angle is 15° right-hand twist	40° – Tap 40° right-hand twist	
Form (centring drill)	A – Form A For centring holes without protected centre	B – Form B For centring holes with tapered protected centre	R – Form R For centring holes with radius
Countersink angle	60° – Countersink angle is 60°		
Thread	M – metric thread	MF – metric fine thread	BSW – British Standard Whitworth
Thread depth	2,5xD – possible thread depth 2.5 x nominal diameter		
Thread angle	60° – Thread angle is 60°		
Chamfer	B 3,5-5 – Tap with 3.5-5-way chamfer	Tap with spiral point	Tap straight-fluted; Forming tap with oil grooves
Threaded hole type	For blind-hole threads	For through-hole threads	For blind-hole and through-hole threads
Coolant bore version	Axial coolant outlet	Radial coolant outlet	
Cutting data	i Vc/fz – Further information such as cutting data recommendations is available in the technical appendix

ATORN® Centring drills with radius

HSS | DIN 333 | R | 60° | i Vc/fz | 348

- For centring holes with radius DIN 332 R
- combines an annular application of the workpiece at the centre point with the advantages of a bell-type countersink, improved fit of the workpiece
- Greater stability due to radial transition
- Reduces risk of breaking
- Spiral-fluted, bare surface

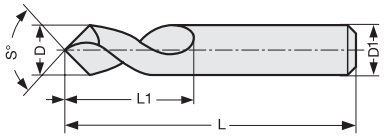
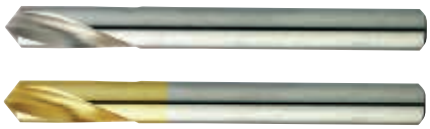
Fig. Form B





ATORN® NC spotting drill

HSS-E | ISO 10898 | 90° | 120° | DIN 1835 A | TiN | Vc/fz | 349

- S° = point angle 90° or 120°
- Precision-ground point
- Version 90° from Ø 4 mm pointed
- High stability due to short chip flutes
- For fast drilling on NC/CNC machines and machining centres with precise positioning

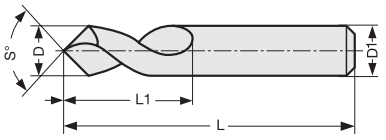
ATORN® NC spotting drill, long

HSS-E | Werks-norm | 90° | 120° | DIN 1835 A | Vc/fz | 349



- **Long version for machining with access problems**
- S° = point angle 90° or 120°
- Precision-ground point with slender chisel edge
- High stability due to short chip flutes
- For fast drilling on NC/CNC machines and machining centres with precise positioning

ATORN® KSB-3D twist drill

HSS-E PM | DIN 1897 | Typ TLP | 130° | 27° | 3xD | TiN | Vc/fz | 351

- Low wear on cutting edges
- Especially resistant to high temperatures
- **Extended service life**
- Excellent chip removal
- **Short chips**

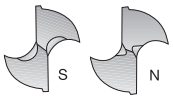
EX-SUS-GDS twist drill bit

HSS-E V3 | Werks-norm | Typ VA | 120° | 130° | 140° | 35° -40° | 3xD | TiN | Vc/fz

352



- Large chip spaces, high toughness
- Reduced heat build-up
- Shank design: straight
- **From Ø 12.1 with driving plane in accordance with DIN 1835B**
- S°= point angle: < Ø 2 mm = 140°, ≤ Ø 4 mm = 130°, > Ø 4 mm = 120°
- Centring geometry: up to Ø 13 mm S version, from Ø 13.5 mm N version
- Available on request: Intermediate dimensions from Ø 0.5 to Ø 6 mm (in 0.01 mm increments)

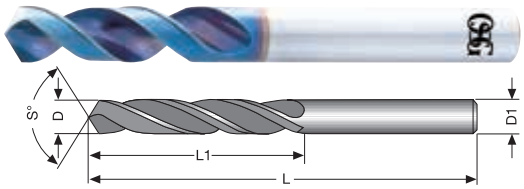
NEXUS-GDS twist drill



HSS-E | Werks-norm | Typ VA | 120° | 130° | 140° | 35° -40° | 3xD | TiAlN | Vc/fz | 352

- High spiral angle (35 - 40°) and unique flute shape reduce the cutting forces and the heat generated during machining
- **Short breakage chips even with tough materials such as stainless steel or copper**
- Shank design: straight
- S°= point angle: < Ø 2 mm = 140°, < Ø 4 mm = 130°, > Ø 4 mm = 120°
- **Cutting material: high-quality vanadium alloy HSS, WDI™-coated**
- Wear-resistant, suitable for a broad range of materials thanks to multi-layer coating

material — ● very well suited ○ well suited

SARA® Body drill

HSS | Werks-norm | Typ N | 130° | 30°

- Especially short drill bit for sheet machining
- Dimensions **similar to DIN 1897**
- Profile-ground with point thinning, self-centring
- Without chamfer, to prevent the drill from jamming
- **Single and double-sided versions**
- For drilling thin-walled sheet metal

For sheet metal machining

ATORN® Twist drill bit

HSS | DIN 338 | Typ TLP | 130° | 38° | 5xD | Nit. | Vc/fz 354

- **Self-centring**
- Optimised chip flute profile for excellent chip removal
- Nitrided chamfers from ø 2.4 mm

… for special measurement tasks

ATORN®
High quality for great performance

Over 180,000 tools available online!

Advantages:
- convenient, clear and fast
- order by 19:30 for next-day delivery
- order measuring instruments including calibration
- available in real time
- in 8 languages

Register online now!

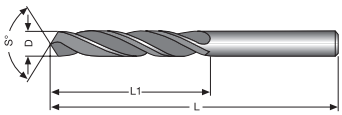
ATORN® Twist drill UNI



HSS-E | DIN 338 | Typ U | 118° | 38° | 5xD | Vc/fz | 353

- Special point thinning
- Self-centring
- 4-facet grinding
- **For universal applications**
- Smooth operation
- **Low torque**
- Optimum chip removal with round groove profile

Universal multi-purpose drill bit

ATORN® Twist drill, with 3 surface shank

HSS-E | DIN 338 | Typ VA | 135° | 40° | 5xD | Vc/fz | 353

also ideal for stainless steel

- **3-facet grinding** on shank (from Ø 4 mm) for optimum transfer of force and secure hold in the drill chuck, no possibility of slippage
- Low force application when opening and closing in the drill chuck
- **Special surface treatment** in conjunction with relief grinding for maximum lubricant adhesion and for fast, reliable chip removal
- Designed especially for use on portable drilling machines

ATORN® KSB-5D twist drill

HSS-E PM | DIN 338 | Typ TLP | 130° | 38° | 5xD | TiN | Vc/fz | 356

- Self-centring
- Low wear on cutting edges
- Especially resistant to high temperatures
- Extended service life
- Excellent chip removal
- **Short chips**

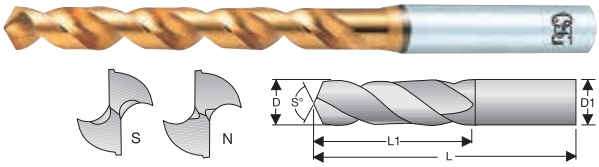
EX-SUS-GDR twist drill bit



HSS-E V3 | Typ VA | 120° | 130° | 35° -40° | 5xD | TiN | Vc/fz 352

- Large chip spaces, high toughness
- **Reduced heat build-up**
- Shank design: straight
- **From Ø 12.1 with driving plane in accordance with DIN 1835B**
- S°= point angle: ≤ Ø 4 mm = 130°, > Ø 4 mm = 120°
- Centring geometry: up to Ø 13 mm S version, from Ø 13.5 mm N version
- Available on request: Intermediate dimensions from Ø 2 to Ø 6 mm (in 0.01 mm increments)

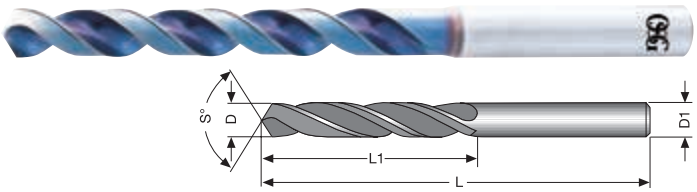
NEXUS-GDR twist drill

HSS-E | Werks-norm | Typ VA | 120° | 130° | 35° -40° | 5xD | Vc/fz | 352



- High spiral angle (35 - 40°) and unique flute shape reduce the cutting forces and the heat generated during machining
- **Short breakage chips even with tough materials such as stainless steel or copper**
- Shank design: straight
- S°= point angle: < Ø 4 mm = 130°, > Ø 4 mm = 120°
- **Cutting material: high-quality vanadium alloy HSS, WDI™-coated**
- Wear-resistant, suitable for a broad range of materials thanks to multi-layer coating

ATORN® Twist drill bit

HSS | DIN 340 | Typ N | 118° | 30° | 10xD | Vap. | Vc/fz | 353

- **For deep bores** (multiple chip removal)
- vapour-treated from ∅ 2.4 mm, point thinning from ∅ ≥ 1 mm
- Profile-ground to meet the highest demands for process reliability
- **Pilot hole recommended**

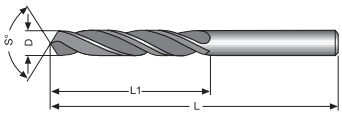
ATORN® Twist drill bit

HSS | DIN 340 | Typ TLP | 130° | 38° | 10xD | TiN | Vc/fz | 356

Deep bore profile



- For deep bores (no chip removal)
- **Wide chip flutes for better chip removal**
- Point thinning from Ø > 1 mm
- Profile-ground to meet the highest demands for process reliability
- **Pilot hole recommended**

ATORN® Twist drill bit

HSS-E | DIN 340 | Typ TLP | 130° | 40° | 10xD | Nit. | Vc/fz | 353

- Wide chip flutes
- Profile-ground, chamfers nitrided from a diameter of 2.4 mm
- High wear-resistance
- Recommended in cases of poor chip removal
- **Pilot hole recommended**

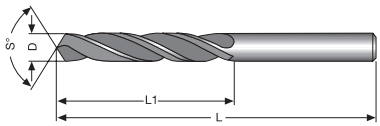
ATORN® Twist drill bit

HSS-E | DIN 340 | Typ VA | 130° | 35° | 10xD | Vc/fz | 356



Stainless steel

- **For deep bores** (multiple chip removal)
- Point thinning from Ø ≥ 1 mm
- Increased wear-resistance with special geometry for machining stainless steel
- **Pilot hole recommended**

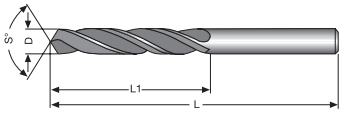
ATORN® Deep hole drill bit



HSS | DIN 1869 | Typ TLP | 130° | 38° | >10xD | Nit. | Vc/fz | 357

- **For extremely deep bores, 15xD to 25xD**
- Flat slot shape for increased chip space, leading to less frequent chip removal in particularly deep holes
- Point thinning from ∅ ≥ 2 mm
- Slots bare
- **Nitrided chamfers from Ø 2.5 mm**
- **Pilot hole recommended**

Deep bore profile

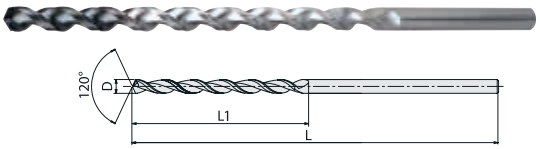
TDXL high-performance deep hole drill

HSS-E | Werks-norm | Typ TLP | 120° | 40° | 10xD | 15xD | 20xD | TiAlN | Vc/fz | 357



Drilling without chip removal

- **Flat flute for increased chip space, drilling without chip removal**
- **Bore depths of 10xD, 15xD and 20xD**
- New chip flute structure for enhanced chip removal, polished wave-shaped flute
- Newly developed point thinning for lower torque, axial force and friction
- New heat and wear-resistant WXL coating with a very low friction coefficient
- **Cutting material: HSS-E, WXL-coated**
- Shank tolerance h7
- Use with water-soluble emulsion recommended
- **Without internal cooling**
- **Pilot hole recommended**

ATORN® Twist drill bit (drilling bush), with MT shank

HSS | DIN 341 | Typ N | 118° | 30° | 10xD | Vap. | Vc/fz | 358

- Special geometry
- **For drilling through drill guide bushes**
- In comparison to DIN 345, the spiral length is extended by the height of the drill guide bush so that the effective drilling depth is not reduced
- Morse taper shank
- **Vapour-treated**

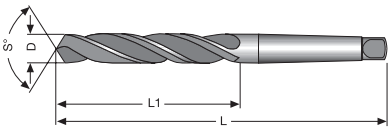
ATORN® Deep hole drill with MT shank

HSS | Werks-norm | Typ TLP | 130° | 38° | >10xD | Vc/fz | 353



Deep bore profile

- Extra-long, for deep bores
- **Wide chip flutes for better chip removal**
- Morse taper shank
- **Pilot hole recommended**

ATORN® Core drill with MT shank

HSS | DIN 343 | Typ N | 120° | 25° | Z 3 | Vc/fz | 358

3 cutting edges

- **MT shank with driving pin lugs in accordance with DIN 228**
- Robust drill with strong core for optimum guidance in the bore hole
- **For drilling pre-drilled, pre-cast or pre-punched holes**
- The sturdy design and 3 cutting edges correct alignment inaccuracies and roundness issues in prefabricated holes
- **Also available with straight shank where required**

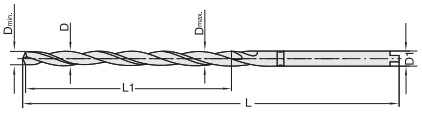
ATORN® Pin hole drills

HSS | DIN 1898A | 118° | 25° | Vc/fz | 358



- **Cutting edges with conical gradient and chip-breaking flutes**
- Used to drill conical drill holes 1:50 for taper pins in compliance with ISO 2339 (DIN 1) and ISO 8736 (DIN 7978) in one operation.
- Further sizes available on request
- Driving plane in accordance with DIN 1809
- **Note:** drill using a low feed rate

ATORN® Step drills

HSS | DIN 8378 | DIN 8374 | DIN 8376 | 118° | 29° | Vap. | Vc/fz | 353

- Cone-shaped shell
- **Vapour-treated**
- Point thinning in accordance with DIN 1412 type A
- Ø tolerance h8, other design features in accordance with DIN 1414
- **Note:** The cutting speed is determined by the large diameter, while the feed rate is determined by the small diameter for core drilling

DIN 8376

SARA® STEP step drill

HSS | Werks-norm | TiN

- **For burr-free drilling and reaming of sheet metal, pipes and sections and one-sided deburring in a single operation**
- The exact bore diameter results from the cylindrical graduation, the ground section of each step deburrs the next smaller bore diameter
- Point thinning in accordance with DIN 1412 C
- Especially suitable for use on hand drills when drilling thin materials
- **Corner breakers for double-sided deburring** (up to 1.5 mm sheets)
- No need for pre-drilling or centre punching even with curved surfaces
- **Straight shank with 3 driving planes prevents "slipping" in the chuck**
- Laser scaling of bore diameters and rotational speed data
- **Note:** material thickness suitable up to 5 mm

- Super-fast drilling times and longer service life
- Guaranteed core removal
- **5 to 10 times longer service life than with a traditional twist drill bit**
- **No pre-drilling required**
- Surface is smooth and burr-free
- **Precise centring by means of guide pin**
- Other versions up to Ø 130 mm and various cutting material qualities (e.g. HSS-Co8) available on request

Ideal for machines with low drive power

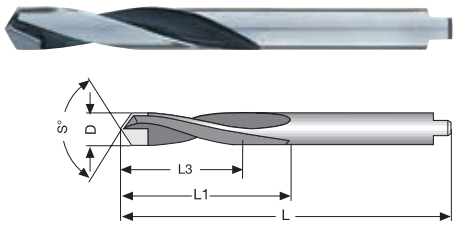
SARA® Carbide-tipped twist drill bit



HM | DIN 8037 | 118° | 15° | 3xD

- With driving pin in accordance with DIN 1809 for use in collets
- HSS shank
- **Cutting element: carbide K10**
- Solid carbide cutting edges with four-facet grinding
- Self-centring
- Intermediate dimensions available on request

ATORN® Centring drills

VHM | Werks-norm | A | 60° | Vc/fz | 348

- For centring holes without protected centre DIN 332 A
- Spiral-fluted, bare surface
- Precision-ground version, high true-running accuracy
- With application of the workpiece to the centre point over a large surface area
- Suitable for heavy workpieces when using revolving centre points

SC high-performance drill ADO-MICRO

VHM | Werks-norm | Typ TLP | 140° | 135° | | 30° | 2xD | 5xD | 12xD | 20xD | 30xD | DIN 6535 HA | | TiAlN | Vc/fz | 366

- 2xD, 5xD: 0.7-2mm, 12xD, 20xD, 30xD: 1-2mm
- **SC material, IchAda coating**
- Double guide chamfers for a high degree of stability
- Internal coolant supply with a hollow shank increases the flow rate

Deep-hole bores with minimal diameters

ATORN® Solid carbide twist drill bit set

VHM | DIN 6539 | Typ N | 118° | 32° | 3xD | TiN | Vc/fz | 360

- Set supplied in a case
- Diameter 1.0 to 10.0 mm in 1.0 mm increments
- Sturdy twist drill bits for automated units / capstan lathes

SARA® TiNplus HPC 3D solid carbide high-performance drill bit without internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 3xD | DIN 6535 HA | DIN 6535 HB | TiN plus | Vc/fz | 361

- Newly developed geometry with reinforced core and special point thinning
- **Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- **For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- Shank designs up to Ø 2.9 mm HA, from Ø 3.0 mm HB

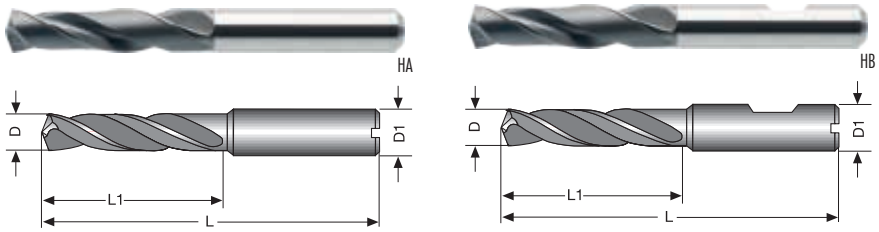
ATORN® TiAlNplus HPC 3D solid carbide high-performance drill bit without internal cooling



VHM | DIN 6537 | Typ U | 140° | 30° | 3xD | DIN 6535 HA | DIN 6535 HB | TiAlN plus | Vc/fz | 362

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life

SARA® TiNplus HPC 3D solid carbide high-performance drill bit with internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 3xD | DIN 6535 HB | TiN plus | Vc/fz | 361

- Newly developed geometry with reinforced core and special point thinning
- **Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- **For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **With internal cooling**

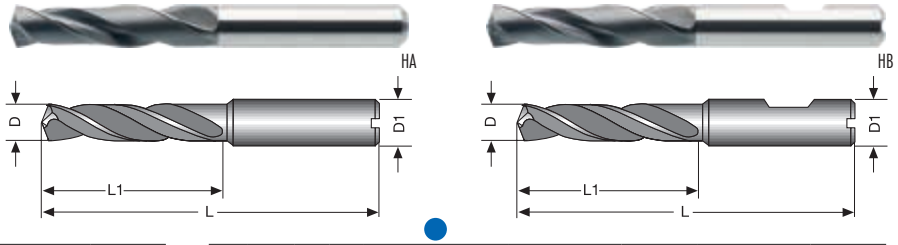
ATORN® TiAlNplus HPC 3D solid carbide high-performance drill bit with internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 3xD | DIN 6535 HA | DIN 6535 HB | TiAlN plus | Vc/fz



362

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **With internal cooling**

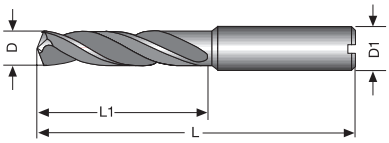
ATORN® SC high-performance drill Ultra-M 3D

VHM | DIN 6537 | Typ VA | 140° | 30° | 3xD | DIN 6535 HA | DIN 6535 HB | TiAlN | Vc/fz | 362

- Special geometry, facet-ground, maximum tool life, high process reliability
- Shank design:
  HA with coolant bore, smooth straight shank, DIN 6535 HA
  HB with coolant bore straight shank DIN 6535 HB
- **Cutting material: solid carbide, TiAlN-Ultra-M-coated**
- True-running accuracy of the tool when clamped max. 0.02 mm
- **Especially suitable for stainless steel and superalloys**

Especially for stainless steel



material: ● very well suited ○ well suited

steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

ADO-SUS-3D solid carbide high-performance drill

VHM | Werks-norm | Typ VA | 140° | 30° | 3xD | DIN 6535 HA | TiAlN | Vc/fz | 368

- **Cutting material: solid carbide, WXL-coated**
- Sharp cutting edges reduce machining-induced material hardenings
- **Short and compact chips thanks to innovative chip flute geometry**
- Friction-reducing protective chamfer reduces heat development
- **New coolant bore design increases coolant flow rate and thus reduces heat generation in the material**
- Increased coating adhesion of the new WXL coating reduces premature wear and coating spalling

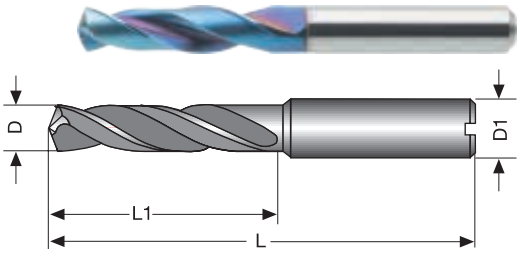
ATORN® Solid carbide high-performance drill bit HARD 3D

VHM | Werks-norm | Typ H | 140° | 20° | 3xD | DIN 6535 HA | TiAlSiN | Vc/fz | 361



Up to 65 HRc

NEW · NUOVO · NEU · NOUVEAU · NUEVO

- for machining drill holes up to 65 HRC
- **Cutting material: SC, TiAlSiN coating**
- reinforced core and special point thinning with sharp chisel edge
- no internal coolant supply for increased stability
- **also available in 5xD**
- **Note:** Do not hard drill dry!

