ATORN® Tool system for machining drill holes MINI-MILL

DIN 6535 HA | DIN 6535 HB | Vc/fz | 786

- Type ZH 22 **from bore Ø 22 mm**
- Solid carbide inserts, quality grade **HC 8620**
- **Solid carbide milling cutter shank** with internal coolant supply
- **Steel milling cutter shank** with internal coolant supply
- 3-rib toothing
- For machining grooves, circlip grooves, ISO metric threads, Whitworth pipe threads and full radius grooves, as well as for chamfering and deburring

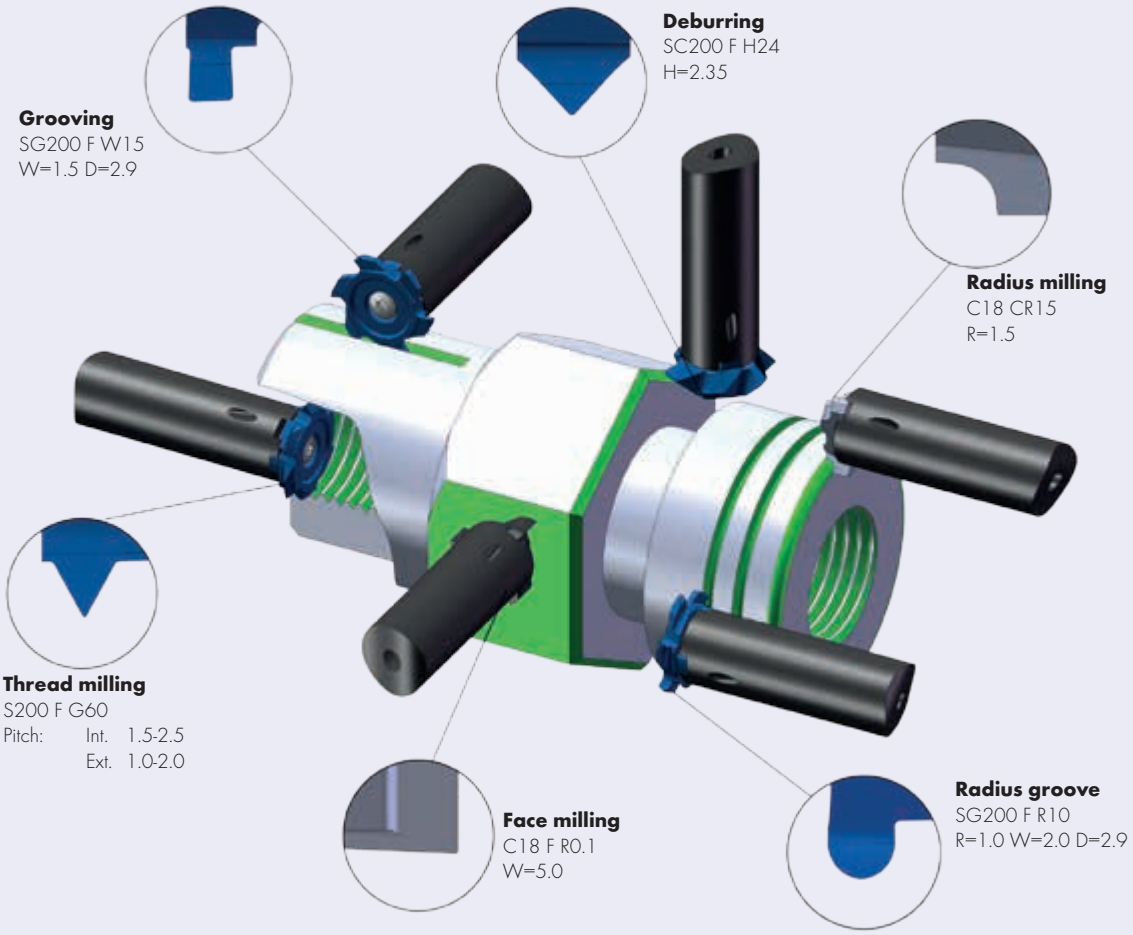
ATORN® The CMT system

INFO

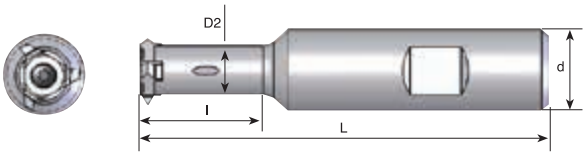


Removable, vertical thread-mill inserts and holders for a variety of thread profiles

- Front-mounted plate for high precision and excellent performance
- Milling with high cutting rates and perfect surface finish
- Stable and precise clamping for consistent reproducibility
- Same plate for right-hand and left-hand threads
- Tool holders with Weldon shank and internal cooling
- Plates for countersinking, grooving and face milling

One holder for all machining situations

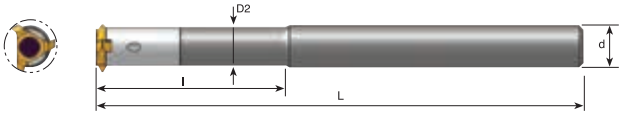
SRC 2018 J with internal coolant supply



ATORN® CMT tool system for vertical thread milling

DIN 6535 HB | DIN 6535 HA | Vc/fz | 786

- **Type C10, from Ø 11 mm bore**
- **Solid carbide cutting inserts in quality grade AMT7 for all materials up to 55 HRc**
- **Solid carbide cutting inserts in quality grade AMT8, extremely heat-resistant, for all materials up to 62 HRc**
- Solid carbide milling cutter shank with internal coolant supply
- Steel milling cutter shank with internal coolant supply
- **For partial profile (55 and 60°), full profile (ISO, UN and G55°) and trapezoidal threading, countersinking, grooving, plunge milling, face milling and finishing**



DIN 6535 HB steel shank with internal coolant supply

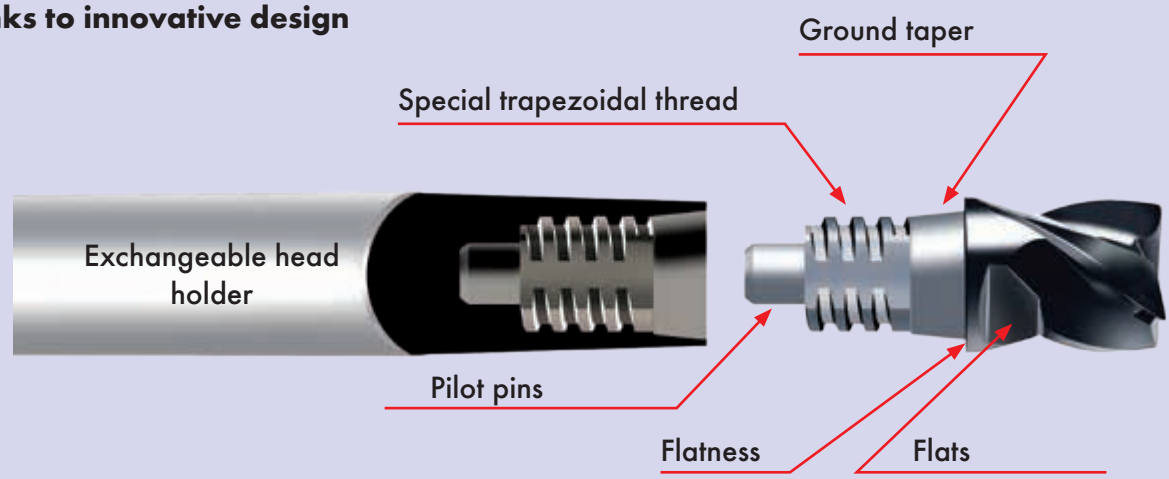
ATORN® Modular milling system

INFO

Properties



- Low tooling times
- A wide range of geometries
- Various shank shapes
- Diameters from 10 to 20 mm

Advantages

Reduced costs

- High true-running accuracy < 20µm
- High stability and stiffness thanks to pilot pins
- Low-vibration
- Guaranteed repetition precision

Perfect friction and form fit thanks to innovative design

A modular system for a wide range of tasks

- For ISO material groups P, M, N, K, H
- For roughing and finishing all contours
- Optimal for series production
- Particularly suitable for multiple-spindle automated lathes without tool changer and lathes with driven tools

Cost advantages

- Replacement of the head, shank remains clamped
- Up to 50 change cycles per shank possible
- Replaceable heads can be resharpened
- Quick change
- Reduced auxiliary processing times

Modular milling system

ATORN® 45° end milling cutter, SE.T 1204

- **For ISO milling inserts, type SE.T 1204**
- Highly positive rake angle
- Weldon shank
- Easy-action, low-noise milling
- Large insert thickness
- For plunge milling and face milling
- Supplied with clamping screws and wrench
- Can be used on machines with low drive power and in unstable conditions
- **Cutting angle:** Tool cutting edge angle 45°, axial rake angle 16°, radial rake angle -6°

ATORN® 45° face milling cutter

787

- **For ISO milling inserts, SN.X 1206, SNMU 1260, ONMU1205**
- Innovative double-sided indexable cutting inserts with large rake angle, use of eight cutting edges (SN_X, SNMU)
- Innovative double-sided indexable cutting inserts, use of sixteen cutting edges (ONMU)
- Easy cutting action with low machining force
- Excellent surface finish
- Very broad range of applications
- Use on many metals including steel, stainless steel, cast iron and aluminium
- Supplied with clamping screw and wrench
- ap max. 5.5 mm (SN_X, SNMU)
- ap max. 3.0 mm (ONMU)

ATORN® 45° face milling cutter

- **For ISO milling inserts, type SE.N 1203**
- Highly positive cutting edge geometry
- Easy cutting action
- Also for machines with low drive power or unstable conditions
- Wedge for fast and reliable clamping of the indexable insert
- Supplied with clamping screws and wrench
- from Ø 160 mm with sealing washers
- **Cutting angle:** Tool cutting edge angle 45°, axial rake angle 20°, radial rake angle -4.5°

Ø 160 to 250 mm with sealing washers

ATORN® Face and copy milling cutter (OCKX, XCKX, RCKX)

789

- **Can be fitted with octagonal, double-hexagon or round milling inserts**
- High feed rates and smooth operation
- Low power requirements due to small number of teeth
- Allows axial and diagonal plunging, well suited to excavation and pocket milling
- Directly-pressed indexable insert with 8 or 12 effective cutting edges
- Stable insert seat, anti-twist protection and defined indexing possible
- Indexable insert with rotational direction index, reliable production and high usability

- Ø 125 mm without internal coolant supply

- **For ISO milling inserts, SEMT 13T3 / SEGT 13T3 / XEHW 13T3**
- **Internal cooling up to Ø 125 mm**
- High productivity from finishing to roughing
- Excellent surface finish
- Very broad range of applications
- Universal application for steel, stainless steel and cast iron
- Supplied with clamping screw and wrench
- **Now also with indexable cutting insert for non-ferrous materials**
- **ap max. 6 mm**

Compatible with: SANDVIK Coro Mill® 245, MITSUBISHI ASX445, SUMITOMO WGC

SARA® 90° end milling cutter

The affordable alternative

- **For ISO milling inserts, type AP.. 1003**
- Easy cutting action due to the positive installation position of the indexable insert
- Tools deliver smooth milling performance
- Axial run-out max. 0.03 mm
- Radial run-out max. 0.03 mm
- For groove milling and side milling
- Precise 90° corner milling
- Shank according to DIN 1835B
- Supplied with clamping screws and wrench

ATORN® 75° face milling cutter

- **For ISO milling inserts, type AP..1003**
- Also ideal for indexable inserts that are already worn from use in 90° shoulder milling cutters or 90° end milling cutters. Worn inserts can be reused by utilising the unworn cutting edges.
- Supplied with clamping screws and wrench

ATORN® End milling cutters 4-10 Power

790

- **For ISO milling inserts, type LN.X 100605 PNR**
- **Internal coolant supply**
- **For face milling, shoulder milling, straight-line edge milling and groove milling**
- Multi-functional milling tool system with **4 cutting edges** on a **double-sided indexable cutting insert**
- High tool life quantities due to low machining forces
- Special chip shape geometry allows low power consumption due to a large rake angle despite the thick cutting edge
- With the new carbide types, the chip geometry ensures consistently high tool life quantities
- Nickel-plated design for high wear-resistance and increased base body service life

ATORN® Screw-in milling cutter 4-10 Power

790

- **For ISO milling inserts, type LN.X 100605 PNR**
- **Internal coolant supply**
- **For face milling, shoulder milling, straight-line edge milling and groove milling**
- Multi-functional milling tool system with **4 cutting edges** on a **double-sided indexable cutting insert**
- High tool life quantities due to low machining forces
- Special chip shape geometry allows low power consumption due to a large rake angle despite the thick cutting edge
- With the new carbide types, the chip geometry ensures consistently high tool life quantities
- Nickel-plated design for high wear-resistance and increased base body service life

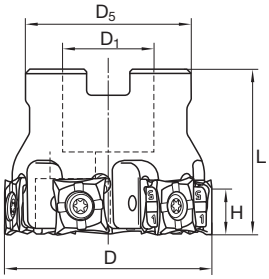
Tangential Milling Cutters

INFO

- **Process reliability due to tangential installation position**
  The tangential installation position of the indexable cutting inserts provides some special features. The favourable contact surface and clamping force conditions ensure maximum stability. The tools are therefore extremely reliable even at high cutting performance.
- **Efficiency due to good cutting properties**
  The stable indexable cutting inserts have a positive rake angle, resulting in excellent cutting performance and low power consumption of the machine. This significantly increases the service life of the cutting edge. This has a direct and positive effect on tool costs.
- **Cost savings thanks to reduced cycle times**
  The ratio of tool diameter to the number of teeth, combined with high achievable feed rates, facilitates enormous removal rates. This results in significantly shorter cycle times, which considerably reduces the total process costs and cost per part.



ATORN® Tangential shoulder milling cutter 90°

809

- Process reliability due to tangential installation position
- **8-blade indexable insert for high efficiency**
- Efficiency due to good cutting properties
- Cost savings thanks to reduced cycle times
- For roughing and semi-finishing operations / steel and cast iron machining
- **Infeed depth ap max. = 10 mm**
- up to Ø 125 mm with internal cooling

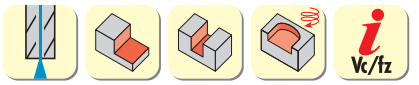
ATORN® High-speed milling cutters range

INFO

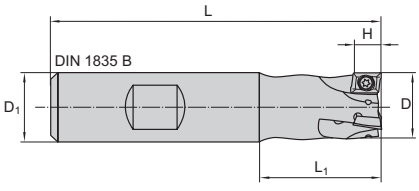


Exactly 90°

- Shoulder milling at exactly 90° in steel, cast iron, stainless steel and non-ferrous materials
- Extremely smooth running with low power consumption
- Large selection of base bodies and indexable cutting inserts
- Indexable cutting inserts in four sizes with different corner radii
- Extra-long end milling cutters for deep cavities
- Cutting depths of up to 16.5 mm
- High feed rate due to the large number of thread ridges
- Soft cut due to extremely positive geometry and irregular pitch
- All milling cutters have an internal coolant supply and have been surface-treated

Indexable insert designation	Features	Chip shape levels
ADKX	Universal indexable cutting insert geometry with circumferential protective chamfer for machining steel and cast iron materials as well as stainless steels	 -SR -SR-TR
ADHX	Special ground indexable cutting insert geometry with polished face and sharp cutting edges for machining non-ferrous materials (aluminium, soft copper alloys and plastics)	 -FR-ALC

ATORN® 90° end milling cutter



801

- **For milling inserts, type AD..X 06..**
- Easy cutting action due to the positive cutting edge geometry
- Tools deliver smooth milling performance due to irregular pitch
- Precise 90° shoulder milling
- **Internal coolant supply**
- Shank according to DIN 1835B
- Precision-sintered milling inserts (ADKX)
- Precision-ground milling inserts (ADHX) for maximum accuracy

High feed-rate milling cutters are not only able to achieve longer service lives and greater removal rates, but also minimise production costs and processing times. It differs from high-speed machining, which is used primarily for finish machining with outstanding surface qualities, in the sense that high feed-rate milling predominantly offers short machining times for roughing. Special high feed-rate geometries were developed for this, which generally possess large radii. Thus the axial feed ap is limited somewhat.