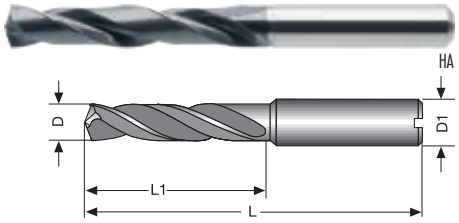
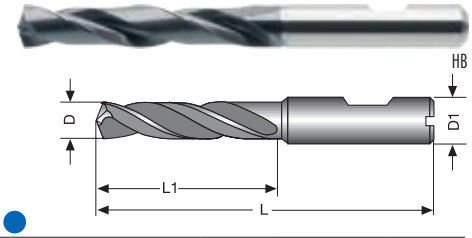
ATORN® TiAlNplus HPC 5D solid carbide high-performance drill bit without internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 5xD | DIN 6535 HA | DIN 6535 HB | TiAlN plus | Vc/fz



362



- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **Without internal cooling**

SARA® TiNplus HPC 5D solid carbide high-performance drill bit with internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 5xD | DIN 6535 HA | DIN 6535 HB | TiN plus | Vc/fz | 361

- Newly developed geometry with reinforced core and special point thinning
- **Solid carbide ultra-fine grain cutting material TiNplus** (TiAlN+TiN)
- Modern multi-layer hard coating for maximum service life and optimum chip transport
- High centring accuracy
- **For universal applications**
- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **With internal cooling**
- Shank designs up to Ø 2.9 mm HA, from Ø 3.0 mm HB

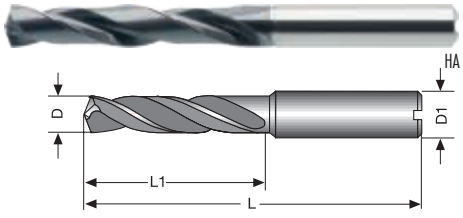
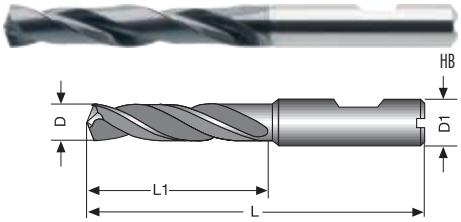
ATORN® TiAlNplus HPC 5D solid carbide high-performance drill bit with internal cooling

VHM | DIN 6537 | Typ U | 140° | 30° | 5xD | DIN 6535 HA | DIN 6535 HB | TiAlN plus | Vc/fz



362



- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **With internal cooling**

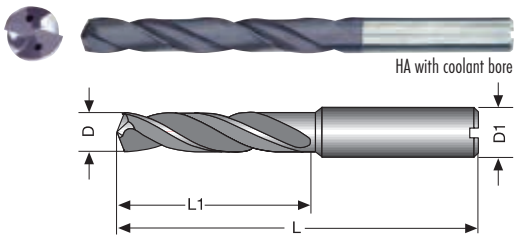
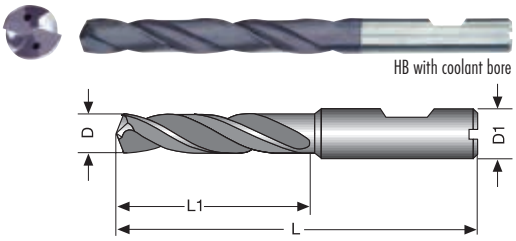
ATORN® SC high-performance drill Ultra-M 5D

VHM | DIN 6537 | Typ VA | 140° | 30° | 5xD | DIN 6535 HA | DIN 6535 HB | TiAlN | Vc/fz | 362



Especially for stainless steel



- Special geometry, facet-ground, maximum tool life, high process reliability
- Shank design:
  HA with coolant bore, smooth straight shank, DIN 6535 HA
  HB with coolant bore straight shank DIN 6535 HB
- **Cutting material: solid carbide, TiAlN-Ultra-M-coated**
- True-running accuracy of the tool when clamped max. 0.02 mm
- **Especially suitable for stainless steel and superalloys**

material — ● very well suited ○ well suited

ADO-SUS-5D solid carbide high-performance drill

VHM | Werks-norm | Typ VA | 140° | 30° | 5xD | DIN 6535 HA | TiAlN | Vc/fz | 368

- **Cutting material: solid carbide, WXL-coated**
- Sharp cutting edges reduce machining-induced material hardenings
- **Short and compact chips thanks to innovative chip flute geometry**
- Friction-reducing protective chamfer reduces heat development
- **New coolant bore design increases coolant flow rate and thus reduces heat generation in the material**
- Excellent coating adhesion of the new WXL coating reduces premature wear and coating spalling

material: ● very well suited ○ well suited

ATORN® Solid carbide high-performance drill bit AluSpeed 5D

VHM | Werks-norm | Typ W | 135° | | 15° | 5xD | DIN 6535 HA | | TiB_2 | Vc/fz | 361

- Twisted cooling channel
- **6-fold guide chamfers, guarantees very high alignment precision and stabilisation of the drill bit**
- **Cutting material: ultra-superfine grain solid carbide K40F, Alu-CC-coated**
- Defined cutting-edge rounding to minimise micro-nicks on the tool cutting edge
- Coolant pressure min. 12 bar

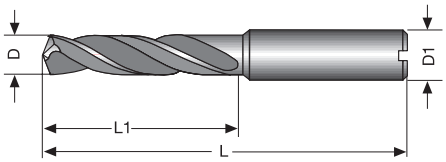
ATORN®
High quality for great performance



ATORN® SC high-performance drill HARD 5D

VHM | Werks-norm | Typ H | 140° | 20° | 5xD | DIN 6535 HA | TiAlSiN | Vc/fz | 361

NEW · NUOVO · NEU · NOUVEAU · NUEVO

Up to 65 HRc

- for machining drill holes up to 65 HRC
- **Cutting material: SC, TiAlSiN coating**
- reinforced core and special point thinning with sharp chisel edge
- no internal coolant supply for increased stability
- **also available in 3xD**
- **Note:** Do not hard drill dry!

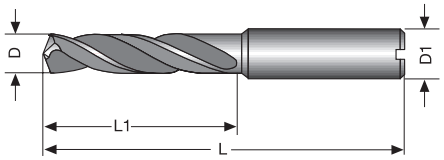
… HPC with internal cooling



ATORN®
High quality for great performance

ATORN® TiAlNplus HPC 8D solid carbide high-performance drill bit with internal cooling

VHM | Werks-norm | Typ U | 140° | 30° | 8xD | DIN 6535 HA | TiAlN plus | Vc/fz | 364

- Optimised shank diameter tolerance for use as a holding fixture in power chucks and hydraulic expansion chucks
- **Cutting material: Solid carbide ultra-fine grain TiAlNplus**
- Efficient drilling in different materials
- Newly developed geometry in conjunction with a customised multilayer coating for enhanced performance
- Special cutting edge finishing reduces micro-nicks and increases service life
- **Excellent alignment precision thanks to 4 guide chamfers**
- High process reliability, even at difficult-to-reach bore depths
- With internal cooling

ATORN® Solid carbide pilot drill bit TiAlNplus HPC

VHM | Werks-norm | Typ PLT | 140° | 30° | 5xD | DIN 6535 HA | TiAlN plus | Vc/fz | 362

- For setting a pilot bore for deep-hole drill bits from 12xD
- **Cutting material: ultra-superfine grain solid carbide TiAlNplus**
- Precision-ground for extreme boring accuracy to meet high dimensional demands
- High guidance accuracy thanks to innovative geometry
- High-performance coating guarantees high cutting data and service life
- The tools are coordinated by geometry and diameter.

ATORN® Solid carbide deep-hole drill bit TiAlNplus HPC 16D

VHM | Werks-norm | Typ TLP | 135° | | 30° | 16xD | DIN 6535 HA | | TiAlN plus | Vc/fz | 365

- High-performance deep-hole drill bit with 4 guide chamfers
- **Cutting material: ultra-superfine grain solid carbide TiAlNplus**
- Excellent all-round properties and precise cutting behaviour with high cutting data
- Unique, extremely tough, smooth, temperature-resistant and close contour TiAlN coating
- Cutting-edge preparation minimises micro-nicks on the tool cutting edge
- Range is coordinated by angle and diameter

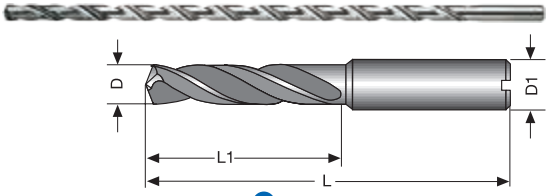
… caused by uneven divisions

ATORN®
High quality for great performance

ATORN® Solid carbide deep-hole drill bit TiAlNplus HPC 25D



VHM | Werks-norm | Typ TLP | 135° | | 30° | 25xD | DIN 6535 HA | | TiAlN plus | Vc/fz | 365

- High-performance deep-hole drill bit with 4 guide chamfers
- **Cutting material: ultra-superfine grain solid carbide TiAlNplus**
- Excellent all-round properties and precise cutting behaviour with high cutting data
- Unique, extremely tough, smooth, temperature-resistant and close contour TiAlN coating
- Cutting-edge preparation minimises micro-nicks on the tool cutting edge
- Range is coordinated by angle and diameter

SC pilot drill ADO-PLT

VHM | Werks-norm | Typ PLT | 160° | 30° | DIN 6535 HA | TiAlN | Vc/fz | 366

- **for positioning a pilot bore for deep-hole drills from 10xD**
- with optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- Optimum chip removal with special cutting geometry and large chip spaces
- True-running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance h8

SC deep-hole drill ADO-10D

VHM | Werks-norm | Typ TLP | 140° | 30° | 10xD | DIN 6535 HA | TiAlN | Vc/fz | 366

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 10xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True-running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance h8

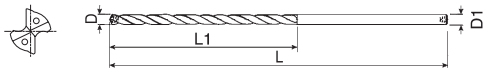
SC deep-hole drill ADO-15D



VHM | Werks-norm | Typ TLP | 140° | 30° | 15xD | DIN 6535 HA | TiAlN | Vc/fz

366

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 15xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance:
  Ø 3mm: -0.005 to -0.024mm
  Ø 3.1-6mm: -0.01 to -0.032mm
  Ø 6.1-10mm: -0.015 to -0.04mm
  Ø 10.1-12mm: -0.02 to -0.05mm

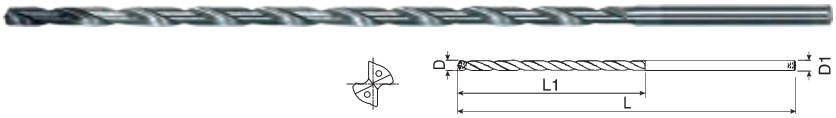
SC deep-hole drill ADO-20D

VHM | Werks-norm | Typ TLP | 140° | 30° | 20xD | DIN 6535 HA | TiAlN | Vc/fz



366

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 20xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance:
  Ø 3mm: -0.005 to -0.024mm
  Ø 3.1-6mm: -0.01 to -0.032mm
  Ø 6.1-10mm: -0.015 to -0.04mm
  Ø 10.1-12mm: -0.02 to -0.05mm

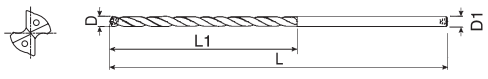
SC deep-hole drill ADO-30D

VHM | Werks-norm | Typ TLP | 140° | 30° | 30xD | DIN 6535 HA | TiAlN | Vc/fz 366



- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 30xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance:
  Ø 3mm: -0.005 to -0.024mm
  Ø 3.5-6mm: -0.01 to -0.032mm
  Ø 6.1-10mm: -0.015 to -0.04mm

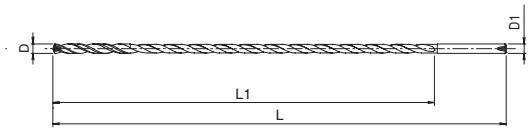
SC deep-hole drill ADO-40D



VHM | Werks-norm | Typ TLP | 140° | 25° | 40xD | DIN 6535 HA | TiAlN | Vc/fz | 366

- With optimised shank diameter tolerance, suitable for use in shrink-fit holders
- **Cutting material: SC EgiAs-coated**
- High-performance drill for cost-efficient manufacturing of deep bores up to 40xD with no step
- Optimum chip removal with special cutting geometry and large chip spaces
- True running accuracy of the tool when clamped: max. 0.02mm
- Cutting edge tolerance e8

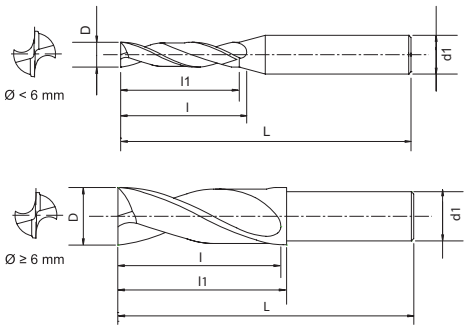
ADF-2D solid carbide flat drill



VHM | Werks-norm | Typ N | 180° | 20° | 2xD | TiAlN | Vc/fz | 368

- Suitable for a variety of applications, such as inclined surfaces, round surfaces, shallow drilling and eccentric drilling etc.
- **Cutting material: solid carbide, EgiAs-coating**
- Outstanding wear resistance thanks to new EgiAs coating
- **Reduced cutting forces thanks to innovative cutting edge geometry**
- Large chip space and adapted point thinning

Long version available on request

material: ● very well suited ○ well suited

ATORN® SC flat drill FLAT 3D with internal cooling

VHM | Werks-norm | Typ N | 180° | 30° | 3xD | DIN 6535 HA | TiAlN | Vc/fz | 365

NEW · NUOVO · NEU · NY · NOUVEAU · NUEVO

- **For producing flat-bottomed holes in one single operation**
- **Facilitates drilling in a single operation on inclined surfaces**
- Improved drilling quality with special cutting and 4-guide chamfer geometry
- Better self-centring

ATORN® SC flat drill FLAT 5D with internal cooling

VHM | Werks-norm | Typ N | 180° | 30° | 5xD | DIN 6535 HA | TiAlN | Vc/fz | 365

- **For producing flat-bottomed holes in a single operation**
- **facilitates drilling in a single operation on inclined surfaces**
- Improved drilling quality with special cutting and 4-guide chamfer geometry
- better self-centring

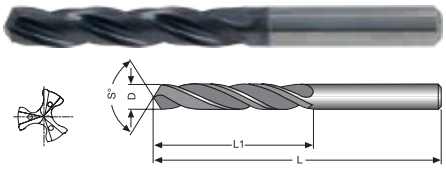
... solid carbide indexable insert drill.

ATORN®
Performance demands quality



ATORN® SC high-performance drill HIGH FEED 5D

VHM | Werks-norm | 135° | 30° | 5xD | DIN 6535 HA | Z 3 | TiAlN | Vc/fz | 367

- **3-edged drill for high feed rate**
- **Cutting material: Ultra micro-grain SC TiAlNplus**
- **special HFD point thinning reduces cutting forces and generates short chip breaking**
- large chip spaces allow good chip removal
- optimum centring characteristics

for high feed rate

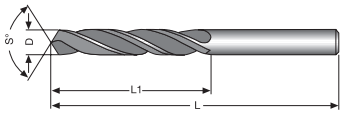
ATORN® Solid carbide drill, 3-edged



VHM | DIN 6539 | Typ N | 150° | 28° | 5xD | Z 3 | TiN | Vc/fz 367

- 3 cutting edges, with wider flutes
- **For precisely positioned and shaped bores in solid material**
- Very good self-centring
- Very good bore surfaces

3 cutting edges

TiN-coated

Uncoated

ATORN® Solid carbide drill reamers

VHM | Werks-norm | Typ N | 140° | 30° | 5xD | DIN 6535 HA | Z 2 | TiAlN | Vc/fz | 367

Drilling and reaming in one work step

- **Drilling and reaming in one operation**
- Reduced machining and auxiliary processing times
- Production of bores in **tolerance zone H7**
- 2 boring inserts and 4 reaming inserts for high surface quality, dimensional stability and true-running accuracy

ATORN® Solid carbide short step drill bit

VHM | Werks-norm | 140° | DIN 6535 HA | TiAlN | Vc/fz | 369

- ∅ tolerance h8
- **Cutting material: solid carbide, TiAlN-coated**
- For economical bore and countersink production in one operation
- Tight concentricity tolerance for precise alignment
- **Especially suitable for NC machines and automatic units**
- **Note:** The cutting speed is determined by the large diameter, while the feed rate is determined by the small diameter

ATORN® ETD 840 indexable insert drill bit

3xD | 5xD | 7xD | Vc/fz | 374

- **Drilling in the 8.0 - 40.0 mm diameter range**
- **Innovative cutting edge geometry**
- **Up to 10xD and Ø 50 mm available on request**
- Made from high-strength, heat-resistant powdered metal
- Polished chip chambers for low-vibration, reliable chip removal
- **Indexable inserts available from the manufacturer in 0.1 mm diameter increments**
- High bore surface quality and precision
- **Coated bodies for increased wear-resistance available on request**

VHM | 130° | TiAlN | Vc/fz | 374

- **innovative, efficient cutting edge geometry**
- Precision-ground
- **Adapted to tool holder**
- Excellent wear-resistance and cutting properties
- **All intermediate dimensions available in 0.1 mm increments**

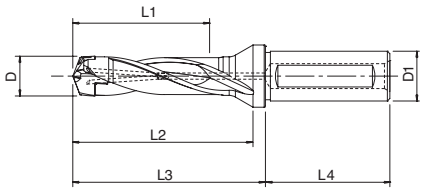
Replaceable head drill PXD



375

- **Drilling in diameter range 14 - 25.4mm**
- special cutting geometry for larger diameters
- internal coolant supply
- **bayonet system for safe and fast boring head change**
- high bore surface quality and precision
- polished chip chambers for low-vibration and reliable chip removal
- **Supplied with chuck key**

Modular drilling systems

INFO

Modular drills from Allied Machine & Engineering Co. (AMEC) meet the increasing demands of customers from various industries. Solutions are provided not only for general mechanical engineering, but also for the automotive sector and aerospace technology. The flexible drill systems are characterised by their universal application capabilities and in particular by the combination of cutting materials, coatings and geometries.

Guaranteed application

Describe your machining problem to us. Working with the manufacturer, we will draw up a quotation for you for the use of appropriate tools. Allied Machine Engineering Co. guarantees the feasibility of the project.

GEN2 T-A® and T-A® Original

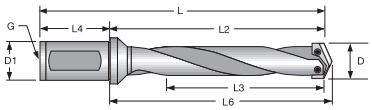
- Diameter range 9.50 – 160.00 mm
- Various geometries, base substrates and coatings available
- Exchangeable cutting inserts reduce regrinding work
- 1.5 x D to 32 x D in the AMEC standard range

GEN3SYS® XT Pro

- Diameter range 11.00 to 35.00 mm
- Geometries and base materials for machining steel, stainless steel, cast iron and non-ferrous metals
- New coating for extended service life
- to 20% higher cutting speeds
- Up to 10 x D in the AMEC standard range

You can find the entire range in the Allied Maxcut special catalogue. Request your free copy now!

Drilling system T-A® Series Y



370
371

- **Internal coolant supply** (* holders also have a 1/8 inch coolant supply connection on the side)
- Also available in MT version

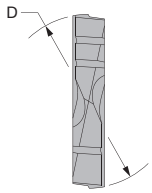
Cutting inserts T-A® Original



HSS TiN TiCN Vc/fz 370 372

- **Diameter 9.5 - 65mm**
- suitable for carrier tools T-A® Original, series Y to 4
- **Cutting material: HSS Super Cobalt, TiN/TiCN-coated**
- Universal geometry with a wide range of applications
- **Recommendation:** TiCN variant for applications in stainless steel

Cutting inserts T-A® Original Flat Bottom 180°

HSS TiN Vc/fz 370 372

- **Diameter 9.5-65 mm**
- **For producing a flat-bottomed bore in existing bore**
- Suitable for carrier tools T-A® Original, series Y to 4
- Also suitable for flat countersinks (only with short holder)
- **Cutting material: HSS Super Cobalt, TiN-coated**

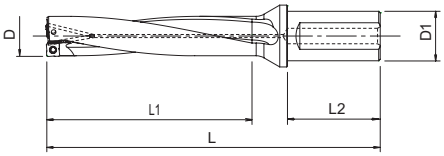
Indexable inserts solid drill bits PHOENIX PD

Werks-norm | 2xD | 3xD | 4xD | 5xD | Vc/fz 376

Range expanded



- Optimised substrate geometry for increased stability, improved chip removal and reduced cutting forces
- **Available in tool lengths of 2xD, 3xD, 4xD and 5xD**
- **Diameter 12-63mm**
- **Wide range of applications in steel, stainless steel, cast iron and aluminium materials**
- Short chips due to additional chip breaker in the chip flute
- **High efficiency thanks to 4 effective cutting edges per indexable insert**
- Same indexable insert can be used as centre and periphery plate
- **With internal coolant supply**
- **Please note:** Supplied without chuck key (Torx-Plus), please order separately!

palbit Indexable inserts - solid drill bits SCS 3D/4D

382

- Surface-hardened carrier tools
- **Available tool lengths of 3xD and 4xD**
- **Diameter 13-50 mm**
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- **Suitable indexable cutting inserts SPKX**

SCS 3D - 3xD

- Bore tolerances: ∅ 13-21.5 mm > -0.1/+0.15 mm; ∅ 22-50 mm > -0.12/+0.2 mm

palbit Indexable inserts - solid drill bits with cartridge system SCC 3D/4D

3xD 4xD Vc/fz 382

- Surface-hardened carrier tools
- **Available tool lengths of 3xD and 4xD**
- **Diameter 50-80 mm**
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications
- Good chip control and reduced cutting forces
- **Suitable indexable cutting inserts SPKX**
- Supplied with inner and outer cartridge

palbit Indexable cutting inserts SPKX

- Carbide indexable cutting inserts, positive 11°
- **PH6920** PVD-coated (TiAlN)
  Fine grain carbide for universal applications, good toughness and wear resistance
- **PH6930** PVD-coated (TiAlN)
  Superfine grain carbide for applications under unstable machine conditions at moderate cutting speeds
- **PHC930** PVD-coated (TiAlN+TiN)
  Fine grain carbide for universal applications at high cutting speeds

palbit Indexable inserts - solid drill bits TDS 3D

379

- Surface-hardened carrier tools
- **Drilling depths up to 3xD**
- **Diameter 13-58 mm**
- Soft cutting for lower power requirement
- Optimised chip space geometry and cutting edge positions for stable drilling
- Wide range of applications in structural steel and stainless steels
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- Bore tolerances:
  Ø 13-21.5 mm > -0.1/+0.15 mm; Ø 22-50 mm > -0.12/+0.2 mm; Ø 50-58 mm > -0.15/+0.25 mm

palbit Indexable inserts - solid drill bits with cartridge system TDC 3D

3xD Vc/fz 379

- Surface-hardened carrier tools
- **Drilling depths up to 3xD**
- **Diameter 59-80 mm**
- Soft cutting for lower power requirement
- Wide range of applications in structural steel and stainless steels
- Good chip control and reduced cutting forces
- **With internal coolant supply**
- **Suitable indexable cutting inserts WCKX**
- Supplied with inner and outer cartridge

palbit Indexable cutting inserts WCKX

- Carbide indexable cutting inserts, positive 7°
- **PH6920** - PVD-coated (TiAlN) fine grain carbide for universal applications. Good toughness and wear resistance.
- **PH6930** - PVD-coated (TiAlN) superfine grain carbide for applications under unstable machine conditions at average cutting speeds.
- **Recommendation:** Chip breaker LC specially designed for machining low-carbon steels

palbit Indexable inserts drilling system VORTEX DRILL

10xD Vc/fz 387

- **Machining of bore holes from Ø 45 to 180 mm**
- Drilling in a single work step without centring and pre-drilling
- The modular design allows efficient use through possible diameter bridging of up to 10 mm.
- Variable drilling depths of up to 10 x D due to holder system with pluggable extensions
- **Internal coolant supply**
- **Suitable indexable cutting inserts WCKX**
- Supplied with inner and outer cartridge

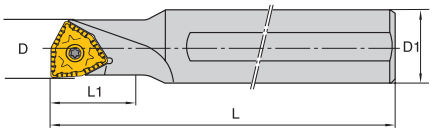
ATORN® Universal Drilling and Turning Tool

391

NEW · NUOVO · NEU · NOUVEAU · NUEVO

3 cutting edges per indexable insert



- **with internal cooling**
- **series and single-item production for facing and longitudinal turning, drilling, countersinking and chamfering**
- Optimises process costs: up to 30% reduced tooling times
- Solves the problem of tool location shortages
- wide range of holders and indexable inserts for a variety of materials
- Minimises tool costs: **one tool for 5 machining methods**

Right-hand version

- Solid carbide indexable cutting inserts **WCHX** for facing and longitudinal turning, drilling, countersinking and chamfering
- **HW7310** uncoated
  innovative cutting edge geometry with extremely sharp cutting edges for reliable machining of non-ferrous metals
  very hard substrate for long service lives
  very good chip breaking thanks to chip breaker
- **HC7625** coated (TiN)
  universal and reliable use in steel and stainless steel
  excellent combination of wear resistance and toughness
- **HC7535** coated (TiAlN)
  universal and reliable use in steel and stainless steel with increased impact loads
  optimised for machining in unfavourable cutting conditions

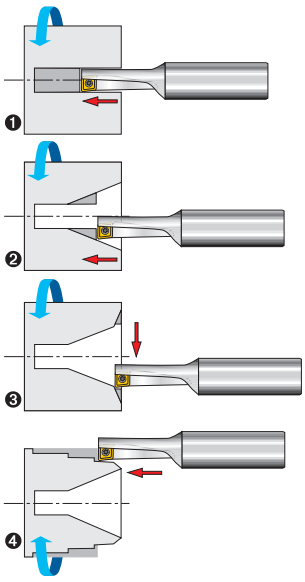
SARA® SARAcut 2.0 drilling and turning tool

392

Range expanded



- **Drilling and turning with one tool**
- **Multifunctional:**
  Solid drilling with a level-bottomed drill hole (Drawing 1)
  Turning internal contours (Drawing 2)
  Turning of flat contours (Drawing 3)
  Turning external contours (Drawing 4)
  (Note change of rotational direction)
- Reduced storage of tools and indexable inserts, as well as reduced tooling times
- Reduction of tool costs
- Reduced programming effort and expense
- **Solves the problem of tool location shortages**

ATORN® Core and countersink drill

h6 | DIN 1835 B | Z 1 | Z 2

Range expanded

- **With internal cooling**
- For countersinking and drilling
- Counterbores for producing countersinks for cylinder head screws, countersinks, sealing surfaces
- Fixed dimension spiral countersink for drilling pre-machined or cast bores
- **The diameter to be drilled must not be smaller than dimension A!**
- **Bore tolerances:** For countersinks according to DIN 74 (H13)
- For ISO indexable inserts, please refer to the "Turning" section

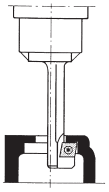
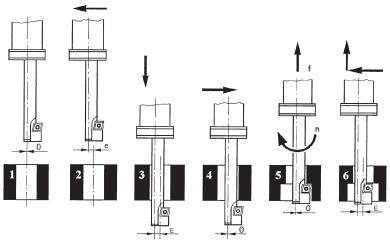
ATORN® 180° reverse countersink



398

- For rotating use with stationary workpieces
- **For ISO indexable cutting inserts (CPMT or CCM and CCG)**
- With internal cooling, (Ø15 and Ø18 without internal cooling)
- Straight shank with clamping surface (Whistle notch)
- D5 = maximum countersink diameter



1. Positioning: pay attention to the cutting edge position!
2. Move from the centre to the cutting edge opposite "E".
3. Move eccentrically through the bore.
4. Move back to the centre.
5. Reverse countersink with speed "N" and feed "F".
6. Move from the centre to the cutting edge opposite "E" and retract from the hole.

D = max. achievable diameter

SARA SARADRILL solid drilling tool

HSS-E PM | 15xD | TiN | Vc/fz | 374

- **Machining of bore holes from Ø 49 to 270 mm**
- **For machines with low drive power**
- Low-vibration, equipment-friendly machining with up to 50 % less drive power
- Drilling in a single operation without centring and pre-drilling
- No front face planing required
- Cost-efficient boring system, since differences in diameter of up to 30 mm can be machined with one boring head by changing the cutting edges
- Variable drilling depths of up to 15 x D due to holding fixture system with pluggable extensions
- Internal coolant supply directly to the cutting edge, no high-pressure pump required
- For rotating tools, the coolant is supplied via a coolant ring
- Short chips due to chip-separating grooves in the roughing blade, no chip removal, even with extremely deep bores
- Also for use on vertically operating machines
- Low tool costs as wear is limited to the cutting edges and centre bit
- Unproblematic regrinding of the centre bit and the cutting edges (in pairs) using the grinding fixture or the tool grinding machine
- **Cutting material:**
  Cutting edge **HSS-E-PM ASP30, ASP30 TiN**
  HSS centre bit
- For use on all machine tools as a rotating or stationary tool especially for machining large bore diameters on machines with low drive power
- **Caution:** Not suitable for boring out existing holes!

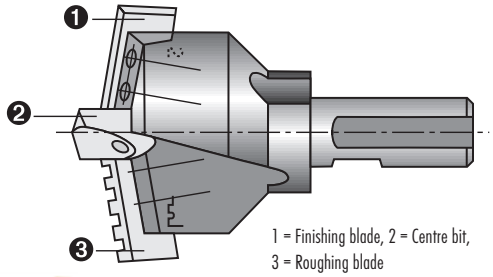
Drilling with 100 mm diameter into solid material with just 5 KW of drive power?

Use *SARADRILL* of course

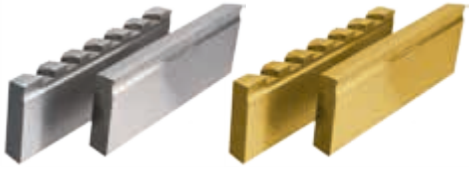
Working example of a user of ***SARADrill***

Workpiece: Compression cylinder
Material: 1.7225, 42CrMo4V
Hole: Diameter 100 mm, depth 200 mm
Machine: Milling machine
Feed rate f: 0.18 mm/rev
Cutting speed Vc: 18 m/min



Drive power: approx. 4.5 KW

Result: 65% savings in working time



SARADRILL cutting edge

- **For SARADRILL** solid drilling tools
- The cutting edges are delivered in pairs, i.e. 1 roughing blade and 1 finishing blade.
- **Note for machining blind holes:**
  The finishing blade can be adjusted from 3 to 10 mm, depending on the size of the drill head, to machine intermediate dimensions. (Not permissible for machining through-holes!)
- **Caution: The cutting edges may only be replaced in pairs to prevent the risk of breakage!**
- Prices per pair (1 roughing blade and 1 finishing blade)

1 = Finishing blade, 2 = Centre bit, 3 = Roughing blade

ATORN® The ISO colour ring system

ATORN taps and thread formers are marked with coloured rings in accordance with the ISO colour code according to their **main area of use**. The respective secondary applications are specified in the catalogue.

Steel up to 1,000 N/mm²

Stainless steel

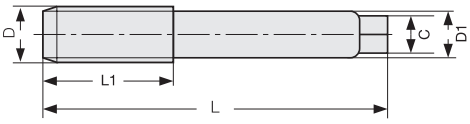
GG, GGG

Aluminium and copper alloys, long-chipping materials

Titanium and nickel alloys

Hard steel up to 62 HRc

Steel | **up to 1,400 N/mm²**



Steel | **Stainless steel**

ATORN® SARA® Hand taps

M | 60° | HSS | DIN 352 | ISO 2 6H

- **ISO metric thread, DIN 13**
- **Cutting material: HSS**
- For through-hole and blind bore threads
- 3 pcs set comprising taper tap, second tap and bottom tap

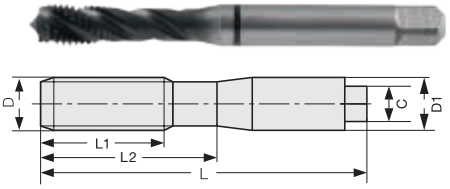
ATORN® Universal machine tap ULTRA-HL

M | 60° | HSS-E | HSS-E PM | DIN 371 | DIN 376 | ISO 2 6H | C 2-3 | 40° | 2xD | TiAlN | Vc/fz | 392



- **ISO 6H metric thread**
- 40°, spiral-fluted
- Type C, 2-3 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material HSS-E, HSS-E-PM, Hardlube coating**
- Easy chip removal to the rear
- Possible thread depth 2xD
- **BALINIT® HARDLUBE**: The high level of hardness and temperature resistance of the TiAlN layer effectively protects cutting edges from wear, while the excellent sliding and lubricating properties of the WC/C ensure smooth chip flow. The result: Greater production reliability thanks to reliable, reproducible performance.

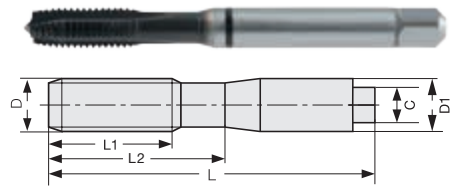
ATORN® Universal machine tap ULTRA-HL

M | 60° | HSS-E | HSS-E PM | DIN 371 | DIN 376 | ISO 2 6H | B 3,5-5 | 3xD | TiAlN | Vc/fz | 392



- **ISO 6H metric thread**
- Straight-fluted with spiral point
- Type B, 3.5-5 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material HSS-E, HSS-E-PM, Hardlube coating**
- For through-hole threads
- Possible thread depth 3 x D
- **BALINIT® HARDLUBE**: The high level of hardness and temperature resistance of the TiAlN layer effectively protects cutting edges from wear, while the excellent sliding and lubricating properties of the WC/C ensure smooth chip flow. The result: Greater production reliability thanks to reliable, reproducible performance.

BALINIT® HARDLUBE

ATORN® Synchronised machine tap set

M | 60° | HSS-E PM | DIN 371/376 | ISO 2 6HX | Synchro | C 2-3 | 50° | 2,5xD | TiN | Vc/fz | 392

- **ISO 6HX metric thread**
- 50°, spiral-fluted
- Type C, 2-3 thread chamfer
- DIN 371 construction dimensions = up to M10, DIN 376 = from M12
- **Cutting material: HSS-E-PM, TiN-coated**
- For blind-hole threads
- Possible thread depth 2.5 x D
- **Minimum-sized guide piece and extremely large clearance angle**
- Shank tolerance = h6
- For synchronous tap chucks

CC-SFT machine tap

M | 60° | HSS-E V3 | DIN 371 | DIN 376 | ISO 2 6HX | C 2,5 | 45° | 3xD | CrN | Vc/fz | 392

- **ISO 6HX metric thread**
- **For stainless steel, aluminium and steel**
- Controllable chips
- For better thread surfaces
- Low machining temperature
- Improved service life
- **For blind bore threads up to 3xD**
- 45°, spiral-fluted
- Type C, 2.5-thread chamfer
- **Material: HSS-E V3, CrN-coated**
- UNC, UNF and Whitworth thread taps available on request

Chips from a conventional tap

Chips from the CC-SFT

S-SFT machine tap

MF | 60° | HSS-E | DIN 374 | ISO 2 6H | C 2,5 | 40° | 2,5xD | Vap. | Vc/fz | 392

Accelerated chip removal due to unequally twisted flute

- **Metric ISO 6H fine thread**
- 40°, spiral-fluted
- Form C, 2.5-thread chamfer
- **Cutting material: HSS-E, vapour-treated**
- For blind-hole threads

material: ● very well suited ○ well suited

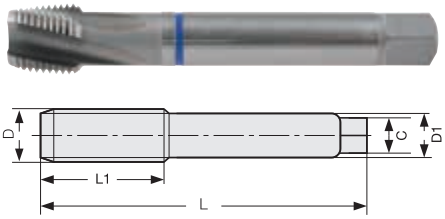
ATORN® Machine tap, weak-spiralled

G | 55° | HSS-E | DIN 5156 | C 2-3 | 15° | 1,5xD | | i Vc/fz | 392



- **Whitworth pipe thread, 55°**
- 15°, right-hand, spiral-fluted
- Form C, 2-3 thread chamfer
- **Cutting material: HSS-E**
- For blind-hole threads
- Easy chip removal to the rear
- Possible thread depth 1.5 x D
- Suitable for conventional machining with quick-action chuck
- **Note:** for DIN-ISO 228/1 straight pipe threads

Up to 1000 N/mm²

THERMDRILL® Thermal drill bits (flow drill)

396

For a lower wall thickness, often only 1-2 threads can be inserted. These are generally not sufficient for a load-bearing thread. With the THERMDRILL process, you can create extremely stable thread bushes in seconds in only two steps. Protected against rotation and resistant to vibrations. Ideal for thin-walled sheet steel, pipes and profiles as the thread bushes are produced as if from one cast.