Depending on the reduced setting angle K (Kappa), the radial cutting force "F_r" on the milling cutter and on the machine spindle is significantly reduced, allowing very high tooth feeds to be achieved without issue (Image 1). Tooth feed rates of up to f_z = 5 mm are already used for machining steel. However should the axial force F_a increase in high feed-rate milling, this is not disruptive as it is absorbed directly by the tool and the machine spindle and in no way causes significant deformation or damage.

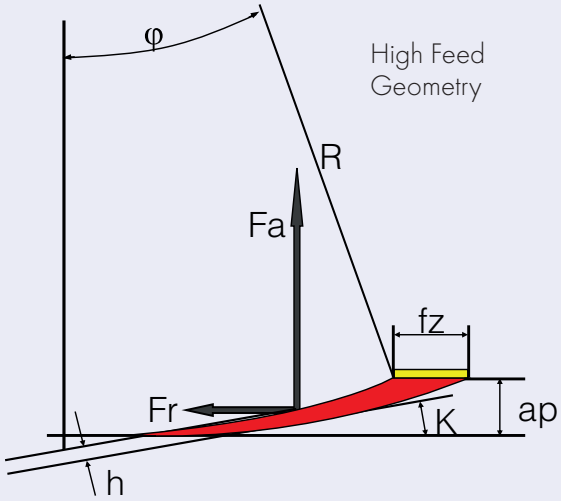

Image 1

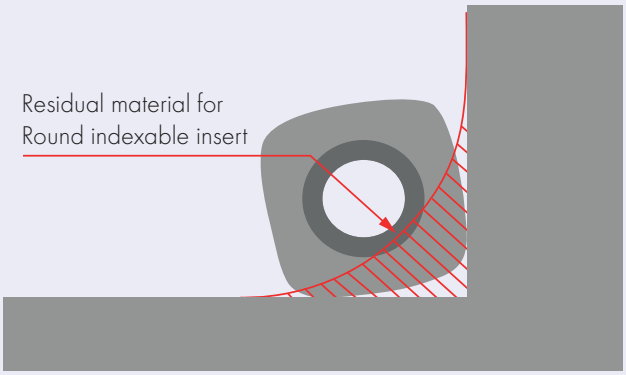

Image 2

The special indexable insert geometry for high feed-rate milling helps to minimise the residual material during roughing tasks and thus improves the prerequisites for the subsequent finish machining. Image 2 illustrates the reduced residual material compared to machining with round indexable inserts.

ATORN® High feed-rate screw-in milling cutter XDM.

790

- **For milling inserts XDM.. 09**
- 2-edged, small, extremely robust indexable insert
- Positive geometry for easy cutting
- **High material removal rate, even with less powerful machining centres**
- Long service life thanks to nickel-plated design
- **High feed rates achievable**
- Uniform size of indexable cutting inserts

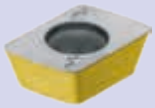
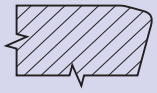
ATORN® High feed-rate milling cutter XDM.



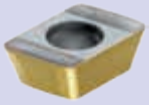
INFO

The ATORN high feed-rate milling cutter is used for roughing small and medium-sized components. The positive high feed-rate geometry of the standard, small indexable inserts allows for the maximum material removal rate, even on low-output machining centres.

Two different insert geometries in two different types of cutting material ensure that virtually all standard materials used in tool and mould making can be machined.

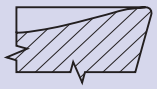


The Mini system is available as a screw-on milling cutter in diameters 16-42 mm with 2-6 cutting edges, and as a shell-type milling cutter in diameters 40-80 mm with up to 9 cutting edges. All cutting edges have an internal coolant supply. Only one indexable insert size is required for all tool diameters.



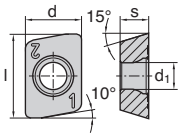
Chip shape levels

XDMW
- Stable indexable cutting insert geometry for cutting high-strength tempered and tool steels
- Negative protective chamfer with cutting edge rounding



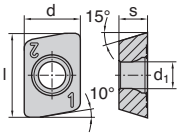
SR

XDMT
- Soft-cutting indexable cutting insert geometry for reduced cutting forces
- Use in unstable setups
- Particularly suitable for tool machines with low drive output



ER

ATORN® Milling inserts XDM.. 0903



- **HC4640**
  Ideal for high feed rates, tough carbide substrate with double PVD coating and outstanding suitability for roughing, with additional TiN layer around circumference for improved wear detection
- **HC4410**
  Wear-resistant superfine grain substrate for high machining capacity, universally suitable for high cutting speeds in steel at reduced feed rates
- **HC4544**
  Special superfine grain substrate for high machining capacity with stainless steel materials

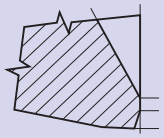
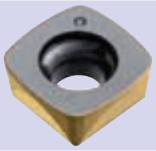
ATORN® High feed-rate milling cutter

INFO

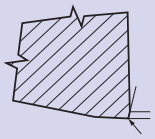
- Roughing of smooth surfaces and cavities with high feed rates
- Machining of cavities by linear and circular interpolation
- Plunge milling even in unstable conditions
- Use of the same CAD/CAM programs as for milling with circular indexable inserts
- Can be used on traditional and modern high-performance machines
- High material removal rates and cost-effective machining of moulds, dies and other components
- Efficient machining even on low-performance machines
- Heat dissipation through the chips, so that heat-sensitive workpieces can be machined





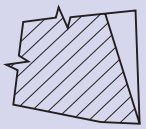
Chip breaker

XCNT
- Universal geometry for a wide range of applications
- Wide negative protective chamfer for increased cutting edge stability
- Ideal for use on high-performance machines

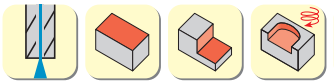


-SN-TR

XCNW
- Stable geometry for cutting high-strength tempered and tool steels
- Negative protective chamfer with cutting edge rounding

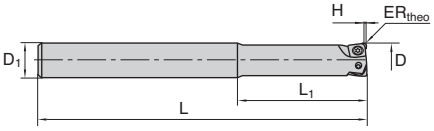


-SN



XCNT
- Soft-cutting geometry for reduced cutting forces
- Used with stainless steel and long-chipping materials
- Particularly suitable for machine tools with low drive output

-EN-TR



ATORN® High feed-rate milling cutter XCN.

791

- **for milling inserts, type XCN.. 07**
- 4-cutting-edge, extremely robust indexable inserts
- Deep cutting troughs with cutting surface topography
- **Irregular pitch for low-vibration milling even for high exposed lengths**
- Long service life thanks to nickel-plated design
- **Wide range of applications**

- **for milling inserts, type XCN.. 07**
- 4-cutting-edge, extremely robust indexable inserts
- Deep cutting troughs with cutting surface topography
- **Irregular pitch for low-vibration milling even for high exposed lengths**
- Long service life thanks to nickel-plated design
- **Wide range of applications**

palbit Copy milling cutter TOROMILL 25290 / 25390

802

- For copy milling, radius cutting and contour milling in die and mould production
- Suitable for diagonal or axial plunge milling thanks to the clearance of the round indexable insert
- Internal coolant supply
- 7° positive setting angle for moderate and heavy machining, long-chipping materials with lower power consumption

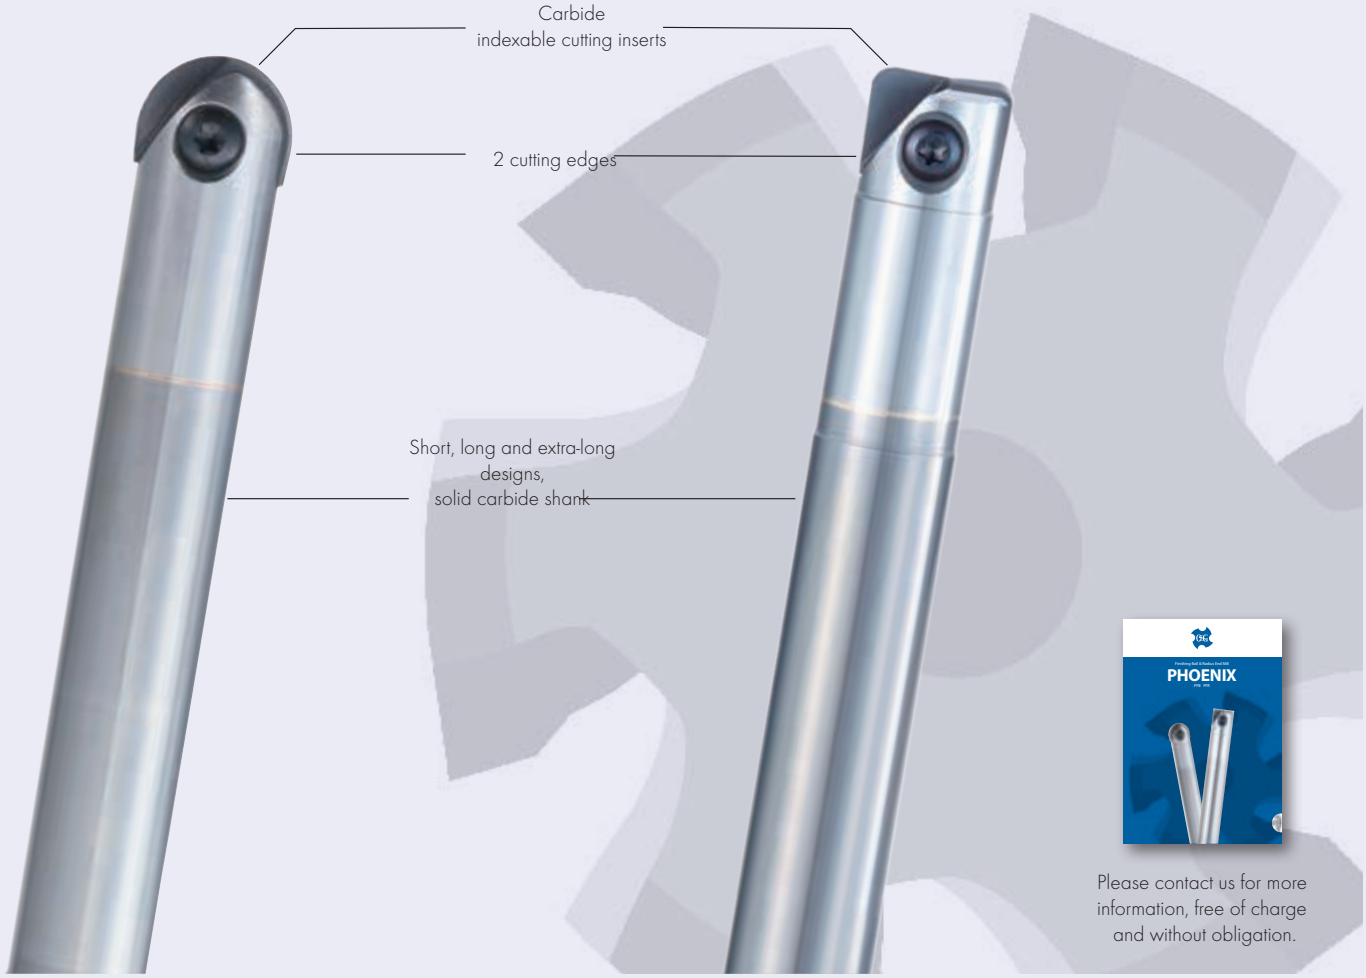
PHOENIX PFB ball-nose cutter and *PFR* torus cutter



INFO

- **PFB: Radius accuracy ± 6 µm**
- **PFR: Surface tolerance + 0 / - 20 µm, corner radius ± 8 µm**
- **Spiralled, stable and extremely sharp cutting edges**
- **Steel and solid carbide shanks**

Advantages
- Optimum surface finishes with short and long projection lengths
- Vibration reduction

Plain ball cutter *PHOENIX PFB*

Torus milling cutter *PHOENIX PFR*

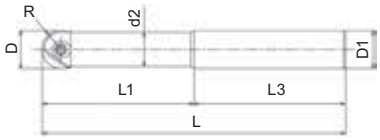
Ball-nose cutter PFB

806

- **Radius accuracy ± 6 µm**
- High performance
- Ball cutter for finishing
- 2 cutting edges
- **Spiralled, stable and extremely sharp cutting edges**
- Steel and solid carbide shanks
- Short, long and extra-long designs

Advantages



- Optimum surface finishes with short and long projecting lengths
- Vibration reduction

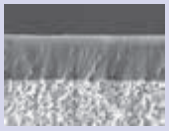
Geometries

PFB-SP
- Wide range of applications, from soft steel to superalloy
- Sharp but rigid cutting edge
- Outstanding wear resistance



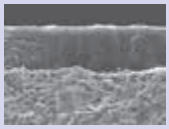
PFB-Q
- 220° full radius
- Effective cutting edge insert
- No straight cutting edge on the outside
- Wall milling without rattling

PFB-SH
- Milling of cast iron and hardened steel
- Reinforced indexable cutting insert
- High-grade resistant carbide

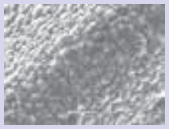
PFB-D
- Sharp cutting edges especially for milling graphite
- Diamond coatings for adhesive materials

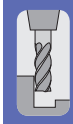
Qualities / Substrates

XP3320
- for dry machining of steel and stainless steel, as well as cast iron
- for wet machining of heat-resistant superalloy



XP3225
- Stable milling of various materials
- Excellent lubrication and wear resistance
- For wet machining of steel and stainless steel





XP3310
- Ideal for dry machining of hardened steel and cast iron
- Excellent heat and wear resistance

XC4505
- Machining of non-ferrous materials
- Optimal diamond coating for milling graphite

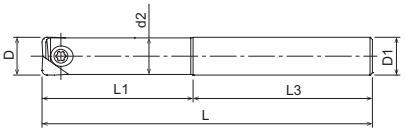
Torus milling cutter PFR



808

- **Radius accuracy ± 8 µm**
- High performance
- High measurement accuracy
- 2 cutting edges
- Steel and solid carbide shanks
- Short, long and extra-long designs

Advantages

- Optimum surface finishes with short and long projecting lengths
- Vibration reduction

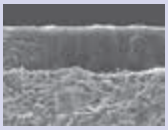
Geometries

PFR-ST
- Wide range of applications from soft to hard steel
- Positive rake angle
- Excellent sharpness and hardness

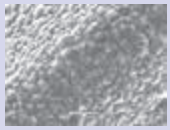
PFR-SH
- For milling cast iron, ductile iron and hardened steel
- Ultra-rigid cutting edge with two-dimensional negative chamfer
- For stable machining
- Especially for milling graphite

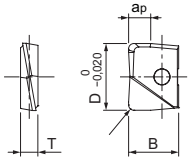
PFR-D
- Sharp cutting edges especially for milling graphite
- Diamond coatings for adhesive materials