- **Wobbling, loosening or rotating (as with rivet nuts) no longer possible**
- Additional inserts no longer required
- **Especially suitable for round tubes**
- **Secure hold even in sheet metal and hollow profiles**
- No waste, chip-free process by using friction heat
- Better quality thread due to shaped instead of cut thread (material reinforcement)
- **Long service life of tools thanks to polygon-ground solid carbide**

Basic equipment

- Incl. ER32 - Ø 6, 8 and 10 mm collets

SARA® Machine tap extensions

- **Threading in workpieces with extremely deep female threads or for threading directly along cast walls, edges, interfering edges of equipment etc.**
- **Versions:**
  138002.... Straight shank
  138003.... Straight shank with internal cooling (IC)
  138005.... Straight shank with Weldon clamping surface, shank tolerance h6
- The front end of the extension is designed as a collet. Tightening a knurled clamping nut will clamp the collet and/or the tap. Torque is transferred via the square end. The rear end of the extension is DIN-compliant so that the tap extensions can be clamped in quick-change inserts just like taps or other thread-cutting equipment.
- **Special dimensions available on request**
- For use on CNC machines and traditional threading attachments
- No cost-intensive taps with special lengths
- No spare parts required
- The extension and standard tap combination is precise and easy to handle

Standard version

Straight shank

BECK MAPAL GROUP | Taper and deburring countersink EUC-Speed 60°

HSS | Werks-norm | 60° | Z 3 | ZrN | Vc/fz | 397

- Geometry with very unequal pitch (EU pitch)
- **High degree of smoothness**
- Prepared cutting edges
- Radially relief-ground
- **Reduced axial and radial forces**
- **Low vibration tendency**
- Special coating
- **Versions:**
  150174 - with straight shank tolerance h9
  150175 - with 3 clamping surfaces on the shank to stop rotation of the countersink in the drill chuck with optimum torque transfer

Very unequal pitch

Optimised countersink

Straight shank

3-face shank

ATORN® Taper and deburring countersinks

VHM | Werks-norm | 60° | Z 3 | Vc/fz | 398

- 3 cutting edges, radially relief-ground
- Shank tolerance h9
- Straight shank
- **Cutting material: solid carbide**
- Design: Ø 8 mm in solid carbide, Ø 10 - 25 mm solid carbide head and soldered shank
- We recommend the carbide version for machining solid steels.

Smooth countersinks, high endurance

SARA® ADVANCED taper and deburring countersinks

HSS | DIN 335C | 90° | Z 3 | TiN | i Vc/fz | 397

- 3 cutting edges
- **HSS and HSS TiN cutting material**
- New cutting edge geometry prevents uneven wear of the cutting edges
- High degree of wear resistance and hot hardness for maximum service life
- High true running accuracy with considerably reduced force application
- **Patented shank to stop rotation of the countersink in the drill chuck with optimum torque transfer** (from ∅ 8.3 mm)

Patented shank and irregular pitch

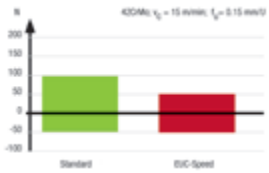
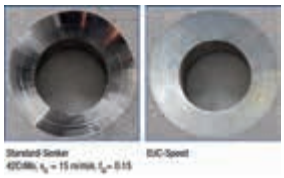
BECK MAPAL GROUP | Taper and deburring countersink EUC-Speed 90°



HSS | VHM | DIN 335C | Werks-norm | 90° | Z 3 | ZrN | Vc/fz

397
398

- Geometry with very unequal pitch (EU pitch)
- **High degree of smoothness**
- Precision design
- Prepared cutting edges
- Radially relief-ground
- **Reduced axial and radial forces**
- **Low vibration tendency**
- Special coating
- **Shank tolerances:**
  HSS h9
  Solid carbide h6 (suitable for hydraulic expansion and shrink fit chucks)
- **Versions:**
  150170 - HSS with straight shank, Tolerance h9
  150171 - Solid carbide, Tolerance h6 (suitable for hydraulic expansion and shrink fit chucks)
  150172 - HSS with 3 clamping surfaces on the shank to stop rotation of the countersink in the drill chuck with optimum torque transfer
  150173 - HSS with extended straight shank, Tolerance h9



50% reduced axial force

25% reduced radial force

very unequal pitch

optimised countersink

GRANLUND Tools Combination counterbores

HSS | Werks-norm | 22° | Z 4

- Just 3 holder sizes required to cover a countersink range of 7 - 66 mm (on request up to 84 mm).
- Any countersink and pilot pin combination possible within the same holder size.
- Tight bore and shank tolerances ensure a high degree of true-running accuracy.
- Countersink and pin are fastened quickly and securely with just one screw. An additional stud safety catch prevents countersinks from twisting.
- Combine elements to produce countersinks for DIN screws and to machine stepped bores or non-standard countersinks
- 4 cutting edges

ATORN® Hand reamers

HSS | DIN 206 | H7 | 6°

- **Type B for H7 fit**
- Right-hand cutting, manufacturing tolerances in accordance with DIN 1420
- Spiral-fluted, long chamfer along 1/4 of the cutting edge length
- Even ridge count with irregular pitch for chatter-free bore reaming
- Straight shank and square end
- **Cutting material: HSS**
- For reaming through-holes

- Right-hand cutting, 4 cutting edges
- Straight shank and square end
- Large adjusting range, fine adjustment with ring gauges or micrometre
- **Cutting material: HSS**
- For repair work that does not require narrow fit tolerances, and for intermediate dimensions

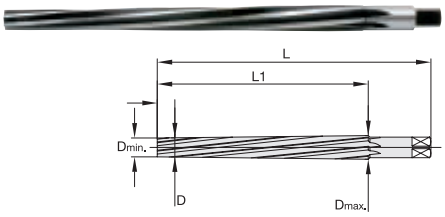
ATORN® Hand taper reamers

HSS | DIN 9 | 1:50 | 6°



- 1:50 taper for taper pins
- **Type A**, straight-fluted
- **Type B**, spiral-fluted, 6° left-hand twist
- Shank design: straight with square end
- For taper pins in accordance with DIN EN 22339, DIN 258, DIN EN 28737 and DIN EN 28736
- For output bores, we recommend conical pin-hole drill bit no. 101025....
- Ø 13 mm and Ø 14 mm, non-DIN
- * These dimensions are not included in the standard

ATORN® High helix taper reamers

HSS-E | DIN 2179 | 1:50 | 45° | Vc/fz | 398

- Taper 1:50 for taper pins
- Shank design: straight with driving pin lugs in accordance with DIN 1809
- For taper pins in accordance with DIN EN 22339, DIN 258, DIN EN 28737 and DIN EN 28736
- Spiral-fluted, 45° left-hand twist
- For through-holes
- For output bores, we recommend the conical drill bit for pin holes No. 101025....
- Requires extensive chip removal (do not pre-drill too deep)
- **Cutting material: HSS-E**
- Ø 6.5, 13, 14, 16 and Ø 20 mm, non-DIN

ATORN®
High quality for great performance

SARA® Taper bridge reamers

HSS | DIN 311 | 25° | Vc/fz | 397

- Right-hand cutting
- Cutting edge lengths 1/3 tapered, 2/3 straight
- Shank design: MT
- Spiral-fluted, 25° left-hand twist
- **Cutting material: HSS**
- Used for reaming bores that are too small or offset

... for daily use.

ATORN®
Performance demands quality

ATORN® NC machine reamers

HSS-E | DIN 212 | Werks-norm | H7 | 9° | Vc/fz | 399

- **For H7 fit**
- Right-hand cutting
- **Cutting material: HSS-E**
- Straight shank without square end
- Form D: spiral-fluted with offset shank
- **To ensure maximum true running accuracy for use in hydraulic expansion chucks** and high-precision chucks, these reamers are delivered with **even shank diameters** suitable
- for reaming through-holes and blind holes
- **Also available in TiN-coated version**

ATORN® High helix machine reamers

HSS-E | DIN 212 | H7 | 45° | Vc/fz | 399

- **For H7 fit**
- Right-hand cutting
- 45° left-hand twist, type E
- Straight shank
- With tapered chamfer along approx. 1/6 of the cutting edge length
- For **through-holes**
- Clean, chatter-free surface
- Broad chip spaces for high cutting speeds and up to 100 % higher feed rates
- **Cutting material: HSS-E**

BECK MAPAL GROUP | High-performance reamers HNC ecoSpeed

HSS-E | Werks-norm | H7 | DIN 6535 HA | TiAlN | Vc/fz | 401

- **Diameter 6-40 mm**
- Manufacturing tolerances H7
- **Cutting material: HSS, TiAlN-coated**
- NC shank for use directly in hydraulic expansion chucks and high-precision collet chucks
- Tight h6 tool shank tolerance for a high level of true running accuracy
- **With internal coolant supply:**
  Straight-fluted version, coolant discharged on the face side, for blind holes
  Straight-fluted version, coolant discharged on the cutting edges, for blind holes

With internal cooling

ATORN® Machine reamer with MT shank

HSS-E | DIN 208 | Werks-norm | H7 | 9° | 10° | Vc/fz | 399

- **Type B for H7 fit**
- Right-hand cutting
- **Morse taper**
- Spiral-fluted, short 45° chamfer
- Even ridge count with irregular pitch for chatter-free bore reaming
- **Cutting material: HSS-E**
- For reaming through-holes, chip removal in the cutting direction, suitable for blind bores due to short chamfer

ATORN® Machine reamers

VHM | Werks-norm | H7 | 9° | Vc/fz | 399

- **sim. to DIN 212/8093 for H7 fit**
- Straight shank, from Ø 10.0 mm steel shank with inner centring in accordance with DIN 332 Type B
- **Left-hand twist, type B**, 45° chamfer
- Up to Ø 2.6 mm with external line-up clamp, from Ø 2.7 mm with inner centring
- **Cutting material: solid carbide K10**
- For reaming cast iron, white iron, malleable cast iron, cast steel, steel, non-ferrous metal and plastics
- For through-holes

SARA® 1/100 solid carbide machine reamers

VHM | Werks-norm | 10° | Vc/fz | 399

- **sim. to DIN 212**
- **Type B, type D from Ø 3.76 mm**
- 10° left-hand twist, right-hand cutting, straight shank
- **1/100 pitch**
- **Tolerances:**
  Ø 0.60 to 3.00 mm +0/+ 0.003
  Ø 3.01 to 6.00 mm +0/+ 0.004
  Ø 6.01 to 13.05 mm +0/+ 0.005
- **Cutting material: solid carbide K15F (Ø > 13.97 with carbide head)**
- For through-holes

SARA® Solid carbide high-performance reamers

VHM | Werks-norm | H7 | 10° | DIN 6535 HA | TiAlN | Vc/fz | 401

- **Manufacturing tolerances: H7 in accordance with DIN 1420**
- Right-hand cutting, **with internal cooling**
- **Cutting material: solid carbide, TiAlN-coated**
- NC shank for use directly in hydraulic expansion chucks and high-precision collet chucks
- Tight h6 tool shank tolerance for a high level of true running accuracy
- Version with linear flutes, coolant exits on the face side, for blind holes
- Version with 10° left-hand twist, lateral coolant outlet on the cutting edges, for through-holes
- **Other versions for machining stainless steels, aluminium, copper, zinc and Cu/Zn/Mg alloys, as well as hardened steels up to 65 HRc available on request**

ATORN® High-performance exchangeable head reamers

VHM | Werks-norm | H7 | TiAlN | Vc/fz | 402

- Modular reaming tool system
- **Diameter 10-40 mm**
- **For through-holes and blind bores**
- **Cutting material: solid carbide, TiAlN-coated**
- **With internal coolant supply**
- Particularly efficient from machining diameters of 20 mm
- Flexible machining depths thanks to various holder lengths
- Faster and more secure tool changes without new tool calibration
- **2 geometries available:**
  ST - for steel and cast iron (ISO P, K)
  VA - for stainless steels (ISO M)
- **Other designs for the efficient machining of aluminium, titanium, CFRP/GFRP, and hardened materials available on request**

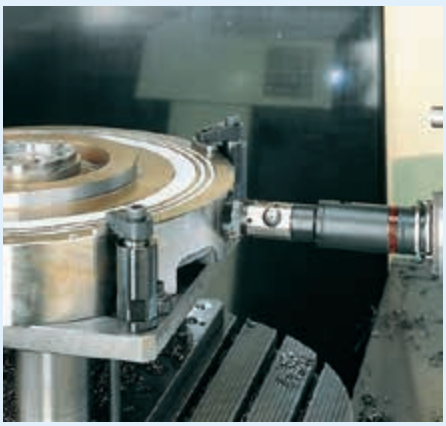
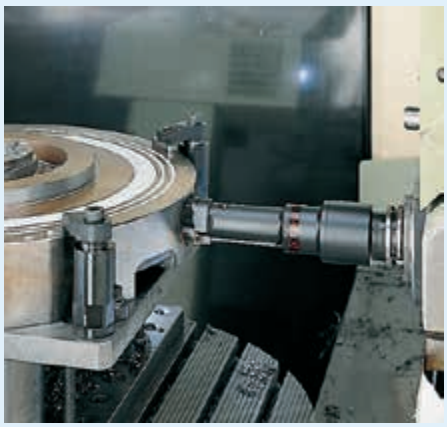
D'ANDREA® MHD modular tool system

- Modular tool holder system for **line boring, milling, drilling, thread cutting**
- Rigid high-precision system, developed and manufactured with state-of-the-art design engineering and production resources based on decades of experience
- A system of extreme flexibility and simplicity for machine tools, machining centres and flexible production facilities.



- For machining with very strict tolerances with a high-grade surface finish
- Patented cylindrical/conical coupling and radial expansion bolts to ensure maximum rigidity and concentricity during boring and milling work
- Internal coolant supply in all elements



- Available in eight sizes, which allows full interchangeability

D'ANDREA® MHD base holding fixtures

- **Case-hardened steel, hardened and ground to tolerance AT3.**
- ISO 40 taper recommended exclusively for sizes MHD-50 and MHD-63
- For heavy milling work and bores with a depth of more than 250 mm and greater than 125 mm in Ø, an MHD-80 base holding fixture should be used.
- Base holding fixtures in special designs or with **planar support** are available **on request**.

D'ANDREA® MHD reducers RD

- Reducers permit the use of elements for smaller MHD sizes.
- This makes the MHD system even more flexible.
- Greater rigidity is achieved by using smaller MHD tools in larger holding fixtures.

D'ANDREA® MHD micrometric boring bar system

403

- TRM boring heads and micrometric boring bars ensure a tolerance of IT6 with an optimum surface finish quality.
- Settings with a radial correction of 1µm can easily be read off the Vernier scale and executed directly on the machine.

osborn Novoflex-B honing tool

- Robust, self-centring honing tool for smooth grinding processes
- Flexible brush design ensures ideal adjustment of the abrasive balls to the surface
- For chamfering and finishing
- Can also be used in non-circular bores
- For use on hand-held drills, honing machines and automatic machines
- For a uniform, fine-ground surface
- Silicon carbide, SiC
- Recommended speed: 350 to 700 rpm

osborn End brush with grinding bristles

- For machining workpiece contours
- Silicon carbide
- Design adapts ideally to the contours of the workpiece without causing significant changes to the surface
- Continuous abrasion capacity
- Shank diameter 6 mm
- For cleaning, smoothing, deburring
- Unit prices when purchased in packs

osborn Cylindrical tube brush with grinding bristles

- For internal machining of bores and finishing non-ferrous metals, steel and cast-iron parts
- Silicon carbide, SiC
- Particularly suitable for deburring transverse bores, control components, O-ring recesses and straight bores
- We recommend bristles that are 10 - 15 % wider than the bore
- For cleaning, smoothing, deburring
- Unit prices when purchased in packs

osborn HELITUF® interior brush

- Particularly suitable for cleaning and deburring threaded bores
- Also for brushing edges and longitudinal recesses e.g. for keyways
- Twist-fastened, crimped genuine OSBORN wire, Ø 0.13 mm
- **HELITUF**® brushes are very dense internal brushes for mechanical and manual use
- For cleaning, deburring, brushing
- Unit prices when purchased in packs

Individual

- Dimension D refers to the bore diameter

EX-SUS-GDS/GDR Twist drill bit

- Please adjust these guideline values according to clamping operation and machine set-up!
- Cutting data for application with coolant and for drilling depths up to 3 x D

114045.... **114050....**

Cutting speed correction factor:
Drilling depth 4 x D = 0.9
5 x D = 0.8
6 x D = 0.8

HSS core drill bit

- Please adjust these guideline values according to manufacturer specifications, clamping operation and machine set-up.

100601.... **100602....**

Cooling with air, drilling emulsion or cutting oil

	Unalloyed steel Up to 700 N/mm²	Alloyed steel, stainless steels Up to 1000 N/mm²	Aluminium alloy
Cutting speed Vc m/min	30	20	30

HSS cutting inserts, Series Y to 2

- Please adjust these guideline values according to manufacturer specifications, clamping operation and machine set-up!
- As starting values, we recommend reducing the specified cutting data by 20%.

- **Note:** The recommended cutting speeds for AM200-coated cutting inserts are based on a rule of thumb of data and apply under optimum conditions. In many applications the optimum conditions are not present. Thus it is necessary to adapt the cutting speed to the respective circumstances. We are happy to provide technical support for your specific application.

Formulae:

Rotational speed:

$$n = \frac{Vc \times 1000}{\pi \times D} \quad (rpm)$$

Cutting speed:

$$Vc = \frac{n \times \pi \times D}{1000} \quad (m/min)$$

Feed rate:

$$V_f = f \times n \quad (mm/min)$$

In many applications the optimum conditions are not present. Thus it is necessary to adapt the cutting speed to the respective circumstances. We are happy to provide technical support for your specific application.

HSS cutting inserts, Series 3 to 8

- Please adjust these guideline values according to manufacturer specifications, clamping operation and machine set-up!
- As starting values, we recommend reducing the specified cutting data by 20%.

- **Note:** The recommended cutting speeds for AM200-coated cutting inserts are based on a rule of thumb of data and apply under optimum conditions. In many applications the optimum conditions are not present. Thus it is necessary to adapt the cutting speed to the respective circumstances. We are happy to provide technical support for your specific application.

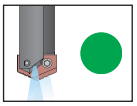
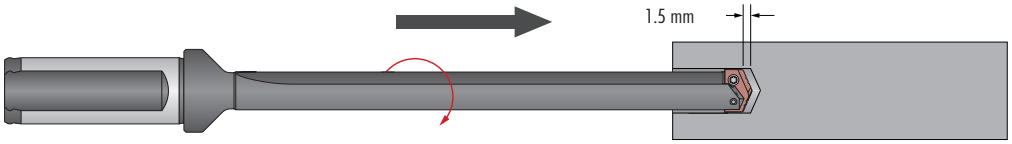
Machining notes drilling system T-A®



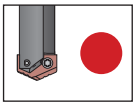
- Please adjust these guideline values according to clamping operation and machine set-up!
- **Note:** Tool breakage can cause serious damage. Without support bushings, please pre-drill a pilot bore 2-3xD deep with a short holder. The rotational speed of the tool outside the component may not exceed 50 rpm.

1. **Pilot bore**
   100 % rpm
   100 % mm/rev

Pre-drill a pilot bore of at least 2xD deep using the AMEC® pilot drill bit.
Use a short AMEC® pilot drill bit with an equal or greater point angle.

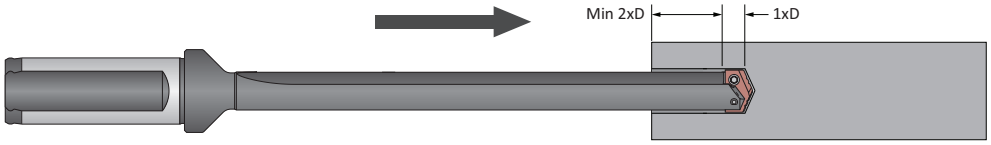


With cooling

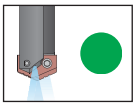


2. **Insert the deep-hole drill bit into the pilot bore**
   50 rpm max
   300 mm/min

Position the AMEC® deep-hole drill bit up to 1.5 mm from the root of the pilot bore with max. 50 rpm (clockwise rotation) and with a feed of 300 mm/min.

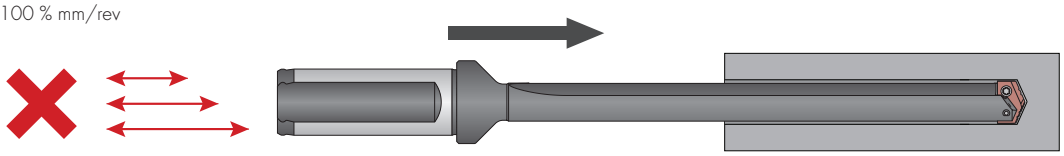


Without cooling

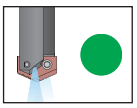


3. **Deep-hole drilling - Between-drilling**
   50 % rpm
   75 % mm/rev

Drill 1xD beyond the root of the pilot bore. Reduce cutting speed by 50 % and reduce feed by 25 %. At least 1 seconds' dwell time is required prior to further machining to reach full speed (prevents vibration).

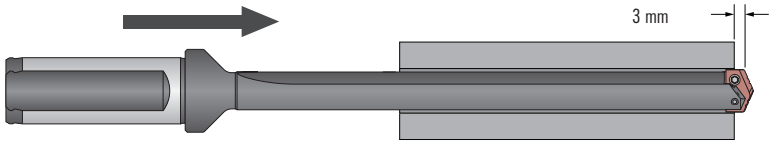


With cooling

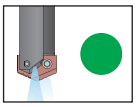


4. **Deep-hole drilling bit - Blind hole**
   100 % rpm
   100 % mm/rev

Drill to the full depth using the recommended cutting data.
Clamping cycles not recommended.

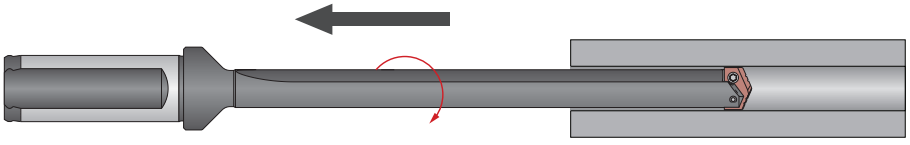


With cooling

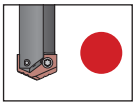


5. **Deep-hole drilling bit - Through-hole**
   50 % rpm
   75 % mm/rev

Only for through-holes:
Reduce cutting speed by 50 % and reduce feed by 25 % before exit.
Use no more than 3 mm beyond the full diameter.



With cooling



6. **Retracting the drill bit**
   50 rpm max

Reduction of the rotational speed to **max. 50 rpm** before the AMEC® drill bit is retracted from the hole.

Without cooling

palbit CHT Indexable inserts-NC spotting drill bits

- Please adjust these guideline values according to clamping operation and machine set-up!

palbit Type descriptions

- Carbide, coated

PVD types

PH6920 (P10-P35) (M10-M25) (K10-K30) (S10-S30)  PVD-coated (TiAlN), fine grade carbide for universal applications. Good toughness and wear resistance.	PH6930 (P20-P40) (M20-M30) (K20-K40) (S20-S40)  PVD-coated (TiAlN) superfine grain carbide for applications under unstable machine conditions at average cutting speeds.	PHC930 (P20-P40) (M20-M30) (K20-K40) (S20-S40)  PVD-coated (TiAlN+TiN), fine grain carbide type for general machining of steel, stainless steel, cast iron and superalloys with high cutting speeds.

Type recommendation

- **Note:** The recommendation applies to steel, high-alloy steels and heat-resistant steels.

palbit Machining notes TDS/TDC

Application	Description
Drilling on inclined surfaces 	Drilling of an inclined surface is possible up to a 30° incline without reducing the cutting parameters. Reduce feed force by 50 % on the incline for angles between 30° and 40°.
Interrupted cutting 	For reliable drilling, reduce cutting force and feed by 30 % for the greatest possible stability of machine and clamp.
Bundled drilling 	Series TDS and TDS drill bits are not suitable for this, as they create a disc in the bore diameter when exiting the material which prevents the drilling of subsequent material. Attention: In through-hole drilling these discs also occur upon exit. With a fixed drill bit and rotating workpiece, these can fly out uncontrolled from the workpiece. Please use enclosed machines and wear adequate occupational safety equipment.
Drilling 	For drilling tasks with TDS and TSC Series, turn the drill bit in the direction of the indexable cutting inserts. Observe the wear on the outer cutting edges, the greater chip volume can shorten the change intervals.

palbit Cartridge system

- **Diameter adjustment 5 mm**
- Loosen clamping screw on the outer cartridge and dismantle cartridge
- Cartridge is shortened on the outer diameter to the desired drill diameter
- Deburr shortened cartridge
- Press cartridge against the contact surface when screwing tight

palbit SCS/SCC Indexable inserts solid drill bit

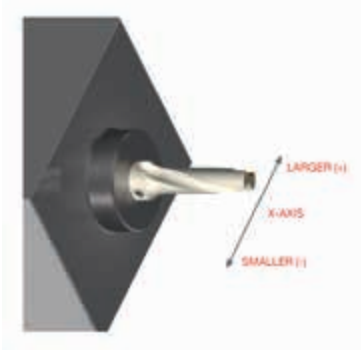
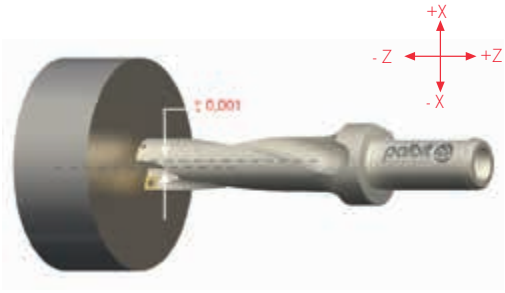
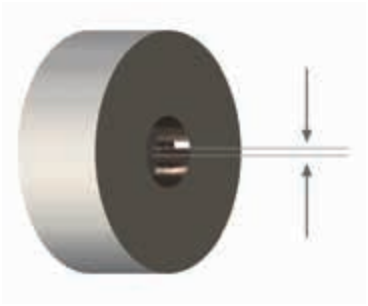
… HPC with internal cooling

ATORN®
High quality for great performance







palbit Problem-solver

- **Note:** When drilling through-holes, a disc is created when the drill bit exits. With a fixed drill bit and rotating workpiece, these can be forced out. Protect the operator and personnel with adequate occupational safety equipment. When the drill bit exits the material, a small recess is created as the pilot drill bit is no longer in the cut.

Problem	Corrective measures
Nicks 	Use on lathes: • Check machine settings • If the tool clamping cannot be improved, reduce feed by 30 % • If machine or tool clamping is unstable, reduce feed by 30 % **Note:** Types can be mixed for optimal machining. **Example:** PH6930 on inner and PH6920 on outer insert seat
Sub-optimal chip removal 	• Increase pressure and flow of coolant • Increase cutting speed by 20 %
Increased wear 	• Increase pressure and flow of coolant • Reduce cutting speed by 20 % • Choose a more wear-resistant model
Poor bore quality 	• Increase pressure and volume of coolant for better chip removal • Increase cutting speed by up to 20 % • Improve workpiece and tool clamping, alternatively reduce feed rate **Note**: High cutting speeds and low feed rates achieve better surfaces.

palbit Turning work with indexable inserts solid drill bits

- Notes for use on lathes

Application	Description
Axis alignment 	The cutting edge of the indexable cutting insert must be parallel to the x-axis of the machine in order to change the bore dimensions by moving the tool. To do this, a surface is applied to the tool shank which runs parallel to the cutting edge. The tool alignment can be oriented towards this.
Cutting edge orientation 	The outermost cutting edge of the drill bit should be in the (+) direction of the x-axis to allow offset drilling. The inner cutting edge should point towards the operator.
Test bore 	Please perform a test bore of approx. 5 mm deep to check the setting before producing the finished bore. The setting range is between 0.2 mm and 0.7 mm.

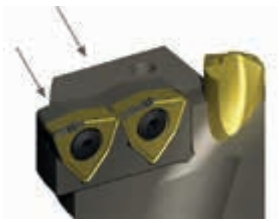
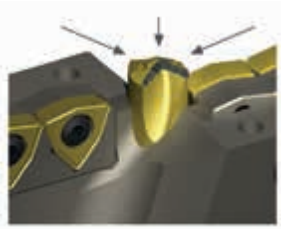
Coolant recommendation





palbit Machining notes VORTEX DRILL

Incorrect	Correct	Description
		No spot drilling is necessary on flat surfaces. For centring holes, the centring drill bit must be smaller than the pilot drill bit.
		Boring into an inclined surface is possible up to an 8° incline. Boring through an inclined surface is possible up to a 4° incline. For greater inclines, the incline and/or uneven surface must be face milled in advance.
		VORTEX drill bits are not recommended for drilling. Use Integrex drill bits for large diameters. Use solid carbide drill bits for small diameters. The solid carbide drill bit is centred using the centring hole of the pilot drill bit.
		VORTEX drill bits are not recommended. Note: Material residues are generated when boring through-holes. With a fixed drill bit and rotating workpiece, the centrifugal force can cause these material residues to fly out uncontrolled from the chuck. Use enclosed machines and wear adequate occupational safety equipment.

palbit Problem solving VORTEX DRILL

- **Note:** When drilling through-holes, a disc is created when the drill bit exits. With a fixed drill bit and rotating workpiece, these can be forced out. Protect the operator and personnel with adequate occupational safety equipment. When the drill bit exits the material, a small recess is created as the pilot drill bit is no longer in the cut.

Problem	Corrective measure
Nicks on the pilot drill bit 	Use on lathes: • Check tool centring, realign machine if necessary • Check and/or improve workpiece and tool clamping
Nicks on the indexable cutting insert 	• Use tougher model • Reduce feed by 20 % • Check and/or improve workpiece and tool clamping
Excessive pilot drill bit wear 	• Use coated pilot drill bit • Increase pressure and flow of coolant • Reduce cutting speed by 20 % • Choose a more wear-resistant model
Sub-optimal chip breaking 	• Increase cutting speed by 20 % and reduce feed by 20 %
Sub-optimal chip removal, poor bore quality 	• Increase pressure and volume of coolant for better chip removal • Increase speed by up to 20 %

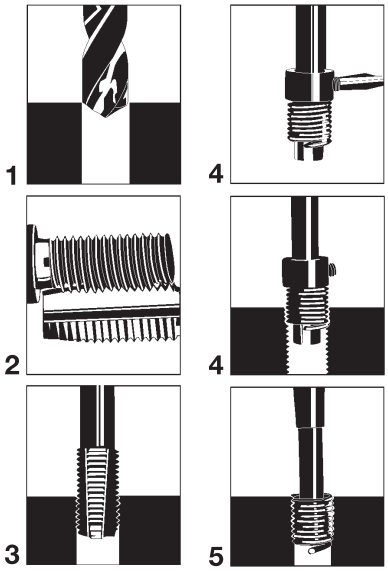
Repair of damaged or worn thread

Application
- Thread repair of damage or worn thread
- Thread reinforcement of materials with low shear strength, e.g. aluminium and magnesium alloys
- In mechanical, automotive, electrical and medical engineering



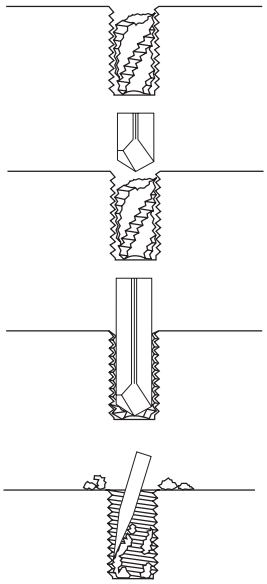
1 Drilling
Bore out damaged thread with twist drill bit.

2 Inspection
Inspect thread and threaded bolt for even thread and pitch.

3 Thread
Cut the holding thread into the bored-out hole using a special coil tap. The use of cutting oil is advisable.

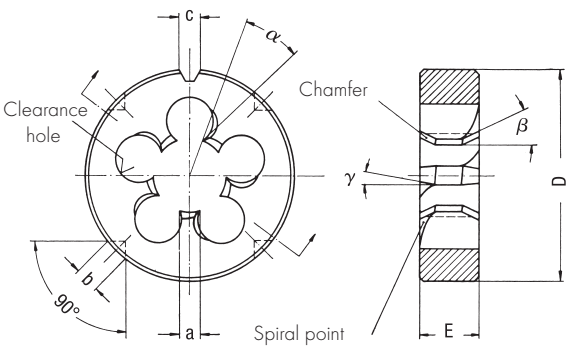
4 Install thread insert
Place the insert on the tool and ensure the tang sits in the keyway opening. Correctly adjust using the adjusting ring. Gently screw-in the thread insert in the rotation direction. Do not turn against the running direction; the tang may break.

5 Break-off tang
After installation, remove the screwing tool and remove the tang using the tang breaker.



Solid carbide extractors for extracting damaged taps

Cutting data and comments

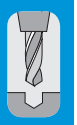


- Vc = ca. 20-25 m/min.
- Feed f = ca. 0.01-0.05 mm/rev

- Please ensure stable clamping!
- Please use high-quality lubricant!
- This tool should not be used to machine soft steels, aluminium alloys or other soft materials.
- The tool should be sharpened from time to time.

1. Position the drill bit on the centre of the damaged tap; please ensure that the workpiece and drill bit are securely clamped. If the head of the damaged tap protrudes from the workpiece, smooth the damaged surface to allow easier boring of the centre of the tap.
2. Perform initial centring at a low feed rate. Then retract the drill bit. Please use a little lubricant for this step.
3. Select the corresponding drill bit. Bore the hole with firm feed/speed. Pause the operation occasionally to remove chips. Please use lubricant of a sufficiently high quality.
4. If the bore is clean, the remaining tap can be easily removed using a scriber or a similar pointed tool; the thread cutting can then be continued.

Definitions and dimension explanations for threading dies



D External diameter (n. DIN, tolerance f10)
E Width
a Tooth width
c Groove width
b Diameter of the bore for retaining screw
α Rake angle
β Chamfer angle, half countersink angle
γ Spiral point angle

Threading die tolerances
We supply threading dies for the tolerance class "medium" as standard. Threading dies for other tolerance classes are available on request.

Tapping holes for taps

Core diameter-tolerance field for thread forming in accordance with DIN 13, Part 50

For strength reasons it is not necessary to maintain the core diameter tolerances of tolerance class 6H; tolerance class 7H satisfies the demand that the flank coverage of bolt and nut thread 0.32 x P should not be exceeded. Formed threads are normally stronger than cut threads due to the uninterrupted fibre orientation and the work hardening.

ATORN® Reverse countersink 180°

152501....

- Please adjust these guideline values according to clamping operation and machine set-up!

- For rotating use with stationary workpieces
- For ISO indexable cutting inserts (CPMT or CCM and CCG)
- With internal cooling, straight shank with clamping surface (Whistle-Notch)
  Ø15 and Ø 18 without internal cooling
  1. Positioning: pay attention to the cutting edge position!
  2. Move from the centre to the cutting edge opposite "E".
  3. Move eccentrically through the bore.
  4. Move back to the centre.
  5. Reverse countersink with rotational speed "N" and feed "F".
  6. Move from the centre to the cutting edge opposite "E" and retract from the hole.

Undersize for reaming (guide values)

Normally the pre-drilled hole is reamed in one operation, whereby the undersize values specified in the table below are recommended for the use of fixed reamers.

Materials group	Diameter range of the bore in mm				
	3 - 5	5 - 10	10 - 20	20 - 30	Over 30
Machining steel	0.1 - 0.2	0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5
Structural steel	0.1 - 0.2	0.2	0.2	0.3	0.3 - 0.4
Cast steel	0.1 - 0.2	0.2	0.2	0.2 - 0.3	0.3 - 0.4
Grey cast iron	0.1 - 0.2	0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5
Malleable cast iron	0.1 - 0.2	0.2	0.3	0.4	0.5
Copper	0.1 - 0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5	0.5
Copper alloy (bronze, brass)	0.1 - 0.2	0.2	0.2 - 0.3	0.3	0.3 - 0.4
Al. alloy long-chipping	0.1 - 0.2	0.2 - 0.3	0.3 - 0.4	0.4-0.5	0.5
Thermoset	0.1 - 0.2	0.3	0.4	0.4-0.5	0.5
Thermoplastic	0.1 - 0.2	0.2	0.2	0.3	0.3 - 0.4

The reaming allowance should be reduced for reamers with slotted bodies or inserted blades.

Pre- and post-reaming is performed for specific hole requirements and with particularly hard materials. Here, the table values below are reamed expediently in two equal parts.

Insufficient chip removal normally results in premature blunting because the teeth no longer cut, but simply press on the bore.

Fitting table for 1/100 machine reamers according to DIN 212

- Please adjust these guideline values according to clamping operation and machine set-up!

ATORN® High-performance exchangeable head reamers

The universal exchangeable heads are characterised by a complete and particularly user-friendly range. The joint means the exchangeable heads can be changed quickly and easily, and with high repetition precision. Meanwhile perfect hold with maximum stability and rigidity is achieved. The exchangeable head is tightened with a defined torque and requires a force-fitting and positive-fitting connection. High true running accuracy in conjunction with excellent rigidity are key features of this system.

Clean the taper, thread and flat surface of the exchangeable head using compressed air and a cloth.

Clean the taper, thread and flat surface of the exchangeable head mount using compressed air and a cloth.

Hand-tighten the exchangeable head clockwise in the exchangeable head mount. Then clamp the exchangeable head mount along with the tool in the machine mount.

Place the torque wrench as horizontal as possible on the exchangeable head and ensure the wrench surface is not tilted.

Tighten the exchangeable head using the torque wrench and the appropriate open-end snap-in spanner with the indicated tightening torque (see Table 'Exchangeable head tightening torque').

Result:
the gap between the exchangeable head and exchangeable head holder is closed and the connection is force-fitting and positive-fitting. The exchangeable head is now ready for use.

ATORN® High-performance exchangeable head reamers

Summary of icons used for milling tools

INFO

Cutting material	HSS – High-performance, high-speed steel	HSS-E – High-performance, high-speed steel Cobalt-alloyed	VHM – Solid carbide
Coating	TiN – Titanium-nitride coating	TiCN – Titanium-carbo-nitride coating	TiAlN – Titanium-aluminium-nitride coating
Surface treatment	Nit. – Nitrided surface	Vap. – Vapour-treated surface (steam-treated)	
Type/profile	Typ N – e.g. type N, for normal materials	NF – e.g. NF Roughing-finishing toothing	HR – e.g. HR Fine knuckle-type toothing
Standard	DIN 327 – Complies with DIN 327	DIN 844 – Complies with DIN 844	Werks-norm – Complies with factory standard
Shank design	DIN 6535 HA – e.g. straight shank according to DIN 6535 HA	e.g. straight shank with Weldon clamping surface	e.g. MT shank
Number of cutting edges	Z 3 – e.g. 3 cutting edges and/or 3 insert seats	Z 5 – e.g. 5 cutting edges and/or 5 insert seats	Z 8+ – e.g. 8 or more cutting edges and/or 8 or more insert seats
Spiral angle	30° – e.g. 30° right-hand twist	41° 43° 45° – e.g. unequal helix angle	10° – e.g. 10° left-handed twist
Tooth pitch	Unequal tooth pitch		
Tolerance	h5 – Shank tolerance	e8 – Diameter tolerance	±0,005 r – Radius tolerance
Application	Centre cutting	Over-centre cutting	
Coolant design	Axial coolant bore	Radial coolant bore	
Milling technology	HSC – High-Speed-Cutting (High-speed milling)	HPC – High-Performance-Cutting (High-performance milling)	TVC – Trochoidal-Volume-Cutting (Trochoidal milling)
Cutting data	i Vc/fz – More information such as cutting data recommendations in the technical appendix		
Milling applications	Face milling	Corner milling	Groove milling
	Face milling	Pocket milling	Chamfering
	Circular cutting	Drill cutting	Ramping
	Copy milling	Contour milling	T-groove milling
suitable for	3D PRINT – 3D additive		

Usage recommendations diagram (example)

- **Materials group**
- **Usage recommendation**: Depicted by ISO colour code. Full dot = very well suited, circle = well suited
- **Recommended cutting speed:** Cutting speed range Vc m/min. for medium-sized tool diameter.

material	● very well suited ○ well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel		
		< 700 N/mm²	< 1000 N/mm²	< 1400 N/mm²	ferrit./martens.	austenitic	duplex	GG / GTS	GGG		< 30 HRc	≥ 30 HRc	< 8 % Si	≥ 8 % Si	Cu-alloy	GRP/CFP/thermo.	< 55 HRc	< 60 HRc	≥ 60 HRc
	Cutting speed Vc m/min.	150-200	80-120	70-90	60-90	40-70	40-70	80-120	80-120	60-70	20-35	15-30	280-350	200-250	120-200	120-200	60-90	40-70	40-70

Please adjust these guidelines according to clamping operation and machine set-up.