Qualities / Substrates

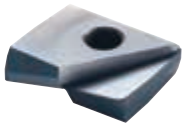


XP3225
- Stable milling of various materials
- Excellent lubrication and wear resistance
- For wet machining of steel and stainless steel





XP3310
- Ideal for dry machining of hardened steel and cast iron
- Excellent heat and wear resistance



XC4505
- Machining of non-ferrous materials
- Optimal diamond coating for milling graphite

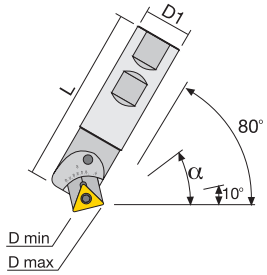
ATORN® Countersinking mill, adjustable



- **Adjustable from 10° to 80°**
- Universal indexable insert countersinking mill for chamfering, deburring and countersinking in fixed operating conditions. Cannot be used on drilling machines
- Stable, smooth operation
- Straight shank with driving planes in accordance with DIN 1835B in tolerance zone h6
- Scale tolerance ± 2.5°, please use a pre-setting device for precise adjustment
- Supplied with clamping screws and wrench

For ISO indexable inserts, type TC.. 1102

Push broaches (keyway broaches)

- For manufacturing true-to-size and precisely centred keyways in accordance with DIN 6885
- Can be used on normal workshop presses (hand press or hydraulic press); no special machinery required
- Low tooling time
- Good surface finish on machined workpieces
- Manufacturing time for one keyway only approx. 1 minute
- Broaches supplied with inserts for achieving the cutting depth
- Special alloy HSS steel for machining any materials with a hardness of up to 34 HRc
- Broaches with other rake angles are available on request for machining solid or very soft materials.
- Square and multi-purpose four square broaches are available on request.
- **From size 32 x 102, guide bush without collar**

- **Use:**
  1. Slide guide bush into workpiece bore and insert broach until the first tooth on the workpiece is standing upright
  2. Lubricate broach
  3. Push broach in approx. 1/3
  4. Briefly release plunger and push broach in fully
  5. Clean broach and fit insert for the second pass
  6. Repeat broaching operation

in bold = catalogue version

Correct toothing

Selecting the correct tooth pitch is essential to achieve the best possible cutting results:

- The tooth pitch is calculated from the working length of the saw band.
- Selecting too low a pitch can cause deviations in cutting, as chips may block the cutting teeth and force the saw band off its cutting line.
- Selecting too high a pitch can cause teeth to become bent, as the cutting pressure on individual teeth is too large.
- At least three teeth should be engaged to achieve cost-effective results.

in bold = catalogue version

If two or more pipes need to be cut alongside one another, take into consideration the doubled wall thickness when using the table.

Critical factors in choosing the correct tooth pitch:
- Sawing pipes and profile sections in layers and bandles
- Sawing pipes and profile sections individually

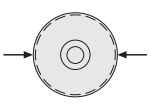
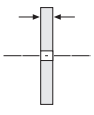
* = for high cutting speeds (from 1000 m/min) always use extra-tough saw blades!
When ordering, please indicate: machine speed or cutting speed and material to be cut.

All blades are laterally bevel-ground (hollow grinding).
All sizes from Ø 200 mm and very slim blades have a borehole collar for extra stability.
Accuracy, tooth form and lateral bevel grinding correspond to DIN 1840.



DIN 1837 A fine-toothed with Type A double helical tooth
- Straight teeth with relatively small tooth pockets
- For thin-walled workpieces and smaller cutting depths
- Ideal for machining brittle, short-chipping materials

DIN 1838 B coarse-toothed with Type B curved tooth
- Curved teeth with relatively large tooth pockets
- More universal than DIN 1837 A thanks to improved chip formation and increased chip space
- For stronger material and greater cutting depths



DIN 1838 C coarse-toothed with Type C curved tooth
- High-performance toothing (HZ) with taper tap and regroover
- The taper tap is 0.15-0.3 mm higher than the regroover and is tapered on both tooth corners.
- Thus both teeth share the task of machining.
- Ideal for separating workpieces with low to medium strength
- Excellent chip management is achieved by the chip-separating tooth form.

Manufacturing accuracy according to DIN and ISO for HSS metal circular saw blades

Diameter tolerance according to ISO

	Nominal dimension range mm

ATORN®
High quality for great performance

Calculation of HSS-E milling cutter

Note:

- Please use the tables on pages 20-14 to 20-17 to assign the materials to be machined.
- All milling specifications apply to a rigid setup, including clamping, sufficient machine output and applications of coolant.
- Please adjust these guideline values according to clamping operation and machine set-up!
- The feed (Vf) should be halved for milling in long version.

1. Table

ATORN® HSS-E-PM-milling cutter — Groove milling

- Please adjust these guideline values according to clamping operation and machine set-up!
- The guide values apply for the TiAlN-coating version; for uncoated tools the cutting speeds must be reduced by 20-30%.

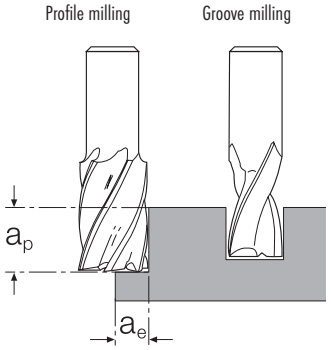
Calculation: solid carbide end milling cutter

Note:

- Please use the tables on pages 20-34 to 20-35 to assign the materials to be machined.
- All milling specifications apply to a rigid setup, including clamping, sufficient machine output and applications of coolant.
- Please adjust these guideline values according to clamping operation and machine set-up!
- The feed (Vf) should be halved for milling in long version.

1. Table

Please see Table 1 for the cutting speed of the respective material.



ISO	Material	Hardness HB	Tensile strength N/mm²	Cutting speed Vc m/min.

Solid carbide high-performance end milling cutter

251033....

- Note:
  The recommended cutting data are guide values for conventional roughing and assume stable machine conditions, low-vibration workpiece clamping and the application of suitable cooling lubricant. The cutting speed Vc can be increased by 20% for finishing. For full slot milling we recommend reducing the cutting speed Vc by approx. 15% and the feed Vf mm/min by 30%.

ATORN® Mini radius milling cutter RockTec 52

- The lower Vc values apply respectively for long clearances and the smaller diameter range; the higher Vc values for short clearance lengths and the larger diameter range. This also applies for the specified ap max. value.
- Please adjust these guideline values according to clamping operation and machine set-up!

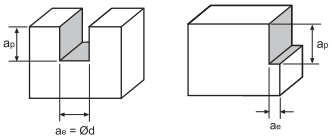
Feed correction f2 = 1		
Roughing	ae = 0.1 x D	ap = max. L1
Finishing	ae = 0.1 x D	ap = max. L1
Feed correction f2 = 0.6		
Roughing	ae = 0.1 x D	ap = max. L1
Finishing	ae = 0.3 x D	ap = max. L1

Feed correction	**f2 = 0.3**	**f2 = 0.5**
1 x D bore depth and then longitudinal slot milling	Drilling	Milling

ae = radial cutting depth
ap = axial cutting depth
D = milling cutter diameter
L1 = cutting edge length

The respective feed rate is calculated as follows:
Vf = fz x z x n x f2

ATORN® End milling cutter Ultra-N



- The specified values apply to ae < 0.5 x D and ap 1 x D.

Cooling = emulsion

Over 180,000 tools available online!

Advantages:
- convenient, clear and fast
- order by 19:30 for next-day delivery
- order measuring instruments including calibration
- available in real time
- in 8 languages

Register online now!

ATORN® Thread milling inserts

259001 ....
259002 ....
259003 ....

ATORN thread milling cutters are specially designed for use on CNC milling machines and machining centres which have 3-axis control with helical interpolation.

Advantages and application

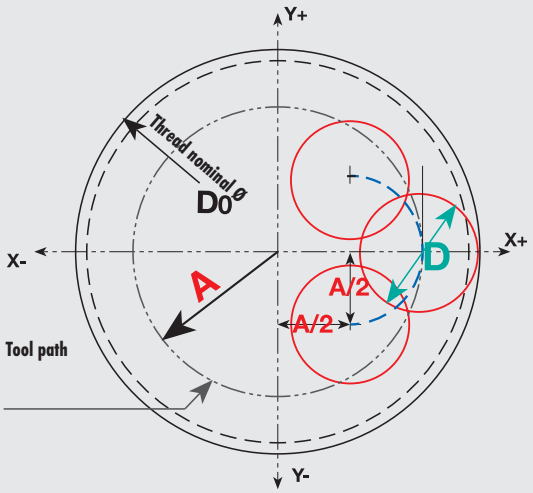
- External and internal threads
- For through-hole and blind bore threads
- Synchronous and up-cut milling and change of the axial feed direction enables production of straight and conical threads and of all standard thread variants
- Thread production with varying tolerances
- Optimal clamping
- Short chips
- Low cutting pressure

Carbide quality AMT7

- TiAlN-coated ultra-fine grain quality
- for universal applications in all materials at medium to high cutting speeds

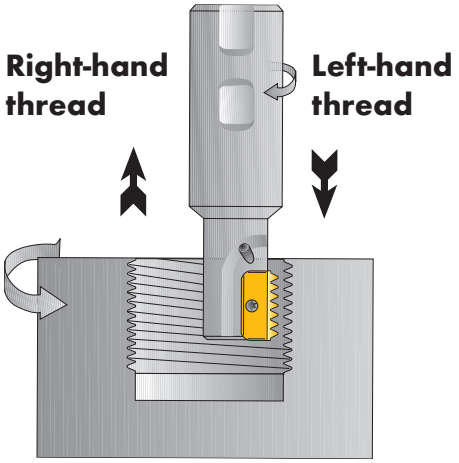
ISO		Cutting speed Vc m/min	Feed f mm/rev
P	Carbon steel	115 - 280	0.05 - 0.15
P	Alloyed steel	130 - 280	
P	High-alloy steel	105 - 180	
P	Cast steel	150 - 190	
M	Stainless steel	130 - 190	
K	Grey cast iron	80 - 170	
N	Non-ferrous metals, aluminium	180 - 34	

CNC Programming for internal threads



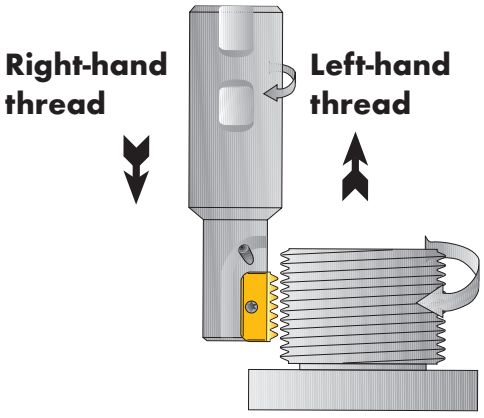
Upwards milling operation
(Programme is for use on CNC machining centres)

A = (D0 - D) / 2



A = radius of the tool path
D0 = thread nominal Ø
D = cutting Ø

Standard Programming
G90 G00 G54 G43 H1X0 Y0 Z10 S–
G00 Z-(thread depth)
G01 G91 G41 D1 X(A/2) Y-(A/2) Z0 F–
G03 X(A/2) Y(A/2) R(A/2) Z(1/8 x pitch)
G03 X0 Y0 I-(A) J0 Z(Steigung)
G03 X-(A/2) Y(A/2) R(A/2) Z(1/8 x pitch)
G01 G40 X-(A/2) Y-(A/2) Z0
G90 X0 Y0 Z0



Example
M32 x 2 (thread depth 18 mm)
Tool holder: SR0021 H21
(Cutting Ø 21 mm)
Insert: 21 I 2,0 ISO
A = (32 - 21) / 2 = 5.5
produces the following Programming:
G90 G00 G54 G43 H1X0 Y0 Z10 S2800
G00 Z-18
G01 G91 G41 X2.75 Y2.75 Z0 F85 D1
G03 X2.75 Y2.75 R2.75 Z0.25
G03 X0 Y0 I-5.5 J0 Z2
G03 X-2.75 Y2.75 R2.75 Z0.25
G01 G40 X-2.75 Y-2.75 Z0
G90 G0 X0 Y0 Z0

Internal thread

External thread

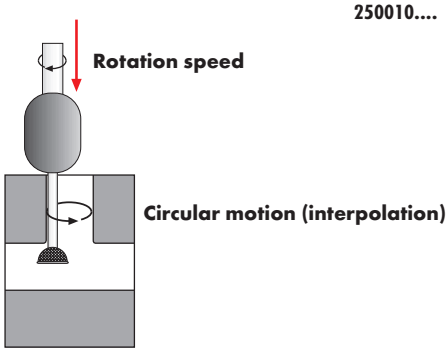
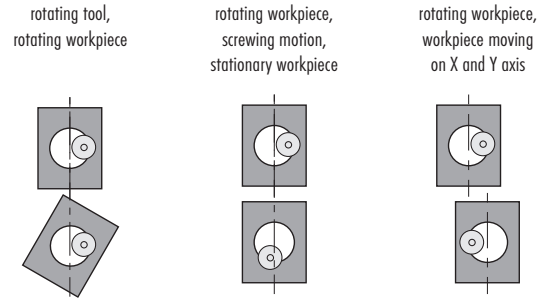
260126.... 260127....

Vc = 50-60 m/min. f = 0.03-0.05 mm/rev



Deburring tool Orbitool® for internal machining

250010.... 250011....



1. Rotational speed rpm
The tool rotates in a clockwise direction. The higher the rotational speed, the more material is removed. Limiting factors include the rotational speed of the machine spindle and the desired surface quality. The recommended rotational speed for ORBITOOL® DEBURRING TOOLS is between 2000 and 8000 rpm.
A lower rotational speed reduces vibrations and produces a better finish.
Harder materials require higher rotational speeds.

2. Feed rate
The feed rate determines the material removal rate and the form of the cutting edges of the intersecting boreholes. For softer materials, e.g. aluminium, smaller feed rates produce chamfers instead of a radius. Feed rates of 0.05 to 0.6 mm per circular motion of the tool are recommended.

3. Rotational speed of the circular motion
There are three options for moving ORBITOOL® DEBURRING TOOLS in the workpiece bore:
Recommended rotational speed range for the circular motion: 20 - 100 min^{-1}

The circular motion diameter calculation is:
D = Dh - Ds
D = diameter of the circular motion
Dh = diameter of the bore
D = ORBITOOL® DEBURRING TOOL end milling cutter diameter

Note
The abrasion capacity of the tool increases with the stiffness of the tool clamping. The flexibility of the tool shank allows almost universal application. However, if the shank lengths of the ORBITOOL® DEBURRING TOOL are too short, particularly with smaller shank diameters, this may cause permanent deformation of the tool shank. For delicate machining processes, sensitive surfaces or insufficient shank lengths, a flexible spacer (optional) can be used to remedy this. Threaded bores can also be easily deburred. The protective disc of the milling tool protects the thread profile from damage.