ATORN® Machine saw blades HSS

i Vc/fz 715

- Precision-machined machine saw blade HSS with special heat treatment for a long service life
- Very high surface quality for exact and straight cutting
- High-quality cutting material for high demands on service life
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS DMo 5 Quality (Material No. 1.3343)
- **For materials up to a tensile strength of 1100 N/mm²**

ATORN® Machine saw blades HSS-Co

715

- Long service life and short cutting times
- Cobalt-alloyed machine saw blades are particularly suitable for tough and hard materials such as alloyed, unalloyed and heat-treated steel, as well as high-strength steel and stainless steel.
- High-quality cutting material for high demands on service life
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS-Co. EMo 5 Co 5 Quality (Material No. 1.3243).
- **For extremely hard materials up to 1300 N/mm² e.g. austenitic steels and steels with a high chromium-nickel content**

ATORN® Machine saw blades HSS bi-metal

715

- Long service life and short cutting times
- The perfect combination of flexibility and durability with special heat treatment for a long service life
- Very high surface quality for exact and straight cutting
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS bi-metal, DMo 5-cutting edge quality (Material No. 1.3343) on a special steel back
- **For materials up to a tensile strength of 1100 N/mm²**

ATORN® Machine saw blades HSS-Co for KASTO saws

715

- Long service life and short cutting times
- Cobalt-alloyed machine saw blades are particularly suitable for tough and hard materials such as alloyed, unalloyed and heat-treated steel, as well as high-strength steel and stainless steel.
- High-quality cutting material for high demands on service life
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS-Co. EMo 5 Co 5 Quality (Material No. 1.3243).
- **For extremely hard materials up to 1300 N/mm² e.g. austenitic steels and steels with a high chromium-nickel content**

ATORN® Machine saw blades HSS bi-metal for KASTO saws

715

- Long service life and short cutting times
- The perfect combination of flexibility and durability with special heat treatment for a long service life
- Very high surface quality for exact and straight cutting
- **Use:** for precise, quick and efficient sawing
- **Quality:** HSS bi-metal. DMo 5-cutting-edge quality (Material No. 1.3343) on a special steel back
- **For materials up to a tensile strength of 1100 N/mm²**

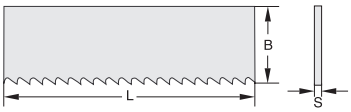
ATORN® Metal band saw blades, continuous



716

- Additional dimensions and toothing available on request

Bi-metal band saw blades with combination teeth, continuous

- **For machines, for example Heska, Amada, DoAll, Jaespa, Pehaka, Kaltenbach, Müller**
- Particularly wear-resistant with a high degree of cutting precision
- For rust-proof and acid-proof steel in medium and large cross-sections
- For all steel grades up to 45 HRc
- For non-ferrous metals
- For all material diameters and contour cuts

SARA® Metal circular saw blade

HSS | DIN 1837A | Typ N | i Vc/fz | 716

- **Fine-toothed**
- **Double helical tooth, form A,** lateral bevel grinding (hollow-ground)
- Hole without keyway
- For fine slotting and end-to-end cutting work, for low-depth cutting or for thin-walled materials

Fine-toothed, Form A, double helical tooth, DIN 1840 (rake angle 5°)

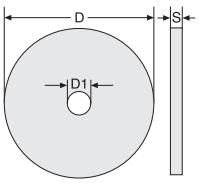
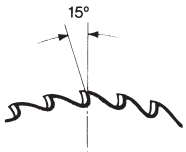
... maximum material removal rate



ATORN®



High quality for great performance

SARA® Metal circular saw blade

HSS | DIN 1838B | Typ N | Vc/fz | 716

- **Coarse-toothed**
- **With curved tooth, form B,** lateral bevel grinding (hollow-grounded)
- Hole without keyway
- For coarse slotting and end-to-end cutting work, and for machining with large cutting depths and cross-sections up to max. 100 mm depending on dimensions, pitch, number of teeth and feed rate/ cutting speed

Coarse-toothed, Form B, curved tooth, DIN 1840 (rake angle 15°)

SARA® Metal circular saw blade

HSS | DIN 1838C | Typ N | Vc/fz | 716

- **Coarse-toothed**
- **Curved toothing with lead and raker teeth (HZ toothing)**
- Lateral bevel grinding (hollow grinding), bore hole without keyway
- This tooth form is primarily used for end-to-end cutting as the raised lead tooth makes it impossible to achieve a straight finish at the base of the cut with non-continuous cutting or milling. Otherwise, these blades can be used as specified in DIN 1838 B.

Coarse-toothed/HZ, Form C, curved tooth, DIN 1840 (rake angle 15°)

SARA® Solid carbide circular saw blade

VHM | DIN 1838 | Vc/fz | 417

- **Coarse-toothed**
- **With curved tooth, form B,** lateral bevel grinding (hollow-ground)
- Hole without keyway
- For coarse slotting and end-to-end cutting work, and for machining with large cutting depths and cross-sections up to max. 100 mm depending on dimensions, pitch, number of teeth and feed rate/cutting speed

Coarse-toothed, Form B, curved tooth, DIN 1840 (rake angle 15°)

SARA® Metal circular saw blade, precision version

HSS | HSS-E | Vc/fz | 718

- Precision version for use on slow-running circular saw machines or cold circular saws from various manufacturers (ADIGE, EISELE, BERG&SCHMID, IBP, THOMAS, MEP, KALTENBACH, TRENNJÄGER, HÄBERLE etc.)
- Steam-treated surface to prevent material welding, enhance coolant absorption and increase wear resistance
- **Quantity and dimensions of driving pin holes: (quantity / bore hole Ø / pitch circle Ø)**

Usage recommendation for
tooth pitch t: 3 + 4
tooth form BW = profiles and pipes, wall thickness 1.0-2.0 mm
approx. 40-60 rpm depending on diameter
tooth pitch t: 5
tooth form BW = profiles and pipes, wall thickness 2.0-3.0 mm
approx. 40-60 rpm depending on diameter
solid material, cross section 10-20 mm,
approx. 20-40 rpm depending on diameter
tooth pitch t: 6 + 8
tooth form HZ = solid material, cross section 20-40 mm
approx. 20-40 rpm depending on diameter
tooth pitch t: 10
tooth form HZ = solid material, cross section 40-60 mm
approx. 20-40 rpm depending on diameter

Note: Please ensure that the saw blade is undamaged, that it has been mounted correctly, that there is sufficient cooling, that the blade is engaged correctly and that workpieces are properly secured to prevent slippage. Failure to do so puts the saw blade at risk of breaking!

SARA® Disc milling cutters

HSS-E | DIN 1834 | Typ N

- **Narrow version**
- **3 cutting edges**
- Type N, cross-cut toothing
- Bore with longitudinal groove in accordance with DIN 138
- Smooth cut thanks to helical toothing
- Optimum chip removal with spacious chip chambers
- Milling cutters are self-freeing to prevent jamming

HSS

High-speed steel is a high-alloy tool steel that is largely used as a cutting material i.e. for milling tools, drills, turning tools and broaching tools. The name refers to three to four-times higher cutting speeds compared with conventional tool steel. While conventional tool steel loses its hardness from approx. 200°C, high-speed steel retains it hardness up to approx 600°C.

Universal primarily for ISO P	**Page 424**

Solid carbide

Cutting tools that are made entirely of carbide, compared with coated tools or tools composed of various materials, are classified as **solid carbide** or SC.

Universal primarily for ISO P	**Page 448**
Stainless steel / superalloys primarily for ISO M	**Page 508**
Aluminium primarily for ISO N	**Page 482**
Graphite primarily for ISO N	**Page 518**
Composites primarily for ISO N	**Page 524**
Hard materials primarily for ISO H	**Page 536**

Solid carbide milling cutter range

for modern **milling strategies**.

SARA® Slotting cutter

HSS-E | DIN 850 | Typ N | h12 | h6 | DIN 1835 B | Z 6 | Z 8+ | Vc/fz | 719

- With cross-cut toothing
- For groove milling in accordance with DIN 6888, P9 fit
- * = not DIN-compliant

SARA® Slot milling cutter

VHM | 30° | e8 | h5 | DIN 6535 HA | DIN 6535 HB | Z 2 | TiAlN | HSC | Vc/fz | 725

- **With clearance**
- Straight shank up to Ø 2.5 mm smooth, from Ø 2.8 mm with driving planes in accordance with DIN 6535-HB
- **Optimum chip removal due to extremely smooth surface**
- **For P9 grooves**
- **Cutting material: ultra-fine grain solid carbide, TiAlN-Ultra-coated**

SARA Mini end milling cutter

VHM | 30° | e8 | h5 | DIN 6535 HA | DIN 6535 HB | Z 3 | TiAlN | Vc/fz | 723

- Straight shank with driving plane, up to Ø 1.8 mm smooth
- **Cutting material: ultra-fine grain solid carbide, TiAlN-Ultra-coated**
- **Note:** This milling cutter is not cost-effective to re-sharpen. It is more economical to use the cutters up to their wear limit and replace them with brand new tools.

SARA® End milling cutters

VHM | 38°/40°/42° | h10 | h6 | DIN 6535 HB | Z 3 | TiAlN | HPC | Vc/fz | 726

- **38°/40°/42° right-hand helix**
- For universal applications
- **For roughing and finishing**
- For large cutting depths
- **Very high degree of smoothness**
- Protective chamfer for increased service life

VAN HOORN CARBIDE VHRFFW roughing cutter

VHM | 40° | e8 | h5 | DIN 6535 HB | Z 3 | Z 4 | TiAlN | HPC | Vc/fz | 728

- **Cutting material: ultra-fine grain solid carbide, TiAlN-coated**
- Special **microwave** pre-treatment and finishing treatment
- **New chip flute geometry** for enhanced cooling and chip flow
- For wet and dry machining, **extremely high chip removal rates and long service life**

Feed rate up to 3 m/min.

Torus milling cutter WXS-CRE HPC-Turbomill

VHM | DIN 6535 HA | Z 5 | Z 4 | TiAlN | HPC | HSC | Vc/fz | 723

NEW · NUOVO · NY · NOUVEAU · NUEVO

Twisted cutting edge, quiet operation up to 65 HRc, finishing geometry, feed rates up to 20,000 mm/min

- **5 cutting edges, face cutter geometry for plunge milling**
- Straight shank, suitable for use in shrink fit holders
- Thanks to a **newly developed cutting edge geometry**, this milling cutter is especially suitable for **extremely high feed rates** with normal-strength and **hardened materials**
- New, extremely ductile and fracture-proof ultra-fine grain quality with enhanced multi-layer coating (Ultra-WXS)
- **Cutting material: ultra-fine grain solid carbide, TiAlN-coated**

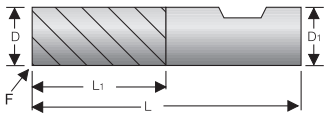
SARA® The 35 – 38° *HPC* series

INFO

The universal tool for all roughing and finishing work



With irregular helix angle and an extremely high material removal rate

- Minimisation of vibration
- Better surface finish
- Protective chamfer F for increased service life
- Optional shank for greater cutting depths
- High-performance layer for high hot hardness and oxidation resistance
- Ideally suited for high performance cutting
- Short and long designs for machining steel, cast iron, stainless steel and titanium alloys

SARA® End milling cutters

VHM | NH | 35°-38° | h10 | h6 | DIN 6535 HB | Z 4 | TiAlN | HPC | Vc/fz | 730

- **Irregular helix angle and pitch for low-vibration milling**
- With protective chamfer F for improved service life
- Also suitable for dry machining

SARA® Drilling and plunge milling cutter

VHM | 36° -38° | h10 | h6 | DIN 6535 HA | DIN 6535 HB | Z 4 | AlTiN | HPC | Vc/fz | 737

- **Face geometry for drilling and ramping**
- With clearance
- **Irregular pitch to minimise vibrations**
- High material removal rate
- **High feed rates for plunge milling and groove milling**
- Up to 45° plunge angle
- Undersized for precise fitting grooves

SARA® End milling cutters Stainless steel

VHM | Typ N | 35°-38° | h10 | h6 | DIN 6535 HB | Z 4 | AlTiN | HPC | Vc/fz | 734

- **With clearance**
- **Irregular helix angle and pitch for low-vibration milling**
- With protective chamfer F for improved service life
- Specially designed for stainless steel machining

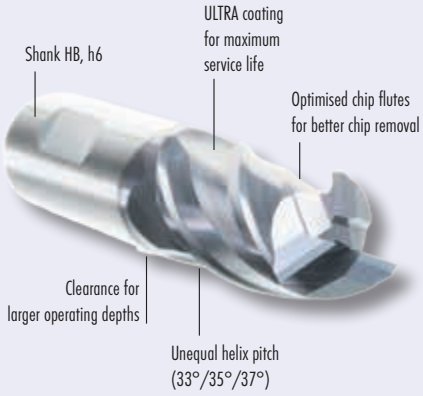
ATORN® HPC POWER high-performance range

INFO



Tough on everything!

The performance of the low-vibration premium tools was significantly increased with the new ATORN HPC POWER high-performance range. It offers a milling range with innovative HPC geometry designed for efficient and universal machining of steel, stainless steel, non-ferrous metal, cast iron and special alloys.
Significantly higher material removal rates in machining are the result of various spiral angles in conjunction with newly developed, robust face and surface cutting edges. Even with extreme cutting data, the tools impress with their ultra-smooth operation, high process safety and low machine loads. Plunge milling and ramping processes are enhanced by the optimised face geometries. The new solid carbide with an innovative PVD high-performance coating also contributes to improved service life and safer chip removal.

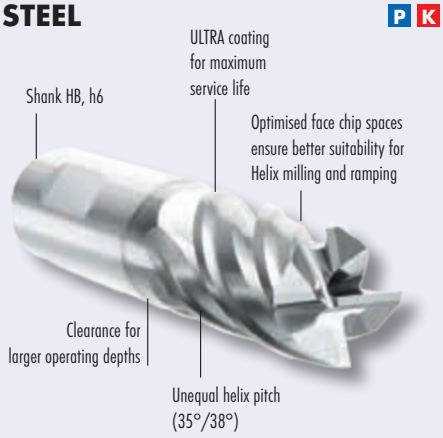
Advantages:
- Increased productivity – roughing and finishing with the same tool
- Excellent surface quality even with high feed rates
- Long service life thanks to optimised cutting edge geometries and high-performance coatings
- Machining methods such as plunge milling/drilling or ramping possible
- Low machine load thanks to smooth operation, long service life
- Comprehensive possible uses and efficient machining of tough materials
- Suitable for all modern milling strategies e.g. trochoidal milling

UNIVERSAL

P M K N S

Dual cutting edge protection with edge protection chamfer and robust face-cutter

Optimised face-cutter geometry with large chip spaces



Long design with axial internal cooling available

The HPC POWER groove milling cutter is a 3-edge high-performance tool. With its large chip spaces and excellent chip removal, it is ideal for groove milling. Each cutting edge has another helix angle (33°/35°/37°). In addition to the entire range of stainless and acid-resistant steels, it can also be used in all aspects of steel machining.

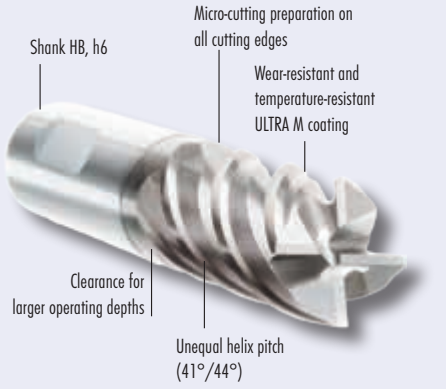
Features:
- Ø range 4 - 20 mm
- Long version
- Each cutting edge has another helix angle (33°/35°/37°)

STEEL

P K

Dual cutting edge protection with edge protection chamfer and robust face-cutter

Defined cutting edge honing increases the service life and process safety



Radius-shaped gashing for improved chip removal

The performance of the low-vibration premium tools was considerably increased with the HPC POWER solid carbide end milling cutter for steel and cast iron: significantly higher material removal rates in machining are the result of various spiral angles in conjunction with newly developed, robust face and surface cutting edges.
A feature of the ATORN HPC POWER milling cutter is its multi-functional application: Roughing and finishing can be achieved with the same tool. Similarly, narrow bridges and grooves up to 2xD with outstanding surface quality can be produced.

Features:
- Ø range 4 - 20 mm
- Long version
- Unequal helix pitch (35°/38°)
- Low power consumption
- Stable cutting edge and edge protection chamfer
- Optimised face-cutter design

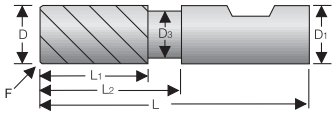
Stainless steel

M N S

New edge protection in the form multi-chamfer grinding

Optimised gashing in the centre

Long version with radial internal cooling available



The 4-edge high-speed milling cutter was specially developed for cutting stainless and acid-resistant steels, titanium and nickel-based alloys, as well as short-chipping aluminium.
Special cutting geometries combined with the optimum carbide quality and multi-layer, fine-crystal PVD coating set new standards in machining demanding materials. Chip formation, chip removal and temperature resistance were optimised and guarantee high-performance with demanding cutting data.

Features:
- Ø range 4 - 20 mm
- Unequal helix pitch (41°/44°)
- Optimised cutting edge design (multi-chamfer grinding)
- Perfect for modern milling strategies

ATORN® HPC Power end milling cutter, universal

VHM | NH | 33° -35° -37° | h10 | h6 | DIN 6535 HB | Z 3 | TiAlN | HPC | Vc/fz | 735

- **Irregular helix angle and pitch for low-vibration milling**
- With protective chamfer F for improved tool life and stable face cutter, double protected
- Optimised face-cutter geometry with large chip spaces
- **With clearance**
- ULTRA coated for maximum service life

ATORN® HPC Power end milling cutter, steel

VHM | NH | 35° -38° | h10 | h6 | DIN 6535 HA | DIN 6535 HB | Z 4 | TiAlN | HPC | Vc/fz | 736

- **Irregular helix angle and pitch for low-vibration milling**
- With protective chamfer F for improved tool life and stable face cutter, double protected
- Optimised face-cutter geometry with large chip spaces
- Radius-shaped face gashing for improved chip removal
- Defined cutting-edge rounding
- **With clearance**
- ULTRA coated for maximum service life

TopSolid

ADEQUATE SOLUTION

MAKE THE MOST OF THE SARA® TROCHOIDAL RANGE AND TOPSOLID'7 VOLUMILL

- VoluMill is a user-friendly software solution for large-volume rough milling
- Longer cutting tool and machine service life
- Greater cutting depths and feed rates
- Low arc of contact
- Work up to 60% faster with the VoluMill TopSolid Edition
- An alternative to conventional roughing routines

- Use of the entire length of the cutting edge
- Reduced tool costs
- Productivity gains
- More machining capacity

VoluMill TopSolid EDITION

ATORN® Trochoidal end milling cutter (steel)

VHM | Typ N | 44° -45° | e8 | h5 | DIN 6535 HB | Z 5 | Z 4 | AlTiN | TVC | Vc/fz | 770

- With clearance
- **Milling cutter designed for TVC use**
- Reinforced core
- With chip breaker
- **Cutting material: superfine grain solid carbide**
- Rounded chip space for improved chip removal
- **ae max. 20 %**

ATORN® Trochoidal end milling cutter (aluminium)

VHM | Typ W | 20° | e8 | h5 | DIN 6535 HB | Z 4 | TVC | Vc/fz | 770

- With clearance
- **Milling cutter designed for TVC use**
- Reinforced core
- **Cutting material: superfine grain solid carbide**
- Polished cutting edges for perfect chip removal
- **ae max. 30 %**

ATORN®

The ULTRA-N
high-speed milling range for the milling of aluminium

With the new ATORN range. Sartorius offers a complete milling range for machining aluminium.
The ATORN milling program ULTRA-N sets technical benchmarks here:

- extremely soft cut. optimum chip removal and excellent running smoothness
- short processing times thanks to high usage parameters
- excellent surface quality
- no or minimal burr formation
- Precision thanks to low manufacturing tolerances
- coating specially designed for machining aluminium