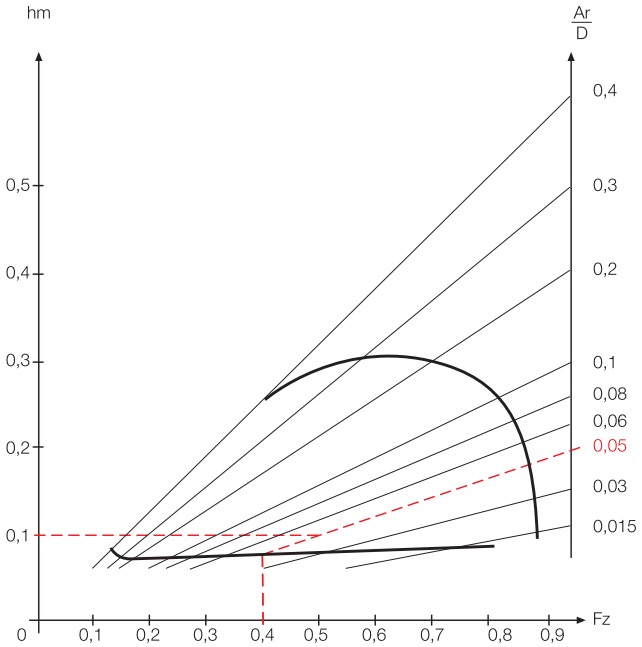
Recommended tooth feed fz with a_e = 0.6 x d1



ATORN® Disc milling cutter

262600.... 262610....

- The average **chip thickness hm** should be at least 0.1 mm to prevent the indexable inserts becoming worn quickly. For groove milling the chip thickness is much smaller than the feed per tooth. Thus the ratio between **groove depth Ar** and **milling cutter diameter D** must be observed. The average chip thickness and the corresponding minimum feed rate is illustrated in the following diagram.

Example: milling cutter Ø D 160 mm
Groove depth Ar = 8 mm
Ar / D = 0.05
Result: Feed per tooth fz = 0.4 mm

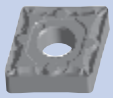
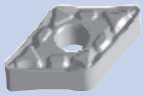
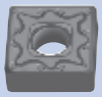
Summary of icons used for drilling tools

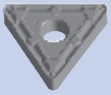
INFO

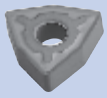
Cutting material	HM e.g.: carbide metal	CBN e.g.: cubic boron nitride	PKD e.g.: polycrystalline diamond
Coating	TiN Titanium-nitride coating	TiCN Titanium-carbo-nitride coating	TiAlN Titanium-aluminium-nitride coating
Standard	DIN 4951-4965 Complies with DIN 4951 - 4965		
Shank design	Corresponds to straight shank		
Thread	M e.g. metric thread	MF e.g. metric fine thread	BSW e.g. British Standard Whitworth
Thread angle	55° Thread angle is 55°		
Coolant design	With internal coolant supply		
Cutting data	i Vc/fz Further information such as cutting data recommendations is available in the technical appendix		











... with reversible option.

ISO indexable cutting inserts ceramic (0°)

Ceramic indexable cutting inserts are manufactured from an inorganic substance.
They are pressed into the mould and sintered using very fine and pure raw material.
The ceramic indexable cutting inserts are completely compacted in this process, thus ensuring:

- **resistance to breakage and wear**
- **longer tool service life thanks to outstanding wear resistance**
- **precise cutting and exceptional surface roughness**
- **greater cutting speed compared with carbide indexable cutting inserts**

Information on edge preparation:
T = chamfer; S = rounded chamfer
Other geometries, edge preparations and coatings are available on request.

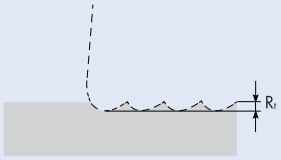
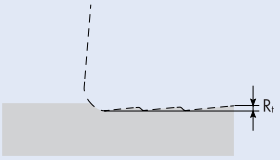
Technical Information CBN Indexable Cutting Inserts

INFO

CBN (polycrystalline cubic boron nitride) does not occur naturally. It is a synthetic material that is manufactured through a process of high temperature and pressure. When CBN cutting edges are soldered to a carbide insert, this creates a high-performance cutting tool.
CBN indexable cutting inserts are **brilliant for finishing and semi-finishing hardened steels (with 45 to 68 HRc)**, as well as hard cast iron and heat-resistant superalloys.

Qualities





PBY 603	PBY 620
low CBN content with medium grain size and ceramic binding	minimal CBN content with medium grain size and ceramic binding
high wear/abrasion resistance	improved crater/side wear resistance with an exceptionally balanced toughness
for continuous and partially interrupted cutting of hardened steel (H01-H10)	for moderate to severely interrupted cutting of all hardened steels (H10-H20)
finishing of abrasive, high-strength cast iron	
also suitable for machining heat-resistant superalloys (S10)	

Geometry selection

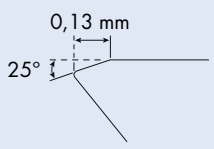
The indexable insert geometry and the edge preparation is extremely important in hard turning, as it has a significant impact on the tool service life and productivity. The PALBIT product range includes standard and WIPER indexable cutting inserts.

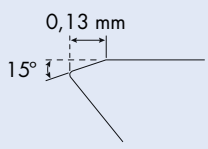
The standard indexable insert produces the lowest cutting forces and has the lowest stability requirements, while the WIPER indexable cutting insert creates high productivity and outstanding surface quality.

A large corner radius guarantees greater edge strength and thus ensures a longer service life of the indexable cutting insert. For this reason it is advised to select the greatest permissible corner radius for the respective process requirements.

Standard (r = 0.8 mm)	WIPER (r = 0.8 mm)
	
Surface roughness Ra = 0.81 µm	Surface roughness Ra = 0.42 µm

WIPER indexable cutting inserts provide two options in process improvement:



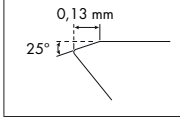


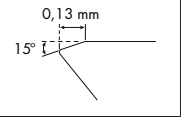
- improved surface quality with standard cutting data
- consistent surface quality with considerably higher feed rate.

Selection of cutting edge preparation

Defining the correct cutting edge preparation is the key criterion for the stability and service life of the cutting edges.
Selection is required to produce the best economic result.

Edge preparation S





- with chamfer and edge rounding
- first choice for hard turning parts
- stronger cutting edge, with greater resistance to nicks and breaks
- generates a uniform surface quality
- critical for uninterrupted cutting and when using large cutting depths
- The feed rate must be greater than the edge rounding.

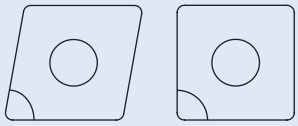
Technical Information PKD Indexable Cutting Inserts

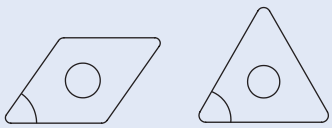
INFO

PKD (polycrystalline diamond) is a composite of diamond particles sintered with a metallic binding agent, which form one of the hardest and most wear-resistant materials for cutting tools.
Its development was significant for the **machining of non-ferrous materials such as aluminium with high silicon content, metal matrix composites (MMC) and carbon-fibre reinforced plastics (CFRP)**.

Quality

PDP410	
general applications	graphite and graphite composite
fine finishing	wood composite
<14% aluminium silicon alloy	raw ceramic
automotive industry	copper alloy





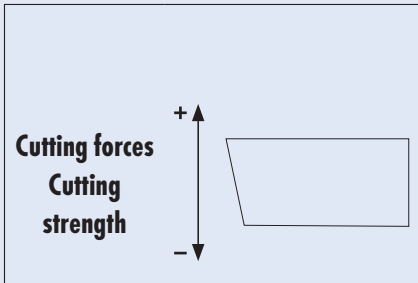
Geometry selection

Insert geometry and corner radius are crucial to service life and productivity in turning work.

The corner radius of the indexable cutting insert is an important performance parameter:

- A smaller corner radius must be selected for good chip breaking: 0.2 – 0.4 mm
- A large corner radius: 0.8 – 1.2 mm produces a greater surface quality and narrower chips, whereby the crater wear in hard turning is reduced.
- Machining with greater corner radius and smaller cutting depth results in lower entry and exit force.

In general, a greater corner radius ensures increased cutting stability and thus an increased service life. For this reason it is advisable to use the largest-possible corner radius according to the specific requirements.



Finishing and Semi-finishing	
Special surface and tolerance requirements apply in these cases.	
Roughing	
The following formula is recommended to calculate the minimum corner radius in relation to the feed for roughing:	
Insert shape	**Formula**
	Radius >1.6 x feed per rev.
	Radius >2.5 x feed per rev.

Selection of cutting edge preparation

Choosing the correct cutting edge preparation is the key criterion for the stability and service life of the cutting edge. It determines the degree of efficiency.

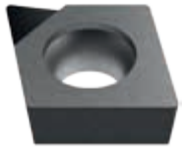
Cutting edge preparation

PKD: Cutting edge preparation F-type:

F-standard preparation without honing – Standard

- sharp cutting edge
- standard/cutting edge preparation for aluminium or other non-ferrous materials.

palbit PKD ISO indexable cutting inserts



1038

- **Polycrystalline diamond** (composite cutting material) with carbide base, good cutting edge sharpness and low cutting pressure with narrow tolerances. Lower wear resistance with increased toughness.

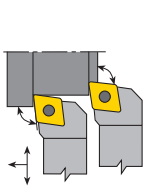
ATORN® DLOCK coolant supply and outlet

INFO

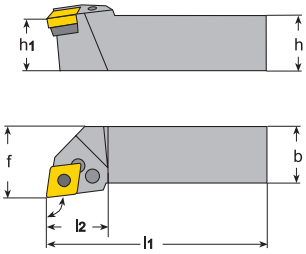
Coolant supply

The DLOCK system offers various coolant supply options. Not only are there two inlets on the underside of the holder (1x G1/8 inch and 1x M6 for transition to VDI holder), there is also another on the rear of the square (1x G1/8 inch). The coolant system can thus be connected with the greatest flexibility.

Coolant discharge



The coolant discharge is targeted at the primary cutting edge, thus guaranteeing optimum cooling without the risk of a thermal shock effect.



ATORN® Tool holders, negative PCLN

- **PCLN R/L 95°**

ATORN® SDUC HSS boring bars, positive

- **SDUC R/L 93°**
- Setting angle 93°, for positive 7° rhombic indexable inserts, 55° point angle
- **With internal cooling**
- **Use:** Longitudinal turning, very well suited to machining tight bores
- Low-vibration boring bars
- Indexable inserts with longer service life
- HSS boring bars with longer service life

ATORN® Miniature turning range with indexable cutting inserts, positive

- **Application:** for miniature turning from Ø 4.8 mm with CD.. - CP.. - WC.. - VC.. Indexable cutting inserts
- Wide range of boring bars in various materials: **steel, HSS, solid carbide**
- **ISO ultra-small indexable cutting inserts** of the latest generation

Miniature turning range with indexable cutting inserts

Boring bar, positive SCLD offset

- **SCLD R/L 95°**
- Setting angle 95°, for rhombic indexable inserts positive 7°, 80° point angle
- **Material:** Longitudinal turning

ATORN® Boring bar, positive SCLC

Figure shows right-hand boring bar, left-hand boring bar is mirror image

- **SCLC R/L 95°**
- Setting angle 95°, for positive 7° rhombic indexable inserts, 80° point angle
- Use: longitudinal turning, **very well suited to small bores**
- **With internal cooling, C04 and C05 without internal coolant supply**
- **D min from 5.00 mm**
- Note: right-hand boring bar = left-hand indexable insert, left-hand boring bar = right-hand indexable insert

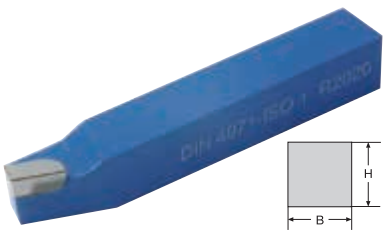
Turning tool

HM

- Shanks made from non-alloy steel (700 - 800 N/mm² in strength)
- Finely ground face and flank surfaces
- Fitted with ISO solid carbide cutting inserts according to DIN 4950
- **P20**
  P25/P30 multi-range quality
  K10/K20 multi-range quality
- Unit prices when purchased in PU
- Other qualities can be found in our webshop



Illustrations show RH version

Straight turning tool, right-hand, DIN 4971 - ISO 1

- Left-hand version available on request

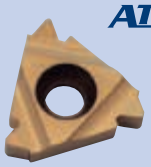
ATORN® Precision thread cutting

INFO

The threading inserts are clamped in the holder using Torx screws; you can use virtually all the tool holders available on the market.

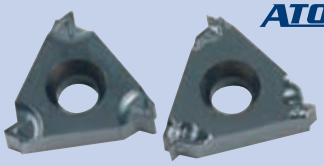
Affordable thread turning for external and internal threads, especially on CNC processing machines.



Ground version

ATORN®

Version ground on all sides with **highly accurate profile geometry**



- Guaranteed quality due to complete control
- Maximum precision possible
- Chip breakers ground from solid material

Ground version with sintered chip breaker

ATORN®

- Controlled chip breaking
- Longer service life

Threading inserts product range

	ATORN®
Partial profiles, 60°	●
Partial profiles, 55°	●
ISO metric thread	●
UN full profile thread (Unified)	●
BSW British Standard Whitworth thread	●
NPT American standard taper pipe thread	●
Trapezoidal thread according to DIN 103	●
Round thread according to DIN 405	●
PG (DIN 40430) armoured pipe thread	●
Saw-tooth thread (DIN 513)	●
Type Z inserts, 4.1 mm, for Sandvik holders	●
Mini thread	●

Other threading inserts are available on request:

- ACME American trapezoidal thread
- Oil thread
  - API – round
  - API – V 0.040
  - API – V 0.038 R
  - API – V 0.050
- BSPT British tapered pipe thread
- NPTF
- STUB ACME
- UNJ
- Multiple thread ridge inserts

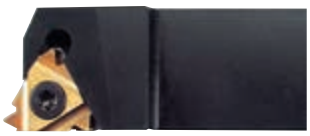
and thread based on drawings available on request

Multiple thread ridge inserts

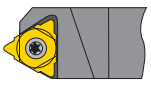
available on request

Recess turning inserts

ISO standard thread turning holder can also be used with recess turning inserts for grooving!



Application areas of the available carbide qualities



Quality	ISO	Application area
HC 5625 PVD TiN	P15-P35	For non-alloyed and alloyed steel at low to medium cutting speeds
HC 5615 PVD TiN	P10-P25 K10-K20	For machining non-alloyed, alloyed and stainless steels, super alloys, hardened steels, cast iron materials and non-ferrous metals at medium cutting speeds
HC 5630 PVD TiAlN	P20-P40 K20-K30	For machining non-alloyed, alloyed and stainless steels, super alloys, hardened steels and cast iron materials at medium to high cutting speeds
HC 5640 PVD TiN	P30-P50 K25-K40	For non-alloyed and alloyed steels at low cutting speeds, particularly suitable for stainless steels
HC 5620 PVD	M10-M20 K05-K20 N10-N20 S10-S20	For stainless steel, cast iron, titanium, non-ferrous metals and high-temperature alloys
HC 5110 PVD	H01-H20	For hardened steels, cast iron, super alloys up to 62 HRc

ATORN® Grooving inserts

Vc/fz 1040

- **For use on thread cutting holders**
- Low tool costs, since existing holders can be used
- One tool holder for grooving and thread cutting
- Three cutting edges, precision-ground
- HC 5640 coated
- **Supplied without spacer (spacer set), please order separately!**
- **Boring bars with insert size 16 without spacer cannot be used.**

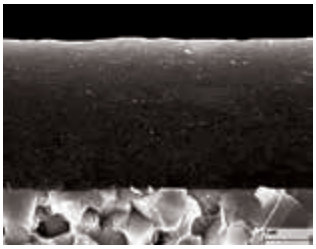
Model descriptions GROOVE

INFO

The new range captivates with 4 models for a wide range of uses and applications.

The **APU40G** is an extremely reliable all-rounder for general applications using steel, stainless steel and cast iron. The high edge stability of the substrate is optimally protected by the customised TiAlN-PVD coating. Protection from the temperature influences that inevitably occur during machining.



The tougher **APM45G** has the strongest substrate in the range and was specially developed for use with austenitic and stainless steels in unstable conditions. The PVD-TiATaN coating guarantees a high degree of machining reliability with excellent toughness even with materials that are difficult to machine, which is reflected in its process reliability.

The **ACP20G** rounds off the range, for maximum cutting speeds and excellent protection against diffusion wear. The TiCN-Al^2O^3-CVD coating protects this medium-tough variant from the excessive temperature influences that occur during recess turning in particular.

The uncoated **AWN16G** is a special substrate for machining non-ferrous materials and aluminium.

Overview of chip breakers *GROOVE*

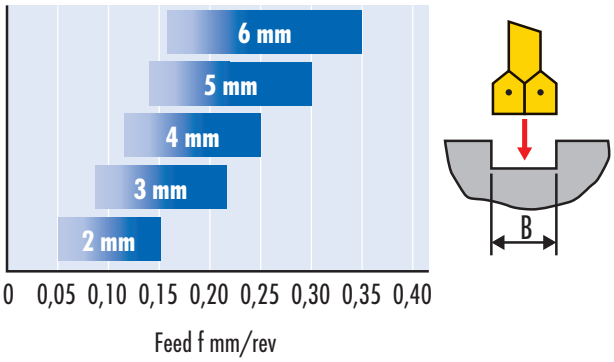
INFO

The new **AD** (ATORN Doppelt) chip breakers are designed with dual cutting edges and are suitable for a depth of 24 mm.
The name **AE** (ATORN Einfach) refers to a single cutting edge design and is suitable for punching depths of more than 24 mm.

The **chip breaker M** is suitable for universal use and for all materials. Thanks to the negative edge rounding, it is also suitable for use with high-alloy materials.

The **chip breaker F** was developed to guarantee very soft cutting. This is particularly important for thin-walled materials or pipes. Despite this positive cutting property, it has very strong edges and offers excellent chip control even at low feed rates. Another positive effect of this chip breaker is the low tendency towards built-up edges, which can offer significant advantages particularly for stainless steel materials.

In addition to the chip breaker F the **chip breaker ET** is a further alternative and a problem-solver in steel machining. Thanks to its high processes reliability, it is the first choice even for the toughest materials like titanium and duplex materials in conjunction with the SP45MG.
The **chip breaker TR** was developed for recess turning, grooving and parting-off. Optimum chip control is guaranteed, even with low infeed.

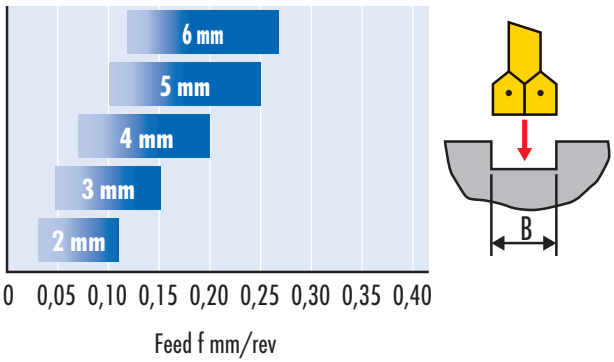


The rotating **chip breaker R** is designed for radius indexable cutting inserts and allows chip control with various materials and also stabilises cutting.

Completing the range is the **chip breaker LC**, which was developed for aluminium.

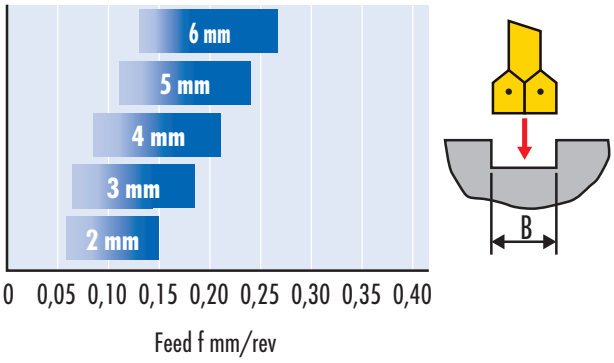
Chip breaker M-medium, universal

- Recessing insert with slightly negative edge rounding
- Also suitable for high-strength steel
- Suitable for almost all areas of application
- Main application area steel and cast iron

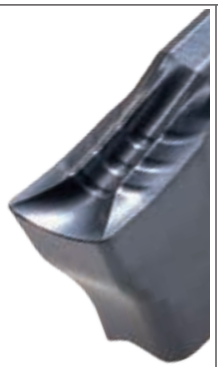


Chip breaker F-fine

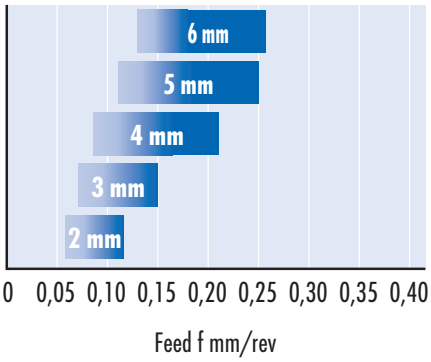
- Excellent, very soft cutting geometry with very low cutting forces
- For materials with low minimum tensile strength
- Ideal for thin-walled components
- High cutting edge stability with ideal chip control even at low feed rates
- Low tendency to form built-up edges

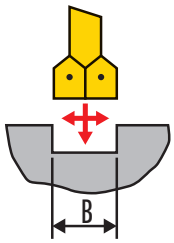


Chip breaker ET-extra



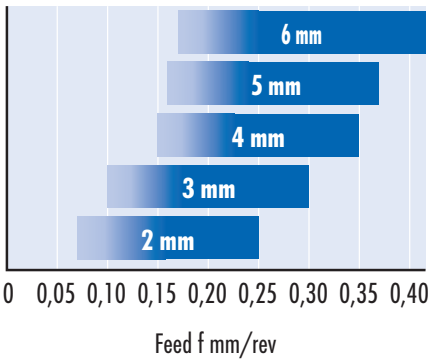
- Specially for stainless materials
- "Problem-solver" for materials that are difficult to machine such as titanium or duplex
- Extremely soft cutting

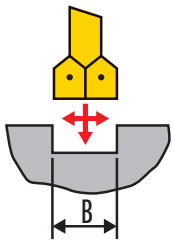




Chip breaker TR-turning

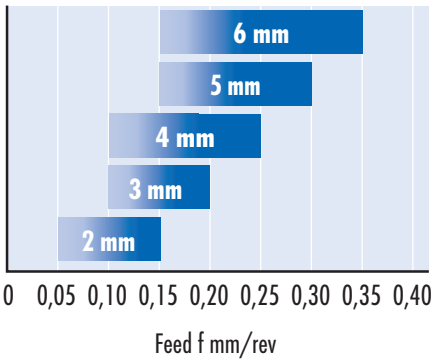
- Special chip breaker for parting-off and recess turning
- Outstanding chip control for longitudinal turning
- For all steel and stainless materials

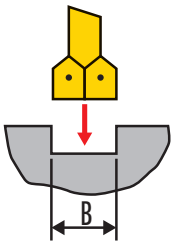




Chip breaker R-round

- Chip breaker for recess turning and ramping
- Rotating chip breaker for optimal chip control
- For all steel and stainless materials

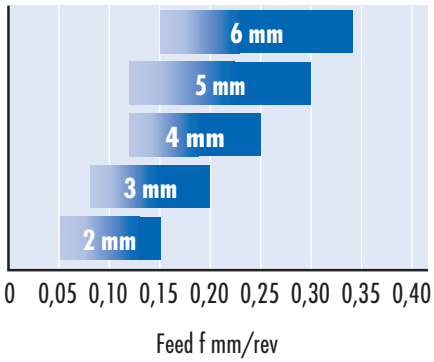


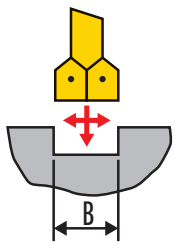


M, MU and MN chip breakers are used in the **ASS** (ATORN Single Small) system. These refer to medium chip breakers, universal medium chip breakers, and chip breakers for medium non-ferrous metals.

Chip breaker M-medium

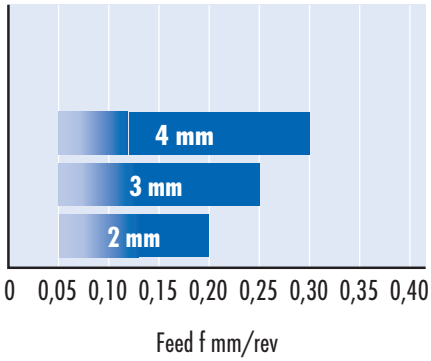
- Negative protective chamfer
- First choice for steel materials with high tensile strength
- Suitable for steel and grey cast iron
- Suitable for grooving and parting-off, as well as longitudinal turning

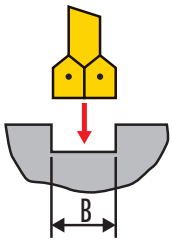




Chip breaker MU medium-universal

- Recessing and recess turning
- Outstanding chip control
- Suitable for steel and cast iron





Chip breaker MN, for aluminium machining

- Highly-positive chip breaker with sharp cutting edge finish
- Highly-polished chip breaker surface
- Maximum reduction of edge build-up

Chip breaker F - fine

- For grooving
- Excellent, very soft cutting geometry with very low cutting forces
- For materials with low minimum tensile strength
- Ideal for thin-walled components
- High cutting edge stability with ideal chip control even at low feed rates
- Low tendency to form built-up edges

ATORN® Recessing inserts AE right-hand GROOVE

- **The feed rates must be adjusted to the respective cutting edge width**
- Cutting edge accuracy W ± 0.02 mm
- AD = double-edged cutting insert **max. 24 mm punching depth**
- AE = single-edged cutting insert **punching depth can be extended up to 50 mm depending on blade overhang**
- Optional right 6°

Chip breaker M - medium, universal

- For grooving
- Recessing insert with slightly negative edge rounding
- Suitable for almost all areas of application
- Main application area steel and cast iron

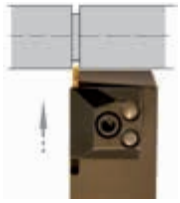
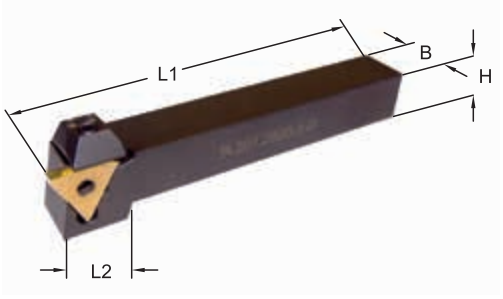
ATORN® DED grooving system

INFO

Recess turning tools with three-fluted indexable inserts





ATORN® DED

- 3-cutting-edge system
- Quick, positionally accurate changing of blades
- For punching depths up to 6 mm depth and 8 mm width
- For grooving and parting-off, for grooves in accordance with DIN 471/472, for axial grooves
- More cost-effective with 3 cutting edges
- Soft cutting with modern coatings and ground chip breakers

ATORN® DED grooving system holder

- **For three-edged recessing inserts**
- Solid tool holder made from 42 CrMo4V, approx. 1,300 N/mm² Hardened and tempered
- Powerful clamping element guided by two cylindrical pins

Holder type R/L..1-D

- Punching depth up to 4 mm
- **Tmax. reduced for workpiece Ø > 40 mm**

Designation	H ± 0.1 mm	B ± 0.1 mm	L1 mm	L2 mm	T max. mm	suitable cutting inserts					Right-hand art.no.	€	Left-hand art.no.	€

ATORN® DED grooving system inserts

1046

- **3 cutting edges**
- Sintered version with incircle Ø 13.2 mm
- Positive, ground cutting geometries
- Extremely easy cutting action
- Low cutting forces
- Parting-off insert with chip breaker
- High thermal and chemical stability
- Low friction coefficient
- Can be used under some circumstances for dry machining
- Can be used universally with almost all materials
- Versions for parting-off, grooving, radius recessing, copy turning and precision turning
- **Material: HC 8620 ISO PMKNS fine grain carbide, TiAlN-coated**

For retaining grooves in accordance with DIN 471 / 472

ISO P M K N

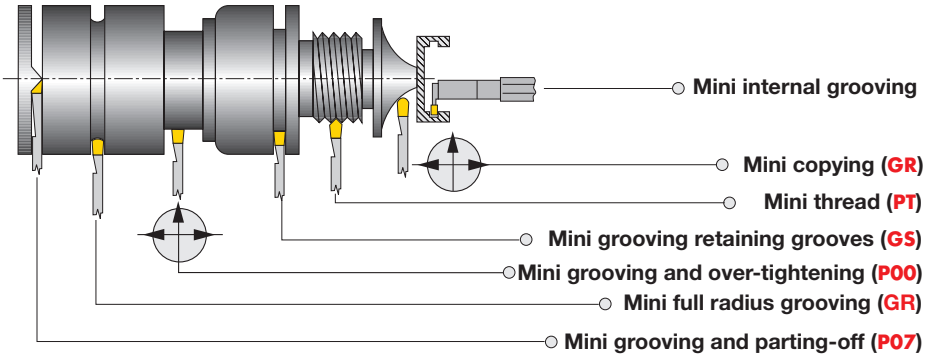
palbit Grooving and parting-off system MINI

- Two cutting edges on each indexable cutting insert for extremely small-scale grooving and parting-off tasks
- Practically the entire spectrum of operations involved in grooving and parting-off work up to 2.0 mm is covered with a minimum of equipment.
- The design of the insert seat in the holder, clamped in place by means of a TORX screw, ensures a high level of repeatability and positioning precision of the cutting edge, and enables all of the indexable cutting inserts listed below to be used.



Grooving and parting-off up to 2 mm

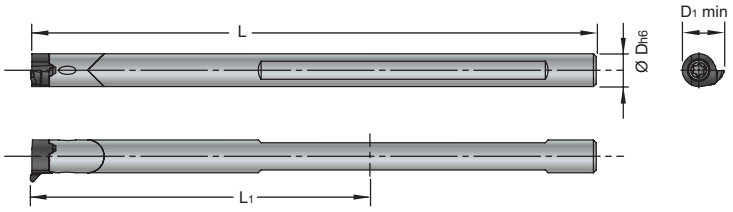
Three-ribbed toothing

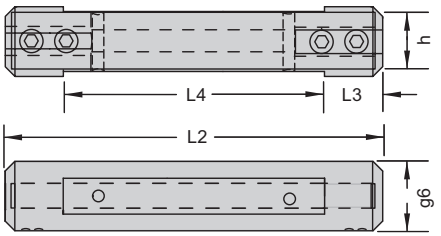
ATORN® MINI-CUT

The exchangeable carbide blades are screwed onto the front using the tried and tested three-ribbed toothing.



- Best repetition precision with easiest handling
- Best possible absorption of torque forces
- Very precise fixing of position of the blade at the centre of rotation

ATORN® Tool holder MINI-CUT



- **With internal cooling**
- For recess turning, internal turning and thread cutting (internal) from Ø 7.8 mm
- Spare clamping screws available on request
- **FLEXO** clamp mounting, variable clamping range from ... to ... mm (see table Clamping Length = „**L**"
- **FLEXO** clamp mounting for HM cutting inserts R/LS 08 and R/LS 11
- Suitable **FLEXO** steel clamp mounting

Dümmel WERKZEUGFABRIK Carbide metal internal turning tools *mini-børe*

INFO

from a diameter of 0.6 mm,
with internal coolant supply

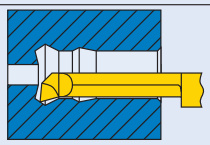
Hollow turning, internal plunge turning, internal turning and chamfering, roughing and internal chamfering for subsequent parting as well as internal threading for small bore diameters continually pose new problems for production – problems that can often be solved only with special tools.