VAN HOORN CARBIDE VHLAW end milling cutter

VHM | 25° | h9 | h5 | DIN 6535 HB | Z 3 | HSC | Vc/fz | 747

- **Roughing cutter** for a broad range of applications (non-ferrous metals and plastics)
- Highly positive rake and clearance angles as well as sharp cutting edges guarantee
- **very low cutting forces** and **minimal cutting pressure**
  Large chip flutes for reliable chip removal at **up to 50 % higher feed rates**, resulting in shorter machining times

ATORN® Ultra-N end milling cutter

VHM | Typ W | 35° -38° | h9 | h5 | DIN 6535 HA | Z 4 | ZrCN | HPC | Vc/fz | 752

- **With clearance**
- **4 cutting edges, with edge protection F**
- **With defined cutting edge rounding**
- For non-ferrous materials
- Irregular helix angle for vibration-free milling
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

material: ● very well suited ○ well suited

ATORN® Ultra-N torus cutter

VHM | Typ W | 30° | e8 | h5 | DIN 6535 HA | Z 2 | ZrCN | Vc/fz | 753

- **With clearance**
- **With defined cutting edge rounding**
- For non-ferrous materials
- Radius tolerance +/- 0.015 mm
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

material	● very well suited ○ well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel

ATORN® Ultra-N mini radius milling cutter

VHM | Typ W | 30° | e8 | h5 | DIN 6535 HA | Z 2 | ZrCN | 3D PRINT | Vc/fz | 754

- **With clearance**
- **With defined cutting edge rounding from Ø 1.5 mm**
- Long-necked version for non-ferrous materials
- Radius tolerance +/- 0.01 mm
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

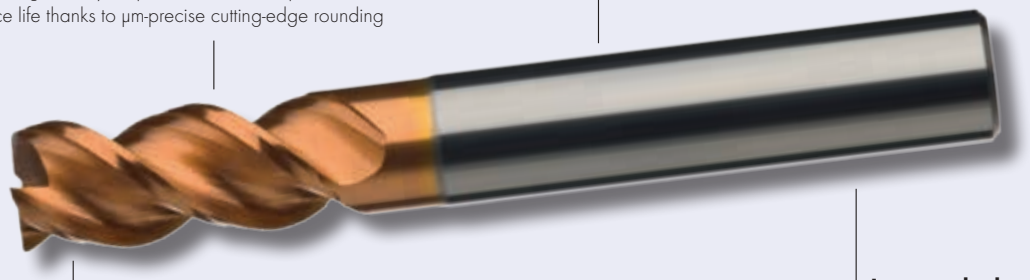
ATORN® High-performance milling tools *Ultra-N*

INFO



Tool geometry

An optimal cutting-, micro- and chip-space geometry is particularly crucial in aluminium machining. Based on numerous machining tests, the geometries have been revised and adapted perfectly to the requirements of aluminium machining:

- maximum core diameter for high stability
- special cutting geometry to reduce cutting pressure
- optimal chip-space geometry for process-reliable chip removal
- Increased service life thanks to µm-precise cutting-edge rounding

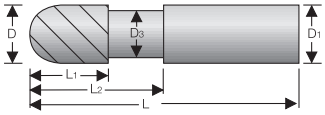
Wear-resistant carbide metal

The basic substrate consists of H10F fine-grade solid carbide for aluminium with a grain size of 0.6 - 0.8 µm. This substrate is especially wear-resistant, hard and resistant to pressure.
It can best withstand the dynamic and mechanical loads to be encountered. This is particularly important in the event of vibrations, which can easily lead to chunking on the cutting edge.

Defined cutting-edge rounding

The basic aim of a cutting-edge rounding is to increase the service life of the tool and of the cutting edge. In the cutting tool grinding process, the cutting edge loses its definition due to micro-fractures (chunking). Through a defined honing, a process environment can be achieved at an early stage; that is, grinding-related points are removed and the risk of comb cracks minimised.

Conventional methods for the cutting edge rounding had the disadvantage that they were unable to create a reproducible and even honing of the cutting edge. The new technology allows optimum process control and reproducibility. With it, a uniform, µm-precise honing of the cutting edge and face can be achieved. This has a positive effect on the quality and service life of the tools and significantly improves your workpiece surfaces.



Improved tolerances

Precision produces quality: one reason why this new generation of tools is manufactured to tighter tolerances. Basically, all shanks are made in h5 quality and all cutting edges in g7 quality.

ATORN® Ultra-N radius milling cutter

VHM | Typ W | 45° | e8 | h5 | DIN 6535 HA | Z 2 | ZrCN | Vc/fz | 754

- **With clearance**
- **With defined cutting edge rounding**
- For non-ferrous materials
- Radius tolerance +/- 0.01 mm
- Cutting material: superfine grain solid carbide, **ZrCN Ultra-N**-coated

ATORN® Coating Ultra-N PRO

INFO

Carbon high-performance thin-layer coating

for machining CFRP, GFRP, aluminium, copper, graphite, ceramic, wood and sandwich materials, for forming materials with an adhesive tendency (e.g. aluminium)

Ta-C

Hardness **6000 HV**

Coating properties

Material	amorphous, hydrogen-free carbon layer
Micro hardness	> 5000 HVpl 20 mN; standard: 6000-7500 HVpl 20 mN
Application temperature	max. 550°C
Colour	rainbow colours, up to anthracite

Advantages

- Good sliding properties and high layer hardness (approx. 60-80 % the hardness of diamond)
- Extremely durable and low-friction (wear protection coating for lubricated and non-lubricated inserts)
- Good milling and cutting quality
- No rounding of sharp-edged tools
- Coating performed at < 250°C. Even temperature-sensitive substrates can be coated.

ATORN® High-speed milling cutters for stainless steel and special alloys

INFO

The new generation of ATORN milling cutters are characterised by excellent performance in the machining of stainless steel and special alloys containing metals such as nickel, cobalt and titanium. An ultra-fine-grain carbide metal substrate in combination with high-performance geometry and specially developed ULTRA-MS coating make these tools absolutely process-safe and wear-resistant and allow a high metal removal rate.
The new geometries – i.e., adapted core diameters, optimal and positive rake and helix angles and corresponding microgeometries – allow for high feed rates and deliveries. One example of this are the 4-edge HPC milling cutters. These are designed with unequal flute spacing and unequal helix pitch. This design not only makes the tools suitable for use in **HPC milling**, but allows trouble-free **trochoidal milling** as well.
The range includes HSC- and HPC-enabled tools for roughing, semi-roughing and finishing from Ø 0.2-20 mm. The excellent stability during machining leads to process safety and high-quality surfaces, which cuts costs and boosts efficiency.
The mini-end milling cutters, also available as torus and radius milling cutters, round out the range.

ATORN®

High quality for great performance

Extreme temperature resistance thanks to ULTRA-MS
The special ULTRA-MS coating can handle application temperatures of up to 1100 ° C. That's important, because these special alloys are poor heat dissipaters.

Maximum service life
The ULTRA-MS coating significantly increases the service life of the tools.

Perfect cutting edge geometry makes for quiet running
Perfectly matched to the machining conditions in stainless steel and special alloys:
positive cutting geometries ensure soft cuts and smooth running

Low vibrations, even in border areas
The unequal helix pitch and unequal flute spacing reduce vibrations during machining

High precision
For precise components, high-precision edge radii, among other things, with a tolerance of less than 0.01 mm, ensure

The highest surface quality
The multitude of special features guarantees the highest quality surface finishes with no chatter marks, and much more.

Overview of the range

		Ø-area mm	Page
Solid carbide mini end milling cutters		Ø 0.5 - 4	509
Solid carbide mini torus cutters		Ø 0.5 - 4	514
Solid carbide mini radius milling cutters		Ø 0.5 - 4	516
Solid carbide end milling cutters for stainless steel		Ø 4 - 20	510
Solid carbide end milling cutters for titanium materials		Ø 3 - 25	512
Solid carbide torus cutters		Ø 4 - 20	515
Solid carbide radius milling cutters, standard		Ø 3 - 20	517

HPMT End milling cutters

VHM | 40° | h10 | h6 | DIN 6535 HB | Z 4 | AlCrN | HPC | 3D PRINT | Vc/fz | 733

- **With clearance**
- **Irregular pitch to minimise vibrations**
- CNC repetition precision to within 10 µm
- **For milling stainless steel, machining exotic materials, and general applications**
- Especially suitable for groove milling and lateral machining

EXCLUSIVE item: The all-rounder!

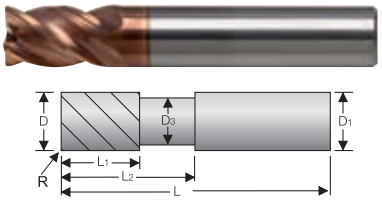
VAN HOORN CARBIDE VHVTR/W 4/5 end milling cutter

VHM | 35°-38° | e8 | h9 | DIN 6535 HA | DIN 6535 HB | Z 4 | Z 5 | TiAlSiN | Vc/fz | 738



- **Cutting material: ultra-fine grain solid carbide, TiAlSiN-coated**
- Special pre-treatment and finishing treatment due to **micro radiation**
- **New chip flute geometry** for enhanced cooling and chip flow
- For wet machining, **high material removal rate**

For machining titanium and stainless steel

SARA® Diamond-coated end milling cutter DIA+

INFO

Specially designed for our diamond range, the crystalline diamond coating is ideal for machining **graphite**, **GFRP materials** and **copper**. Thanks to the outstanding coating adhesion on the specially selected carbide, you achieve maximum service life with our diamond range.

This coating is also extremely abrasion-resistant, and there is no typical CVD nose on the sharp cutting edges. This means greater efficiency, lower costs and thus increased yield.

Special features

- High-tech CVD diamond coating
- Improved geometry
- Increased wear resistance thanks to crystalline diamond coating
- Layer thickness 10+2 µm
- Hardness 10,000 HV

Especially for machining graphite

		Ø range mm	Page
Mini torus milling cutter DIA+		Ø 0.2-12	518
Mini radius milling cutter DIA+		Ø 0.2-12	520
Torus milling cutter DIA+, short		Ø 3-16	522
Torus milling cutter DIA+, long		Ø 3-16	523

SARA® DIA+ mini torus cutter

VHM | Typ N | 30° | h9 | h5 | DIN 6535 HA | Z 2 | DIA | HSC | Vc/fz 760

- Crystalline diamond coating
- Reliable graphite, GFRP and CFRP machining
- With clearance
- Radius tolerance +/- 0.0003

Layer thickness 10+2 µm

SARA® DIA+ mini radius milling cutter

VHM | Typ N | 30° | h9 | h5 | DIN 6535 HA | Z 2 | DIA | HSC | Vc/fz | 760

- Crystalline diamond coating
- Reliable graphite, GFRP and CFRP machining
- With clearance
- Radius tolerance +/- 0.0003

Layer thickness 10+2 µm

material	● very well suited ○ well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel		
		< 700 N/mm²	< 1000 N/mm²	< 1400 N/mm²	ferrit./martens.	austenitic	duplex	GG/GTS	GGG		< 30 HRc	≥ 30 HRc	< 8 % Si	≥ 8 % Si	Cu-alloy	GRP/CFP/thermo.	< 55 HRc	< 60 HRc	≥ 60 HRc
																● 95-300			
	Cutting speed Vc m/min.																		
	Please adjust these guidelines according to clamping operation and machine set-up.

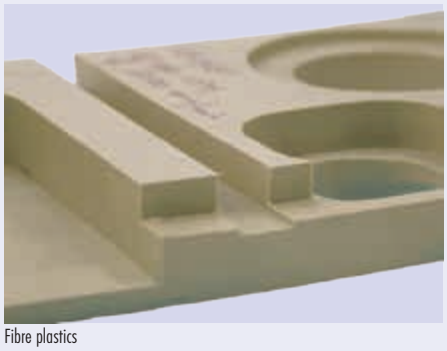
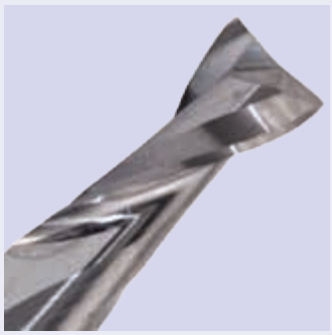
Solutions for composite



The efficient machining of modern materials such as fibre-reinforced plastics, honeycomb composites, aluminium, titanium and composites requires a new generation of cutting tools. The interaction of geometry, cutting material and coating creates the right material for machining such modern materials. All materials are designed to satisfy a range of requirements that occur when machining new materials.

Our tools have proven their quality in various tests: Proven cutting angle and cutting material combined with specially polished chip flutes ensure low cutting forces and problem-free chip removal.
This prevents delamination, outstanding residual fibres, roll-over and thermal damage to the workpiece.
We offer a comprehensive range of high-performance tools for optimum drilling and milling results in modern materials.

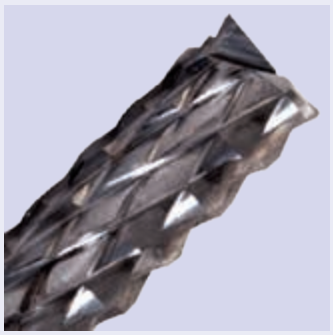
CFRP



CFRP-titanium sandwich

Honeycomb

Fibre plastics

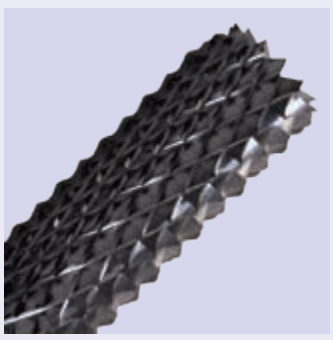


Alu honeycomb with GFRP cover

Aluminium honeycomb with aluminium cover

Polished chip flute

Rapid-Line HSC milling cutters have considerably enhanced chip flow. Machining temperatures are lower, thus avoiding overheating and welding pick-up. Rapid-Line milling cutters have a significantly longer service life and can also produce better surface qualities.
We recommend our "RAPID-Shine" product range for machining ultra-transparent surfaces. Thanks to their special cutting geometry and lapped cutting edges, these milling cutters are ideal for machining ultra-transparent plastic materials.

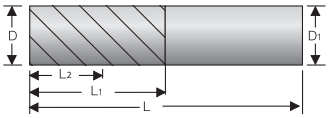


Pyramid toothing

A special grinding process combines polished chip flutes and ultra-sharp cutting edges. This results in low friction coefficients and high cutting stability. Designed primarily for machining CFRP and GFRP, we offer 3 different profile types – Fine, Medium and Coarse – as well as 3 different spur toothings for drilling, face milling and edge banding.

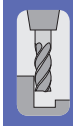
Honeycomb

The honeycomb structure is first cut and then separated, but never crushed.
The result is high-quality surfaces that can be machined further with ease.



Coating

Our customers' requirements are diverse. Depending on the machining process, we offer various coatings to enhance the machining result.
Whether extremely thin diamond HC coating or a multi-layer diamond coating, we have the right coating for your application.



ATORN® Compression milling cutter

VHM | h10 | h6 | DLC | Vc/fz | 761

- For fibre plastics
- **Counter-rotating chip flutes with chip breakers**
- Spiralisation change from left to right
- Axial cutting forces converge in the centre
- **Finishing quality (ra < 2 µm)**
- Simultaneously pulling and pushing cut
- **Surface Dia-HC-coated**

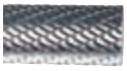
ATORN® Carbide rotary burs



3D PRINT | Vc/fz | 762

- **Similar to DIN 8033**
- **Shank Ø 6 mm**
- Solid carbide up to head Ø 6 mm, brazed from head Ø 8 mm
- Precision manufacturing on the latest CNC grinding machines guarantees exact and uniform cut with optimised cutting geometry
- For machining high-strength and tough materials as well as non-ferrous and lightweight metals
- Roughing and finishing on hand-operated machines
- Effective when used on stationary internal grinding machines and jig boring machines (milling and finish milling)

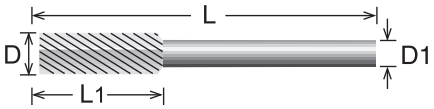
PFERD Carbide rotary cutter for fine machining

3D PRINT | Vc/fz | 761

Carbide metal rotary cutters with **MICRO teeth** are specially designed for **fine cutting** and are used in areas where grinding points are normally used. They offer a higher cutting performance and produce a high-quality surface finish, particularly compared with conventional milled surfaces. At the same time, they are **low vibration and produce little noise**. They retain their geometry throughout their entire service life. They are ideally suited for machining tasks during manual and machine use.



Advantages:
- High-quality surface finish
- No change in geometry due to wear and tear compared to grinding points
- Machining of almost all materials up to 68 HRc

Machining tasks:
- Fine machining
- Very fine plaster work
- Corrections to tool and mould making
- Sharpening of cutting tools

Machinable materials:
- Steel and cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

Recommendations for use:
- Where possible, use the tools on high-performance drives with flexibly-mounted spindles to avoid vibrations.
- To ensure the efficient use of rotary cutters, work at high rotational speeds/cutting speeds. Performance recommendation for tool drives:
  - Shank Ø 3 mm: 75 to 300 watt
  - Shank Ø 6 mm: from 300 watt
- Please observe the recommended speeds.

Suitable tool drives:
- Flexible shaft drives, straight grinders, robot applications, tool machines

ATORN® RockTec complete range for materials up to 52/65 HRc

INFO

- For all instances of machining and usage, you now get a complete ATORN range of solid carbide end milling cutters, solid carbide torus milling cutters and solid carbide radius milling cutters.
- **Diameter range from Ø 0.1 – Ø 20 mm**
- The different geometries are matched to different milling operations.
- **Cutting material: solid carbide ultra-micrograin of high hardness and extreme toughness**

Over 660 innovative solid carbide milling tools

	Ø-range mm	RockTec 52	Page	RockTec 65	Page

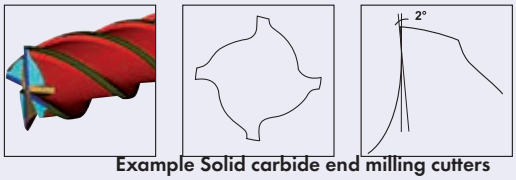
ATORN® RockTec Highest efficiency through new coatings

INFO

ATORN milling tools offer the best conditions for the efficient machining of materials up to 65 HRc.
Through a special cutting-edge treatment, as well as the new coatings, you achieve the highest machining performance, precision and durability.

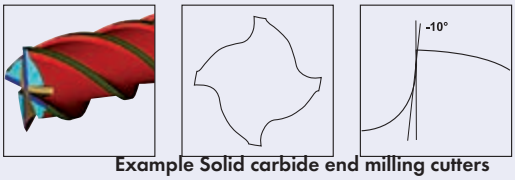
RockTec 52

Cutting material:	Ultra-superfine grain
Grain size:	0.005 mm
ISO quality:	K 10/K 40
Coating:	AlTiN (monolayer PVD)
Layer thickness:	2.5 ~ 3.5 µm
Micro-hardness:	(HV 0.05) 3,300
Application temperature:	≥ 900 °C
Friction coefficient:	0.25



RockTec 65

Cutting material:	Ultra-superfine grain
Grain size:	0.005 mm
ISO quality:	K 10/K 40
Coating:	TiSi-based (multilayer PVD)
Layer thickness:	2.5 ~ 3.5 µm
Micro-hardness:	(HV 0.05) 3,600
Application temperature:	≥ 1,200 °C
Friction coefficient:	0.3



Tools up to 52 HRc

Example Solid carbide end milling cutters

Helix angle:	40°
Rake angle on the external Ø:	2°
Core diameter:	65%

Tools up to 65 HRc

Example Solid carbide end milling cutters

Helix angle:	40°
Rake angle on the external Ø:	-10°
Core diameter:	65%

ATORN®

Advantages of hard machining

Save on costs – boost efficiency with hard machining

HSC HPC

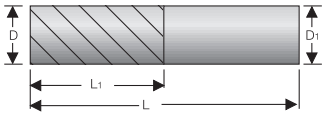
High flexibility

- Hard machining can replace grinding and EDM in many cases

Boost quality

- No heat warping due to subsequent tempering
- High-quality surface finish

Time savings



- Workpiece can be machined in one clamping procedure
- Fewer work-steps thanks to high machining volume

Discover maximum quality in all areas of tool and mould manufacture.