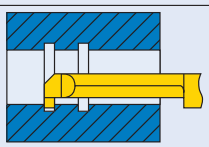
mini-børe has been developed specifically to solve these problems and offers optimum conditions for cost-effective bore machining with diameters starting from 0.6 mm. The favourable cost-breakdown of the cutting inserts means that custom productions are no longer worthwhile.

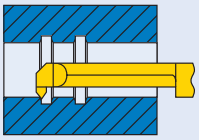
The cutting inserts, available in right-hand and left-hand designs, are supported by a tool holder that can be used for both designs. The tool holder and cutting inserts are fitted with an internal coolant supply.

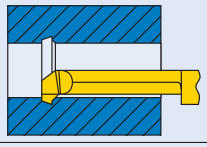
Cutting material

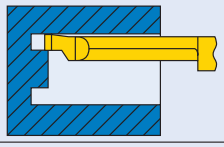
K10F uncoated, all-purpose fine-grain carbide metal, suitable for application at low and medium cutting speeds and for machining non-ferrous metals

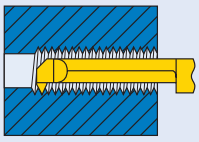


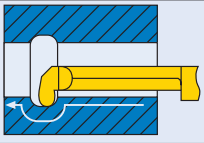






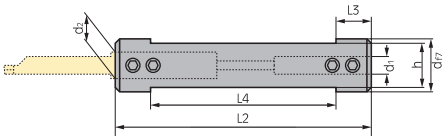






CN45F TiN coated
All-rounder, for medium to high cutting speeds, with restrictions for non-ferrous metals

AL41F TiAlN coated
High temperature resistance at high hardness levels, also very well suited to non-ferrous metals



Special designs
If you have internal machining problems that cannot be handled with the cutting insert sizes listed here, we will be pleased to present you with possible solutions.

from Ø 0,6 mm

	**Hollow turning** from diameters of 0.6 mm / up to 7 x D 
	**Internal plunge turning** from diameters of 4 mm / up to 7 x D
	**Hollow turning and chamfering** from diameters of 5 mm
	**Internal roughing and chamfering** for subsequent parting-off from diameters of 5 mm
	**Axial groove turning** from external groove diameters of 15 mm
	**Internal threading** from diameters of 4 mm
	**Internal plunge turning** from diameters of 4 mm, full radius (on request)

Dümmel WERKZEUGFABRIK Tool holder mini-børe

- **With internal coolant supply**
- For holding right-hand and left-hand cutting inserts
- Two different holder Ø measurements (d1 and d2)
- Central coolant supply through the tool holder
- Axial position of the cutting inserts in the tool holder can be precisely reproduced via a built-in depth stop
- Radial position of the cutting edge is guaranteed by tension applied to the lateral clamping surface of the cutting inserts by the clamping screws
- Size 0316 and 0320 for 304450.... and 304455.... and high-pressure applications with central cooling hole

Dümmel WERKZEUGFABRIK Cutting inserts mini-børe hardline

1048

For hard materials

- **Bore machining from Ø 2 mm**
- **Internal turning and copying**
- Straight shank and lateral clamping surface
- Right-hand and left-hand versions (other left-hand versions available on request)
- **Material: X2CA superfine grain carbide TiAlN+C**
- **Can be used up to HRc 66**
- **best service life results only when coolant emulsions are used**
- **Advantages over CBN:**
- No problems in machining thin-walled parts
- Few temperature changes inside the workpiece
- Can also be used in HRc 48 - 53 range without difficulty
- Feed 100 % reproducible for the workpiece
- Considerable reduction in tooling and adjustment costs

Internal turning

- From 2 mm bore diameter

Dümmel WERKZEUGFABRIK Clamp mounting DT-Line

- **Multi-function tool for drilling and turning**
- Clamp mounting with 4 clamping surfaces, 90° offset
- internal coolant supply
- drilling depths up to 4 x D
- bore machining from Dmin. 2.9mm
- cutting edge with internal coolant bore
- AL41F high-performance coating
- large clamping depths possible when turning and solid drilling

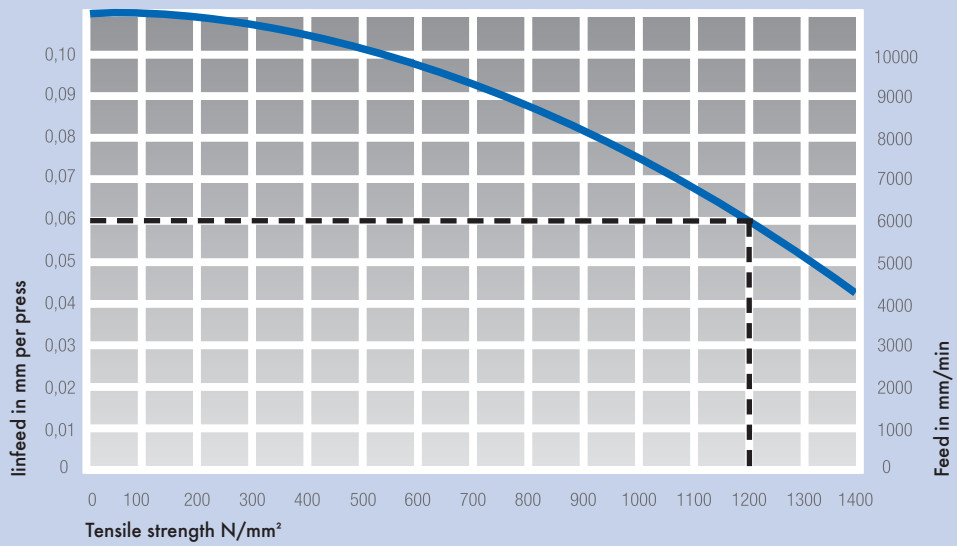
ATORN® Systematic keyway slotting

INFO

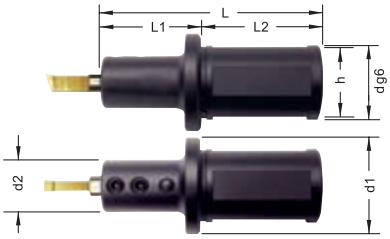
The tool system for keyway slotting offers a cost-effective and simple solution in many areas and can be used on practically any CNC lathe, milling machine or machining centre.
Practically any common groove can be created directly on the lathe. The machining of complex and therefore often valuable workpieces or semi-finished products on a lathe is frequently one of the first work processes. The workpiece is either pre-turned or finished.
Grooves must now be applied longitudinally as a carrier or anti-twist protection.
This tool system can now be used to manufacture longitudinal grooves compliant with DIN 138 and DIN 6885 on CNC lathes and reduce costs.



References

- an undercut is necessary at the end of the broached groove for tool run out.
- the insert should not touch the bottom of the groove as the tool retracts.
- setting of the tool is very important. Check accurate the component diameter before taking the first pass.
- using oil or emulsion helps to achieve better surface finish and flush chips out of the component.
- the tool should be set at the 12 o´ clock position to ensure that chips fall away from the groove.
- avoid interrupted cutting

Approximate value for broaching
Example: heat-treated steel for intance 42CroMo4 with1200 N/mm²
- infeed per pass 0,05-0,06 mm
- feed 5500 mm/min



ATORN® Tool holder for keyway slotting

- Keyway slotting on CNC lathes, milling machines and machining centres
- Keyway slotting of longitudinal grooves in accordance with DIN 138 and DIN 6885

ATORN® Keyway slotting sets for longitudinal grooves

- Keyway slotting on CNC lathes, milling machines and machining centres
- Keyway slotting of longitudinal grooves in accordance with DIN 6885
- **Cutting inserts loose fit in accordance with DIN 6885**
- Tolerance class JS9
- Cutting material: AL41F, TiAlN-coated

Economical keyway slotting even in very small production runs!

NPU 5-piece keyway slotting set, bore Ø from 6 mm

Contents	art.no.	€
1x clamp mounting NHU.0025.1 - 3x cutting edge inserts: NPU.0200.01.1 - NPU.0300.01.1 - NPU.0400.01.1 1x hex key - for groove widths 2 / 3 / 4 mm	**307010** 0001	225,–

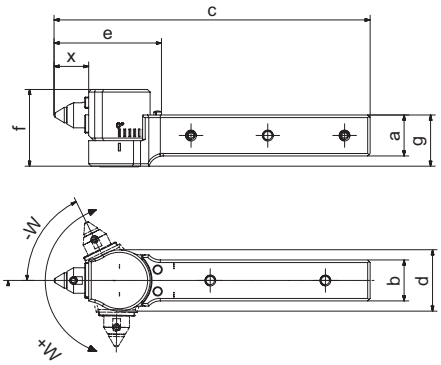
Smoothing tool SET 510 / 520

- The Zeus smoothing tool is an all-rounder in all conventional surface-smoothing operations.
- Whether on straight, conical or concave surfaces
- Planar sides can also be machined.
- Not suitable for interrupted cutting.

Smoothing tool holder SET 510

- **Properties**
  - Fixed tool head
  - **Supplied without smoothing tips**
  - Can be adjusted up to +/- 10° thanks to integrated setting option in the shank
  - For smoothing cylindrical shafts
- **Recommendation**
  - Polishing speed up to 200 m/min
  - Feed up to 0.2 mm/rev
  - Workpiece allowance of 0.01 mm (~RZ 10) and 0.02 mm (~RZ 20)
  - Cooling lubricant is recommended
- Tool holder SET 510-10U including 12x12 mm and 16x16 mm shank adapter
- Tool holder SET 510-16U including 20x20 mm and 25x25 mm shank adapter



Designation	Contents	a mm	b mm	c mm	d mm	e mm	f mm	x mm	art.no.	€

3161

Smoothing tool holder SET 520

- **Properties**
  - Variably adjustable tool head
  - **Supplied without smoothing tips**
  - Tool for universal applications
  - Swivel range +/- 90°
  - Use up to the collar
  - The adjusting options of the tool head allow the smoothing of planar surfaces, as well as conical, convex and concave geometries.
- **Recommendation**
  - Polishing speed up to 200 m/min
  - Feed up to 0.2 mm/rev
  - Workpiece allowance of 0.01 mm (~RZ 10) and 0.02 mm (~RZ 20)
  - Cooling lubricant is recommended
- Tool holder SET 520-10U including 12x12 mm and 16x16 mm shank adapter
- Tool holder SET 520-16U including 20x20 mm and 25x25 mm shank adapter

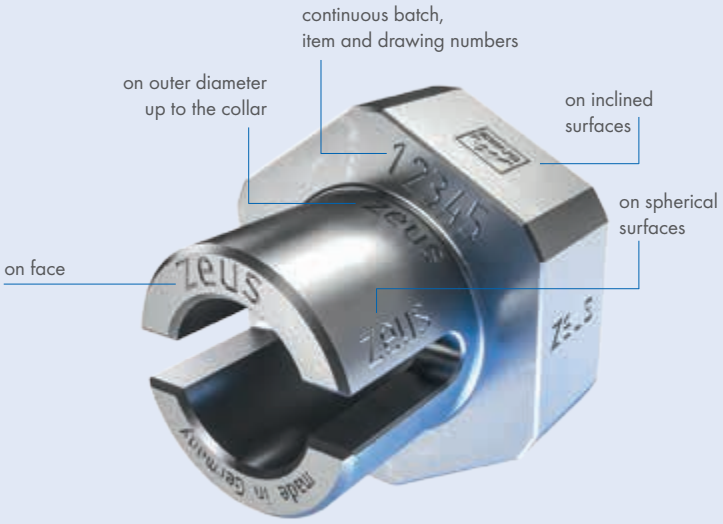
Perfect labelling for every application

Full flexibility
Labelling can be applied everywhere, right up to the collar and on any given workpiece diameter. Ideal for several series with various workpieces and/or changing inscriptions.



Efficiency for all series sizes
zeus labelling technology is equally suitable for all batch sizes and guarantees efficiency in all applications.

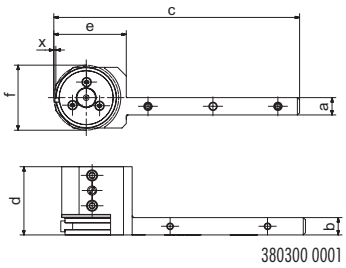
Precise in every position

Where can the workpieces be labelled?

The example shows that you can inscribe practically everywhere. Whether on spherical surfaces, on the collar, on inclined surfaces or on the face - zeus labelling technology meets your requirements.

The right labelling system

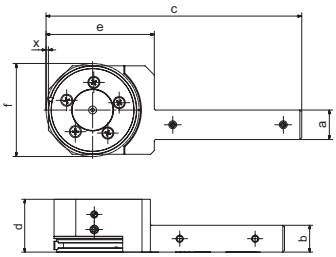
We would be happy to determined the right labelling system for your application. Send us your enquiry with your specifications. Don't hesitate to contact us in person.
We offer comprehensive advice and find the optimum solution for you!



Labelling tool 432

- The Zeus lettering system is versatile, as it is not governed by the workpiece diameter.
- Interchangeable segments allow flexible, fast and low-cost adjustment of the text for various applications.
- For materials up to a tensile strength of 1000 N/mm.
- Available only on request for materials with a greater tensile strength.
- Embossing depth of 0.15 mm in diameter.

380300 0001



380300 0001

Labelling set 432

- **Sets supplied in high-quality plastic case, without letters, numbers and special characters**
- **Lettering set 4312-08**
  - 1 x basic shank (full shank version) tool 432-08
  - 1 x shank adapter 10x10 mm, 12x12 mm and 16x16 mm
  - 1 x start and end segment
- **Lettering set 4312-16**
  - 1 x basic shank (full shank version) tool 432-16R
  - 1 x shank adapter 20x20 mm and 25x25 mm
  - 1 x start and end segment

Lettering segment set for 432-08 R/L

- **Properties**
  - Lettering segment independent of tool diameter
  - Segments are individually exchangeable
  - Full depth and sharpness of the script is achieved through an embossing process.
- **Application**
  - Exact positioning of the lettering on the workpiece circumference
  - Point height corresponds to the first embossed dot
  - Individually configurable embossing position
  - Lettering right up to the collar is possible
  - Change the reading direction by rotating the T-shaped segments
- **Individual letters and numbers are available on request.**

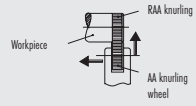
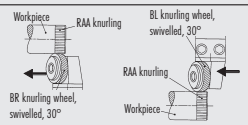
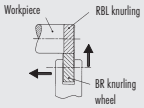
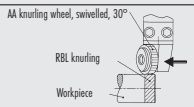
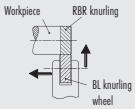
Selection of knurling tools

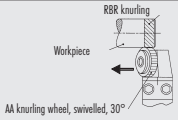


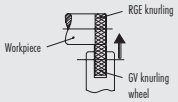


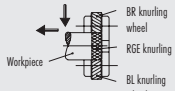


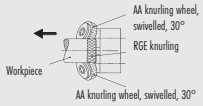


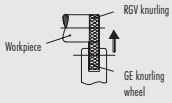


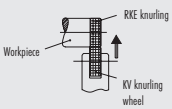


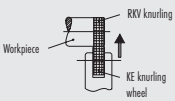












EXAMPLE:

EXPLANATION OF THE ARROWS:

- Knurl can only be produced in a radial direction (grooving knurling)
- Knurl can only be produced in an axial direction (longitudinal knurling)
- Knurl can be produced in an axial and a radial direction

Knurl profile (DIN 82)	Production process	
	Form knurling	Knurl cutting
RAA knurl with axially parallel score marks		
RBL left knurl		
RBR right knurl		
RGE left / right knurl, tips increased, 30°		
		
		
RGV left / right knurl, tips deepened, 30°		
RKE cross knurl, tips increased, 90°		
RKV cross knurl, tips deepened, 90°		

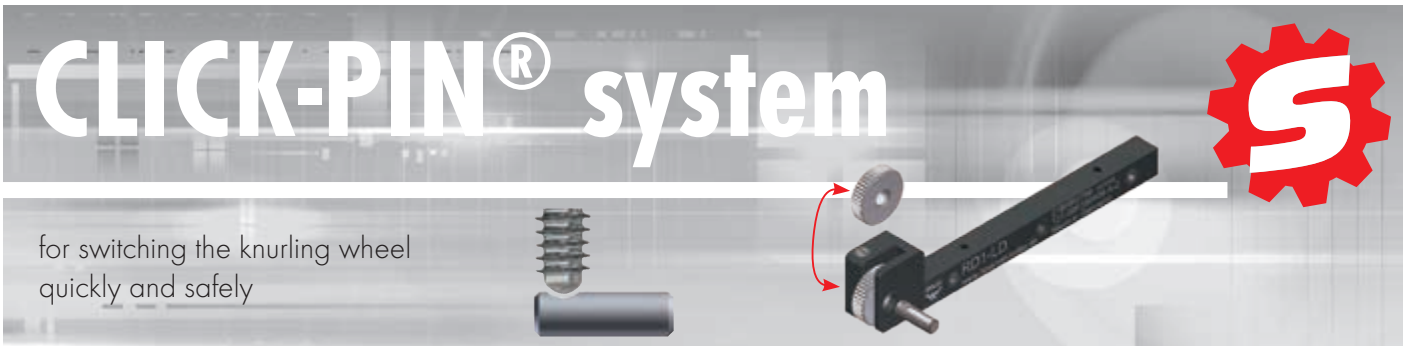
ECO knurling tool for 1 knurling wheel

- Use: Form knurling (chipless forming), all types of knurl pattern, lettering and profiles
- Knurling wheels: all knurl forms can be used
- Machine type: conventional and automated lathes, centre height must be set
- Supplied without knurling wheel

Description	Shank width mm	Shank height mm	Length mm	Working area mm	for knurling wheel mm	Type	**Holder without wheel** art.no.	€
Straight version	8	8	99	3-20	15 x 4 x 4	130	**380101** 1508	23,40
Straight version	16	16	130.5	15 - 200	20 x 8 x 6	130	380101 0001	22,70

3126

Knurling tool for 1 knurling wheel



- Application: Knurl forms (chipless forming), all types of knurling patterns, profiles and lettering
- Thumb wheels: all knurl forms can be used
- Machine type: Lathes and automatic lathes (conventional and CNC), point height integrated in the tool holder
- Special surface hardening for increased wear resistance
- Carbide runner pins for higher rotational speeds, faster machining, longer endurance
- **CLICK PIN system**
- Supplied without knurling wheel

Description	Shank width mm	Shank height mm	Length mm	Working area mm	for knurling wheel mm	Type	**Holder without wheel** art.no.	€

Knurling tool for 2 knurling wheels

- Use: Form knurling (chipless forming), workpiece knurl profile in accordance with DIN 82: RAA, RGE 30°
- Knurling wheels: **RAA** = 2x type AA; **RGE 30°** = 1x BL 30°, 1x BR 30°
- Machine type: Lathes and automated lathes (conventional and CNC), centre height integrated in the tool holder
- Modular design, knurling tool can be used universally as a right-hand and left-hand version, retooling simply involves turning the knurling head
- Special surface hardening for increased wear resistance
- Carbide runner pins for higher speeds, faster machining, longer service life
- With flexible centring
- Clearance angle correction by means of grub screws in the shank
- Supplied without knurling wheels

Description	Shank width mm	Shank height mm	Length mm	Working area mm	for knurling wheel mm	Type	Holder w/o wheels art.no.	€
Straight version	16	16	119	6 - 60	15 x 4 x 4	141	**380103** 1516	215,–

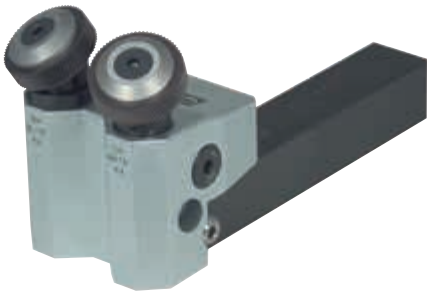
Straight version	20	25	130	10 - 110	20 x 8 x 6	141	380103 2025	276,50
							3126	

Knurl cutting tool for 1 knurling wheel, 25 x 6 x 8 mm

- Use: Knurl cutting, workpiece knurl profile according to DIN 82: RAA
- Knurling wheels: RAA = 1 x BR 30° for right-hand use, RAA = 1 x BL 30° for left-hand use
- Machine type: conventional and CNC automated lathes, centre height integrated in the tool
- Modular design, tool can be used universally as a right-hand or left-hand version
- Quick retooling by simply removing and turning the knurling head, precise axis position after every reassembly thanks to 3-point support
- With position indicator for optimum initial positioning
- Fine adjustment of the knurling head via threaded spindle with scale
- Precise control for axially parallel knurling thanks to adjustable knurling head
- Clearance angle set using grub screws in the shank
- Special surface hardening for increased wear resistance
- Supplied without knurling wheel



Design	Shank width mm	Shank height mm	Total length mm	Working area mm	for knurling wheel mm	Type	Holder without wheel art.no.	€
Universal R/L	12	12	103.5	3 - 50	15 x 4 x 8	231	**380150** 1212	464,20

Knurl cutting tool for 2 knurling wheels

- Use: Knurl cutting, workpiece knurl profile according to DIN 82: RGE30°, RGE45°
- Knurling wheels: RGE30° = 2x type AA, RGE45° = 1x BL 15° and 1x BR 15°
- Machine type: Lathes and automated lathes, conventional and/or CNC
- Modular design: Tool can be used universally as a right-hand or left-hand version
- Fast retooling by simply removing and turning the knurling head,
- Flexible application: vertical height adjustment for use on shank sizes 20 and 25 mm
- Easy to set: setting scale and setting spindle for quickly adjusting the manufacturing diameter
- Fine adjustment of the centre height by means of cutter spindle height adjustment
- Stable construction: toothing between the tool holder and the cutter head
- Special surface hardening for increased wear resistance
- Vertical height adjustment for use on shank sizes 20 and 25 mm
- Supplied without knurling wheel

INFO

ISO P

In the ISO-P range, general structural steel and unalloyed steel have up to 110 HB (Brinell hardness) and a carbon content of up to 0.55%. There is also low-alloy steel up to 180 HB and high-alloy steel from 200 HB – 400 HB and materials with a hardness of up to max. 48 HRc (Rockwell hardness).
The new turning grades with multilayer CVD layers are particularly suitable for cutting ISO-P materials.

ISO M

Indexable cutting inserts in the ISO-M area are mainly used in machining ferritic and martensitic stainless steel and austenitic stainless, usually acid-resistant steel (Ni content of over 20%). So-called duplex steel has a two-phase structure and consists of ferrite and austenite. Higher-alloyed duplex materials are also called super-duplex or hyper-duplex.

ISO S

Indexable cutting inserts for the ISO-S range are mainly used in machining highly heat-resistant alloys based on nickel-iron and cobalt. Titanium in its pure form or in alpha and beta alloys complete this ISO-S area. These materials which are extremely difficult to machine require a machining strategy adapted to the component which also depends on the machine.

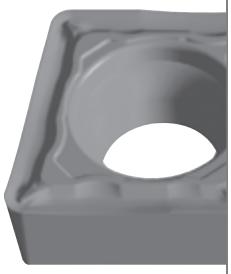
ATORN® Overview of positive chip breakers

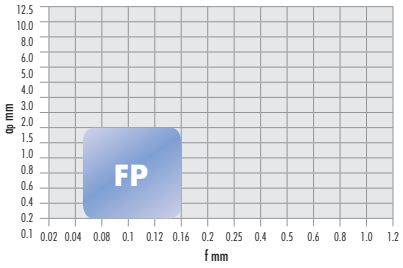
INFO

The new chip breakers from the range for positive indexable cutting inserts (5° and 7°)

The newly calculated chip breakers for individual use have been adapted to users' needs. The guarantee of optimised chip breaking properties in daily use was the priority here.



Adapted cutting edge preparation and enhanced surface treatment make the geometries even more efficient and more soft cutting. This is evident both in daily use and in series production as a result of an extended service life and lower machine loads. The latest insights in the development and modern cutting strategies of the individual ISO classes P, M, K, S and N were applied in the development of the chip breaker.



The benefits to the customer in terms of effectiveness, process reliability and material removal rate are the result. Elegant solutions are available for fine and ultra-fine finishing, medium machining and light roughing for positive geometries.
The new TURN provides the best possible chip control even with small cutting depths and feeds, very good chip breaking properties even with exotic materials with a significantly reduced tendency to form burrs, and the best possible surface qualities.

Chip breaker FP

ap	f
0.1 – 1.5 mm	0.05 – 0.16 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

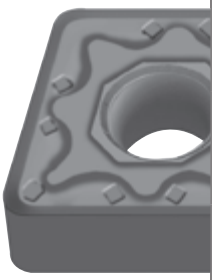
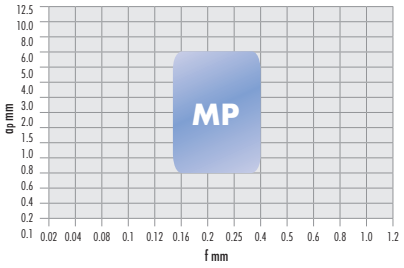
Chip breaker SP

ap	f
0.3 – 2.0 mm	0.08 – 0.25 mm/rev

- Long service life
- Soft chipping
- Universal application



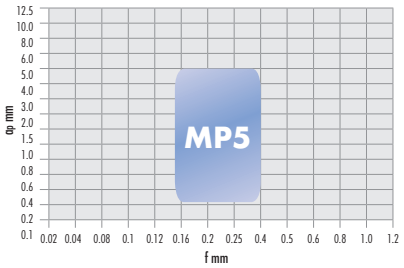


ISO P chip breaker, negative		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker MP

ap	f
0.6 – 6.0 mm	0.15-0.4 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

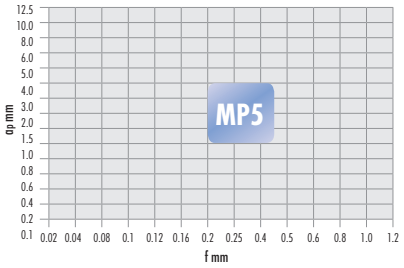


ISO P chip breaker, negative		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker MP5

ap	f
0.25-5 mm	0.15-0.4 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

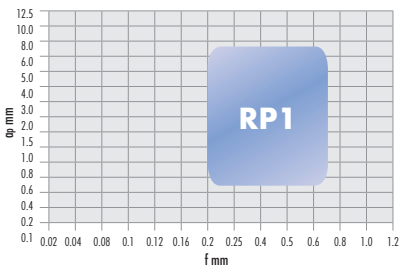


ISO P chip breaker, negative		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker MP5-HP

ap	f
1.0 – 4.0 mm	0.2 – 0.45 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

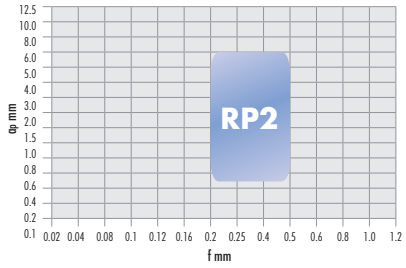


ISO P chip breaker, negative		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker RP1

ap	f
0.5 – 7.5 mm	0.2 - 0.7 mm/rev

- Optimised chip breaker prevents crack formation and is temperature-resistant
- Improved cutting edge stability, prevents notching effect and notch impact

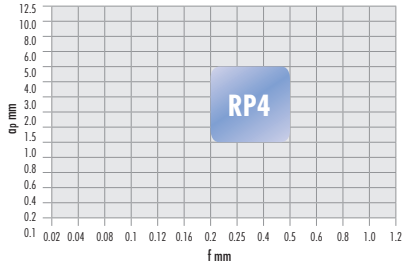


ISO P chip breaker, negative		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker RP2

ap	f
0.5 – 6 mm	0.2 - 0.5 mm/rev

- Optimised chip breaker prevents crack formation and is temperature-resistant
- Improved cutting edge stability, prevents notching effect and notch impact
- Stabilised contact surfaces

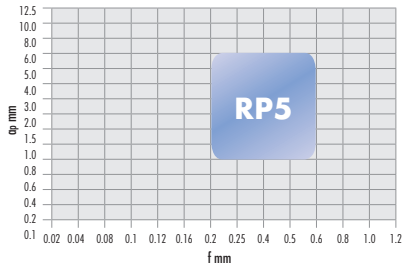


ISO P chip breaker, negative		
		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	○

Chip breaker RP4

ap	f
1.0 – 5.0 mm	0.2 – 0.5 mm/rev

- Optimised chip breaker prevents crack formation and is temperature-resistant
- Improved cutting edge stability, prevents notching effect and notch impact

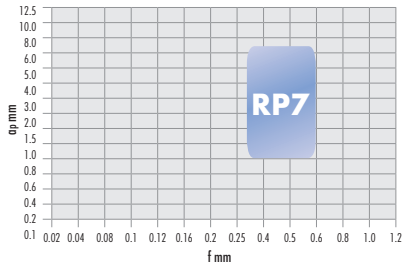


ISO P chip breaker, negative		
		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker RP5

ap	f
0.8 – 6.0 mm	0.2 – 0.6 mm/rev

- for medium to coarse machining
- Chip breaker for difficult cuts
- For universal applications

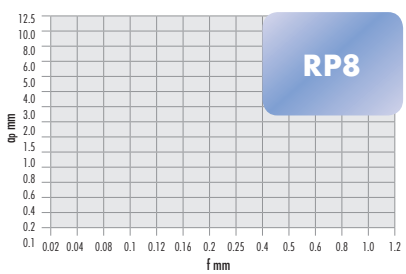


ISO P chip breaker, negative		
		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RP7

ap	f
0.8 – 7.0 mm	0.3 - 0.6 mm/rev

- One-sided chip breaker
- Maximum machining reliability
- Chip breaker for difficult cuts
- Increased cutting force, temperature and vibration tendency

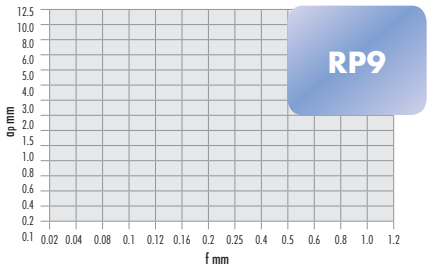


ISO P chip breaker, negative		
		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RP8

ap	f
2.5 – 13 mm	0.4 – 1.3 mm/rev

- One-sided chip breaker
- Maximum machining reliability
- Chip breaker for difficult cuts
- Increased cutting force, temperature and vibration tendency