ATORN® RockTec 52 mini end milling cutter

VHM | 40° | h6 | DIN 6535 HA | Z 2 | AlTiN | Vc/fz | 722

- Short, stable design for machining materials **up to 52 HRc**
- Cutting edge tolerance: at Ø 0.1 – 0.7 mm = 0/– 0.012 mm, at Ø 0.8 – 0.9 mm = 0/– 0.020 mm
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle 3°

ATORN® Mini high feed-rate milling cutter RockTec 65

VHM | 25° | e8 | h6 | DIN 6535 HA | Z 4 | TiSiN | Vc/fz | 764

- 4 cutting edges
- **For machining materials up to 65 HRc**
- **For copy and line milling**
- **Very high machining volumes are achieved with special milling strategy**
- Solid carbide ultra-fine grain cutting material

ATORN®
High quality for great performance

ATORN® RockTec 65 mini torus cutter

VHM | 40° | h6 | DIN 6535 HA | Z 2 | TiSiN | Vc/fz | 763

- Long-necked version for machining materials **up to 65 HRc**
- Cutting edge tolerance: at Ø 0.1 – 0.7 mm = 0/– 0.012 mm, at Ø 0.8 – 3.0 mm = 0/– 0.020 mm
- Radius tolerance: 0/-0.01 mm
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle -5°~-7°

material: ● very well suited ○ well suited

ATORN® RockTec 65 mini radius milling cutter

VHM | 30° | h6 | DIN 6535 HA | Z 2 | TiSiN | Vc/fz | 765

- **With clearance**
- Long-necked version for machining materials **up to 65 HRc**
- Cutting edge tolerance: at Ø 0.1 – 0.7 mm = 0/– 0.012 mm, at Ø 0.8 – 3.0 mm = 0/– 0.020 mm
- Radius tolerance: 0/-0.01 mm
- **Cutting material: ultra-fine grain solid carbide**
- Rake angle -5°

material — ● very well suited ○ well suited

ATORN® RockTec PRO

INFO

TRUE, INHERENT POWER

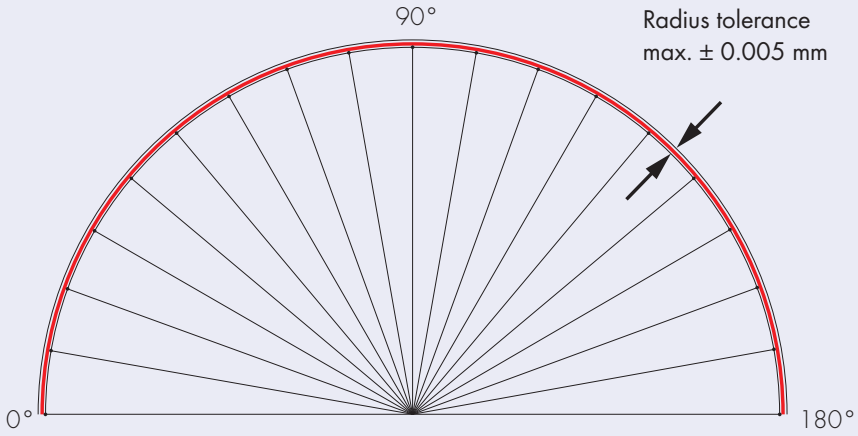
- **particularly suited to machining steels <1400 N/mm, <55 HRC, <60 HRC and <65 HRC**
- **wide product range, all geometries with maximum precision**
- **new TiAlSiN multi-layer coating, extreme hardness and minimal friction**

Hard machining is playing a growing role in tool and mould making and is increasingly replacing time-consuming processes such as grinding or eroding. But also in other sectors, components must still be reworked after hardening. This often poses enormous challenges for milling tools. And now, ATORN presents ultra-specialist milling tools for all conceivable milling applications.

These **high-performance tools** are optimally designed for hard machining **up to 65 HRC**.

Due to their optimised geometry and the new extremely hard multi-layer coating, ATORN RockTec PRO milling tools guarantee low abrasion and are therefore particularly wear-resistant.

For example, they can handle high-alloy tool steels such as 1.2379 at high feed rates up to 250 m/min and tooth feeds 0.001 to 0.15 mm.



Mini-radius milling cutter from Ø 0.1 mm

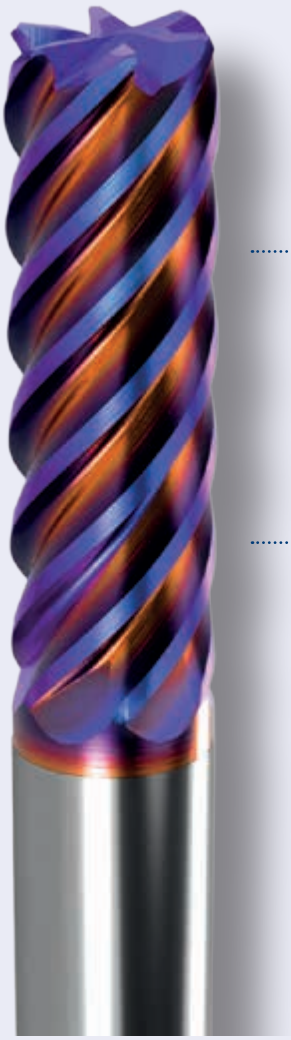
Clearance diameter	0 / -0.01 mm



Test Winner

RockTec PRO emerged the winner in a comparative test conducted by GFE Gesellschaft für Fertigungstechnik und Entwicklung Schmalkalden e.V. Set against the competition, RockTec PRO milling cutters proved themselves in hard milling trials.

A 1.2379 (X153 CrMo V12) tool steel with a hardness of 58 HRc was machined. This involved milling test tracks with defined ap and ae using different solid carbide milling cutters. RockTec PRO milling cutters exhibited the longest tool life overall and thus were Number 1 in the overall rating.

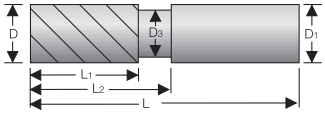
Test results
- low flank wear
- few nicks
- low edge build-up
- minimal coating wear

Front face
optimised radii and front face geometries

Spiral angle
for extremely soft cutting in hard materials

Cutting edges
relief-ground cutting edges

Geometry
reliable chip removal and consistently high process reliability



Coating
TiAlSiN multi-layer coating with extreme hardness

Cutting material
Micrograin solid carbide, especially for hardened steels

ATORN® Multi-flute milling cutter 90° RockTec PRO

VHM | 45° | f7 | h5 | DIN 6535 HA | Z 6 | Z 8+ | TiAlSiN | Vc/fz | 774

- For machining materials **from 47 to 65 HRc**
- Optimised geometry for hard machining
- **Cutting material: ultra micro-grain SC**
- state-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

ATORN® Mini torus milling cutter RockTec PRO

VHM | 30° | f7 | h5 | DIN 6535 HA | Z 2 | TiAlSiN | Vc/fz | 775

- For machining materials **from 47 to 65 HRc**
- Optimised geometry for hard machining
- **Cutting material: ultra micro-grain SC**
- state-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

ATORN® Torus milling cutter RockTec PRO

VHM | 30° | f7 | h5 | DIN 6535 HA | Z 4 | TiAlSiN | Vc/fz | 774

- For machining materials **from 47 to 65 HRc**
- Optimised geometry for hard machining
- **Cutting material: ultra micro-grain SC**
- state-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

material	● very well suited ○ well suited	steel			stainless steel			cast iron		titanium alloys	superalloys Fe/NiCo-based		aluminium		copper	graphite	hardened steel		
		< 700 N/mm²	< 1000 N/mm²	< 1400 N/mm²	ferrit./martens.	austenitic	duplex	GG/GTS	GGG		< 30 HRc	≥ 30 HRc	< 8 % Si	≥ 8 % Si	Cu-alloy	GRP/CFP/thermo.	< 55 HRc	< 60 HRc	≥ 60 HRc

ATORN® Mini radius milling cutter RockTec PRO

VHM | 30° | f7 | h5 | DIN 6535 HA | Z 2 | TiAlSiN | Vc/fz | 776

NEW · NUOVO · NY · NOUVEAU · NUEVO

- For machining materials **from 47 to 65 HRc**
- Optimised geometry for hard machining
- **Cutting material: ultra micro-grain SC**
- state-of-the-art coating technology for reduced wear and extreme hardness
- **Subject to process-related colour variations in the coating.**

material — ● very well suited ○ well suited

ATORN® Sealing surface milling cutter

VHM | e8 | h5 | DIN 6535 HA | Z 3 | TiAlN+ | Vc/fz | 773

- **For manufacturing concentric sealing surfaces for high-quality products**
- Only concentric milling contours
- No post-machining required
- Smooth surface
- Helix angle 30°

ATORN® Ceramics milling cutter

DIN 6535 HA | Z 4 | Vc/fz | 772

- Helix angle 15°
- For machining nickel-based alloys e.g. Inconel
- Always use air cooling
- Ensure continuous machining
- Do not remove the chips from the cutting area
- **Attention:** Tool, chips and workpiece can get very hot

ATORN® Curve segment milling cutter

INFO

r = Radius curve segment milling cutter / copy milling cutter
ae = line spacing
Rt = theoretical roughness

Reduction of workpiece costs and considerably shorter manufacturing times based on the significant increase in the line spacing ae.

$$ae = 2 \times \sqrt{r^2 - (r - R_t)^2} \quad [mm]$$

$$R_t = r - \sqrt{r^2 - \left(\frac{ae}{2}\right)^2} \quad [mm]$$

$$\rightarrow R_t \times 1000 \quad [\mu m]$$

ATORN® Circle segment milling cutter

VHM | Typ N | DIN 6535 HA | Z 4 | TiAlN | 3D PRINT | Vc/fz

772

- **Reduction of workpiece costs and considerably shorter manufacturing times based on the significant increase in the line spacing ae**
- **New manufacturing possibilities**
  - Undercuts
  - Semi-finishing and finishing of tight contours
  - Variable setting angle possible
  - Machining of tight inner radii
  - Freeform surfaces
- **Improved surface finish**
- Increased tool life

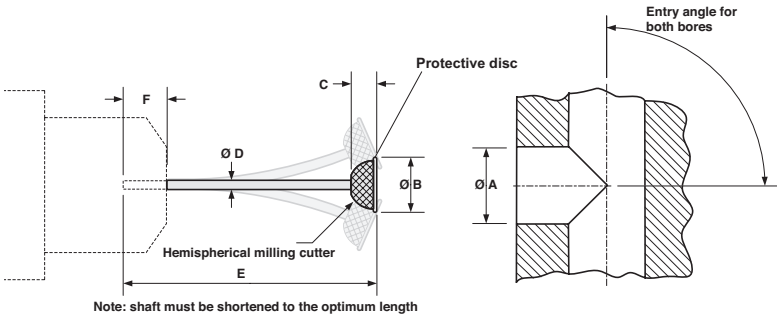
ATORN®
Performance demands quality

Orbitool deburring tool® for machining on the inside



791

- **Deburring tool system for intersecting bores**
- Can be used reliably in automated applications with CNC machines
- Fully integrated into the production process **from 2.0 mm bore diameter**
- Free of burrs with no manual finishing
- With the ORBITOOL®deburring tool, the deburring process is easy to control. Material abrasion only occurs on the edges of the workpiece. The (bore) surfaces are not touched thanks to the protective disc. Intact surfaces are not scratched and workpieces are not damaged. This makes work considerably easier, especially with precision parts. Once the protective disc has passed the edges, the cutting surfaces of the deburring tool can cut away material from the edges. Deburring is carried out as the milling cutter moves in a spiral through the axial bore to the centre of the radial bore. In the case of manual deburring with an electric grinding machine, the burrs are removed by forward and backward movements.

Advantages:

- Consistent results – consistent quality
- Increased throughput capacity/shorter cycle times
- Reduced deburring costs
- No additional deburring work required
- No backlogs in the machining process
- Ideal for CNC machining

Thread milling / circular cutting

INFO

Thread milling cutters are specially designed for use on CNC milling machines and machining centres which have 3-axis control with helical interpolation.

Advantages and application

- Male and female threads
- For through-hole and blind bore threads
- Synchronous and up-cut milling and change of the axial feed direction
- Enables production of straight and conical threads and of all standard thread variants
- Thread production with varying tolerances
- Optimal clamping
- Short chips
- Low cutting pressure

HM quality AMT7

TiAlN-coated ultra-fine grain quality for universal applications with all materials at medium to high cutting speeds

ATORN® Thread milling cutter for high-speed machining

VHM | Z 3 | Z 4 | Z 5 | Vc/fz | 778

- Low adhesion to the cutting edges
- **Thread length 2 x D**
- Optimised carbide metal types for aluminium, cast iron and stainless steels
- With internal cooling
- Extremely smooth cutting edge
- For thread with highest surface quality

Especially for aluminium

ISO with internal coolant supply

- * Without internal cooling

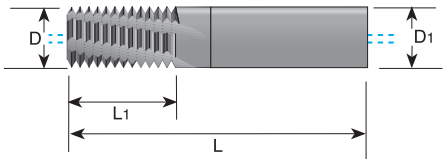
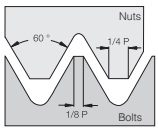
ATORN®
Performance demands quality



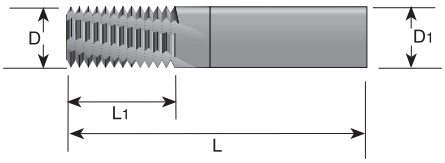
ATORN® Thread end milling cutter

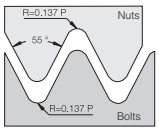


VHM | Z 3 | Z 4 | Z 5 | Z 6 | Vc/fz 777

- The thread is machined in just one operation
- Chip flutes permit an easy cut
- Short machine times thanks to multiple (3-6) cutting edges
- Operating range from dimension D = 2.2 mm
- Allows thread cutting in blind bores up to the shoulder
- One tool for right-hand and left-hand threads
- One tool for material groups P, M, K, S and H
- Excellent surface finish quality
- Long service life due to special multi-layer coating
- Low cutting pressure makes it possible to machine thin-walled workpieces
- **Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications**
- **Through-hole version (internal cooling outlet in flute) available on request!**

Solid carbide thread end milling cutter for the following thread types available on request:
-UN
-BSPT
-NPT
-NPS
-NPTF
-NPSF
-external threads, metr. full profile
-external threads, UN





Metric, full profile, ISO 60°, internal, with internal coolant supply

ATORN® Thread end milling cutter for small bores

VHM | Z 3 | Z 4 | Z 5 | HSC | Vc/fz | 777

- **Especially for small bores, with straight shank**
- Thread cutting from M1 x 0.25 mm, **thread depth up to 2 x D1**
- **Version for thread depths up to 3 x D1 available on request**
- Suitable for HSC, extremely low cutting pressure, excellent surface finish quality
- Allows thread cutting in blind bores up to the shoulder
- Long service life due to special multi-layer coating
- One tool for right-hand and left-hand threads
- **Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications**
- **MTSH version for hard machining up to 62 HRc available on request!**

ATORN® DMT drilling and thread milling cutter

VHM | Z 3 | Z 4 | Vc/fz | 777

Drilling
Thread milling
Chamfering

- **High-performance tool with IC for manufacturing female threads**
- Using a circular motion, you cut the tapping hole, mill the thread and countersink in a single operation
- Eliminates the need to pre-drill the tapping hole
- Fast turnaround reduces your machine times
- Suitable for through-holes and blind bores
- **No time wasted on tool changes as only one tool is used for drilling, thread milling and chamfering**
- Full profile tool
- **Anticlockwise spindle rotation, code M04: Left-hand thread = reverse rotation Right-hand thread = synchronous rotation**
- Can be used with a large variety of materials
- **Thread depth 2 x D**
- **Cutting material: AMT7 solid carbide, multi-layer TiAlN coating for universal applications**

Metric, full profile, ISO 60°, internal

SARA® Thread end milling cutter

VHM | Z 3 | Z 4 | Vc/fz | 777

NEW · NUOVO · NEU · NY · NOUVEAU · NUEVO

- Thread cutting from M1.6 x 0.35mm to M36 x 4
- **Thread depth 3 to 5 x D**
- HSC-suitable, extremely low cutting pressure, excellent surface quality
- Thread cutting in blind holes possible up to the shoulder
- long service life thanks to special multi-layer coating
- one tool for right-handed and left-handed threads

Metric, full profile, ISO 60°, internal

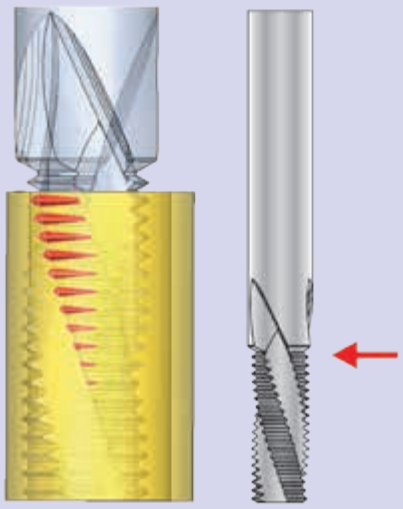
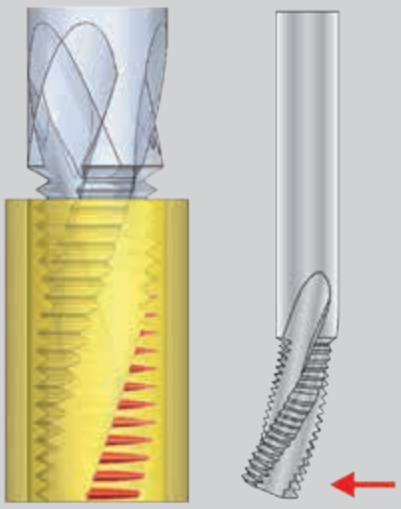
... without shrinkage

ATORN®
High quality for great performance

1-cut thread milling cutter *AT-1*





INFO

1. The **unequal pitch** and **irregular spiral angle** reduce vibrations.
2. The **left-hand twist** prevents lateral deflection.
3. New **EgiAs coating**: Outstanding wear resistance and robustness
4. **Ultra-fine carbide** with high resistance and durability

The secret of 1-cut machining:

Evolution from 2-cut machining to 1-cut machining, Minimised lateral deflection

AT-1 Left-hand twist	Conventional thread milling cutter Right-hand twist
	
Enters the material at the top end **Reduced deflection** Up-cut milling recommended	Enters the material at the bottom end **Strong deflection**

1-cut thread milling cutter AT-1

VHM | DIN 6535 HA | Z 4 | Z 5 | Z 6 | Vc/fz | 778

- Evolution from 2-cut machining to 1-cut machining
- Unequal pitch and irregular spiral angle reduce vibrations
- Left-hand twist prevents lateral deflection
- New EgiAs coating
- Outstanding wear resistance and robustness
- Ultra-fine carbide with high resistance and durability
- Milling cutter for female threads
- For hardened materials of 25-45 HRC

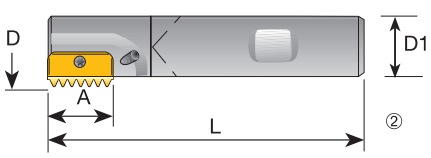
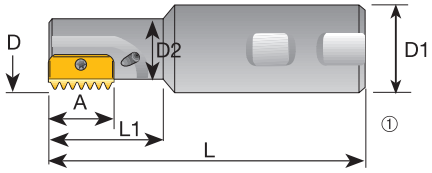
ATORN® Holder for thread mill inserts

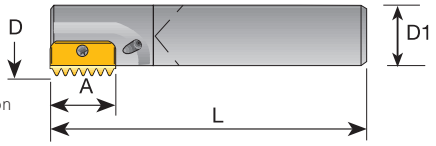




779

- **With internal cooling**
- Supplied with clamping screw and chuck key
- **Force-fit insert seat due to 15° bevel on the milling insert**

Standard holder



- Straight shank in accordance with DIN 1835B
- Holder SR0009H12 not for use with the following inserts: 12-18 NPT/NPTF, 12-19 BSPT
- Holder SR0018H21 not for use with the following inserts: 21 I34 ISO, 21 I8 UN, 21 I7 UN, 21-11 BSPT, 21-11.5 NPT, 21-11.5 NPTF