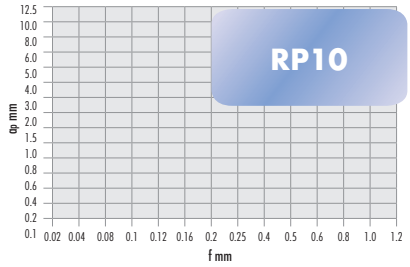
ISO P chip breaker, negative		
		
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RP9

ap	f
2.0 – 13 mm	0.5 – 1.5 mm/rev

- One-sided chip breaker
- Maximum machining reliability
- Chip breaker for difficult cuts
- Increased cutting force, temperature and vibration tendency

ISO P chip breaker, negative



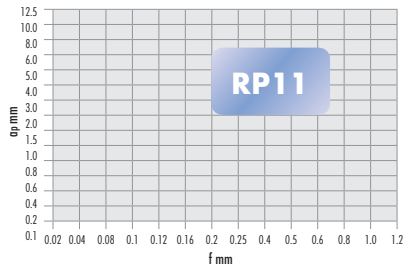
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RP10

ap	f
2.5 – 12 mm	0.2 – 1.3 mm/rev

- One-sided chip breaker
- Maximum machining reliability
- Chip breaker for difficult cuts
- Reduced cutting force, temperature and vibration tendency

ISO P chip breaker, negative



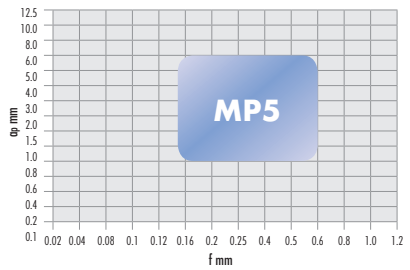
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RP11

ap	f
2.0 – 7.0 mm	0.2 - 0.7 mm/rev

- One-sided chip breaker
- Maximum machining reliability
- Increased cutting force, temperature and vibration tendency

ISO P chip breaker, negative



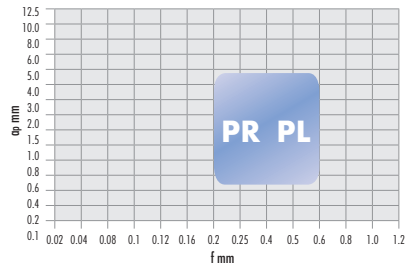
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker MP5

ap	f
0.8 – 6 mm	0.15 – 0.6 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

ISO P chip breaker, negative

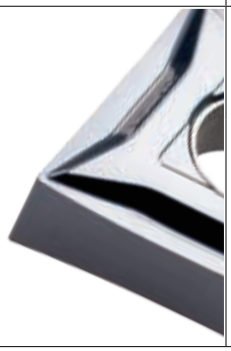


Continuous cut	Slightly interrupted cut	Significantly interrupted cut
○	●	●

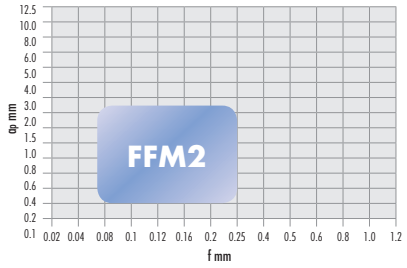
Chip breaker PR and PL

ap	f
0.5 – 4.8 mm	0.2 – 0.6 mm/rev

- Soft chipping
- "Sharp" cutting edge
- Universal application
- Established chip level



ISO P chip breaker, negative
ISO M chip breaker, negative



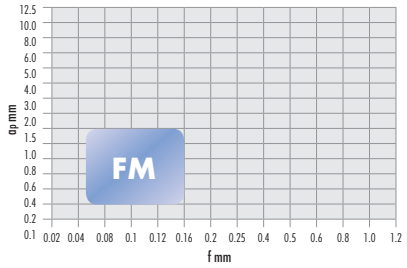
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	–

Chip breaker FFM2

ap	f
0.2 - 2.5 mm	0.07 - 0.25 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- For best surface qualities

ISO M chip breaker, negative



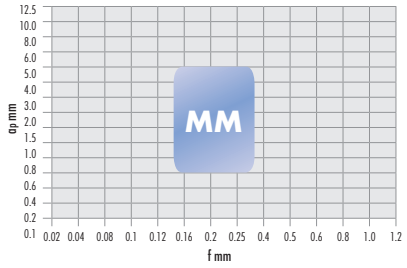
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	–	–

Chip breaker FM

ap	f
0.3 - 9.0 mm	0.1 - 0.6 mm/rev

- Long service life
- For best surface quality

ISO M chip breaker, negative



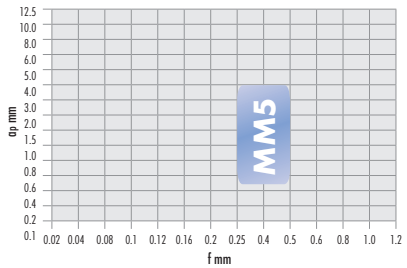
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker MM

ap	f
0.6 - 5.0 mm	0.15 - 0.35 mm/rev

- Long service life
- Low cutting forces

ISO M chip breaker, negative



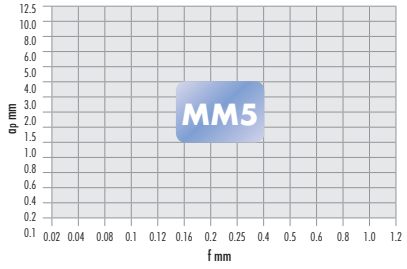
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker MM5

ap	f
0.5 - 4.0 mm	0.25 - 0.5 mm/rev

- Specially developed for low cutting forces
- Optimised chip breaker to prevent burr formation
- For best surface qualities

ISO M chip breaker, negative



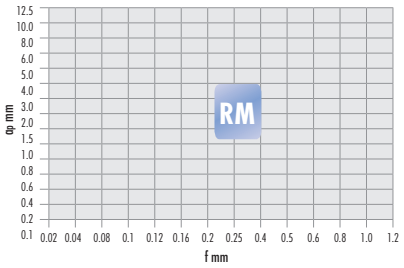
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	–

Chip breaker MM5-HP

ap	f
1.0 - 4.0 mm	0.15-0.4 mm/rev

- Specially developed for low cutting forces
- Optimised chip breaker to prevent burr formation
- For best surface qualities

ISO M chip breaker, negative



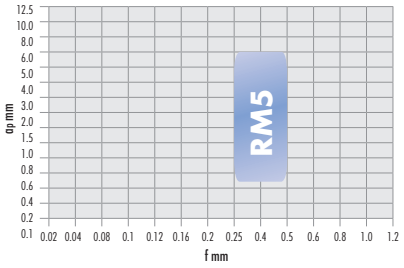
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker RM

ap	f
1.2 - 4.0 mm	0.22 - 0.4 mm/rev

- for medium to coarse machining
- Chip breaker for difficult cuts

ISO M chip breaker, negative



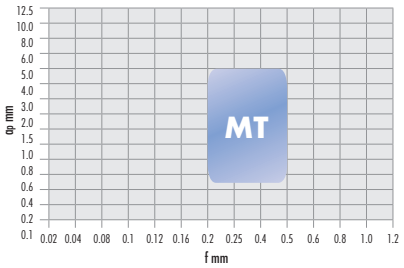
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RM5

ap	f
0.5 - 6.0 mm	0.25 - 0.5 mm/rev

- Specially developed for low cutting forces
- Optimised chip breaker to prevent burr formation
- For best surface qualities
- For light to medium roughing

ISO M chip breaker, negative



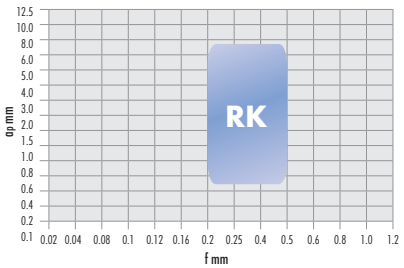
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	–

Chip breaker MK

ap	f
0.5 - 5.0 mm	0.2 - 0.5 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Universal application

ISO K chip breaker, negative



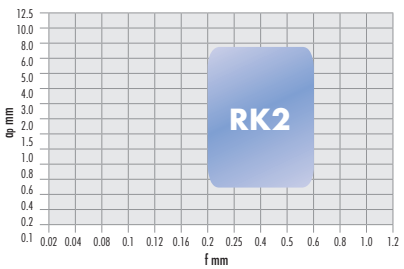
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker RK

ap	f
0.5 - 7.5 mm	0.2 - 0.5 mm/rev

- Prevents crack formation and is temperature-resistant
- Universal application

ISO K chip breaker, negative



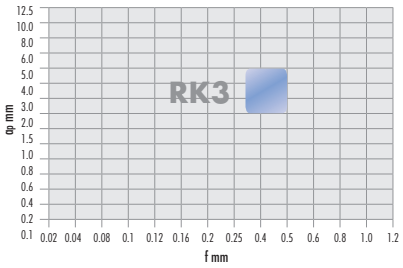
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	●

Chip breaker RK2

ap	f
0.5 - 7.5 mm	0.2 - 0.6 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Light to medium roughing work

ISO K chip breaker, negative



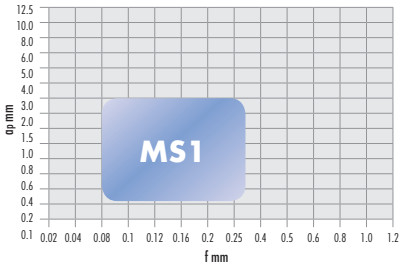
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

Chip breaker RK3

ap	f
2.0 – 5.0 mm	0.3 – 0.5 mm/rev

- Long service life
- Optimised chip breaker prevents crack formation and is temperature-resistant
- Light to medium roughing work

ISO K chip breaker, negative



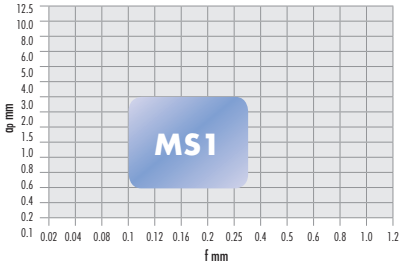
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	–

Chip breaker MS1

ap	f
0.25 – 3.0 mm	0.08 – 0.3 mm/rev

- Especially for chrome-nickel steel
- Soft chipping
- "Sharp" cutting edge

ISO S chip breaker, negative



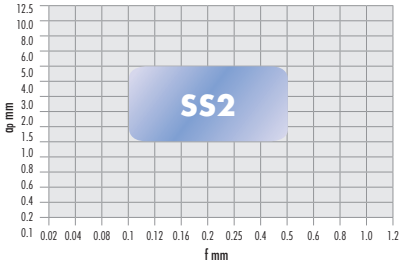
Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	–	–

Chip breaker MS1-HP

ap	f
0.4 – 3.0 mm	0.1 – 0.3 mm/rev

- Especially for chrome-nickel steel
- Soft chipping
- Sharp cutting edge

ISO S chip breaker, negative



Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	○	–

Chip breaker SS2

ap	f
1.0– 5.0 mm	0.1 - 0.5 mm/rev

- Especially for chrome-nickel steel
- Soft chipping
- "Sharp" cutting edge
- for medium to coarse machining

ISO S chip breaker, negative

Continuous cut	Slightly interrupted cut	Significantly interrupted cut
●	●	○

ATORN® Technical information ISO indexable cutting inserts

Choice of carbide quality

ISO	Carbide quality	ISO range	Material	Recommended application area
P	HC7610	P01-P20 K15-K25	Steel, grey cast iron and spheroidal graphite iron	Ultra wear-resistant type for small to medium chip cross sections, high cutting speeds under good conditions
P	HC7620	P10-P30 K25-K35	Steel, grey cast iron and spheroidal graphite iron	Wear-resistant type for medium to large chip cross sections, medium to high cutting speeds under good to average conditions
P	HC7630 HC7640	P20-P40 P25-P50	Steel	Very tough type for medium to large chip cross sections, medium cutting speeds under average to poor conditions, interrupted cutting
M	HC7510	M01-M20 P15-P25	Stainless, non-austenitic steel and steel	Ultra wear-resistant type for small to medium chip cross sections, high cutting speeds under good conditions
M	HC7520	M10-M30 S15-S25	Stainless, non-austenitic steel and materials that are difficult to machine	Wear-resistant type for medium to large chip cross sections, medium to high cutting speeds under good to average conditions.
M	HC7530	M20-M40 S25-S35	Stainless, austenitic, superaustenitic and duplex steel, as well as materials that are difficult to machine	Very tough type for medium to large chip cross sections, medium cutting speeds under average and poor conditions
K	HC6410	K05-K15 H25-H35	Grey cast iron and spheroidal graphite iron	Wear-resistant type for medium to large chip cross sections, medium to high cutting speeds under good to average conditions
N	HC6310	N05-N15 M00-M0	Aluminium alloys, copper and copper alloys as well as non-metallic materials and stainless austenitic steel	Wear-resistant type for small to medium chip cross sections, high cutting speeds under good conditions
N	HW6310	N05-N15	Aluminium alloys, copper and copper alloys as well as non-metallic materials	Wear-resistant type for small to medium chip cross sections, high cutting speeds under good conditions
S	HC7220	M10-M30 S10-S30	Stainless, non-austenitic steel and materials that are difficult to machine	Wear-resistant type for medium to large chip cross sections, medium to high cutting speeds under good to average conditions

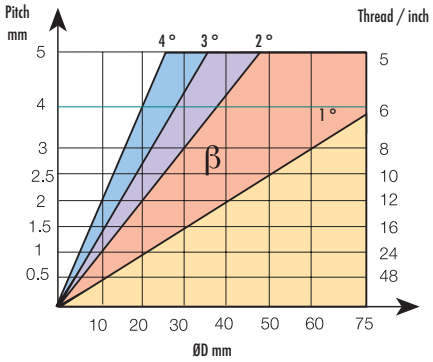
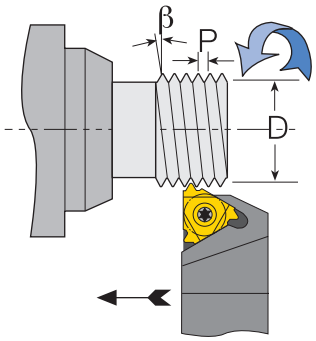
Choice of number of cuts

- The number of cuts should be increased for the mini or ultra-mini system, as well as for hard materials.

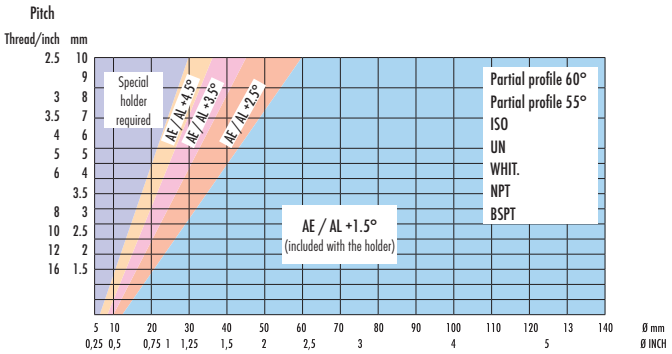
Pitch	mm TPI	0.5 48	1.0 24	1.5 16	2.0 12	2.5 10	3.0 8	4.0 6	6.0 4
Number of cuts		3 - 6	4 - 9	5 - 11	6 - 13	7 - 15	8 - 17	10 - 20	11 - 22



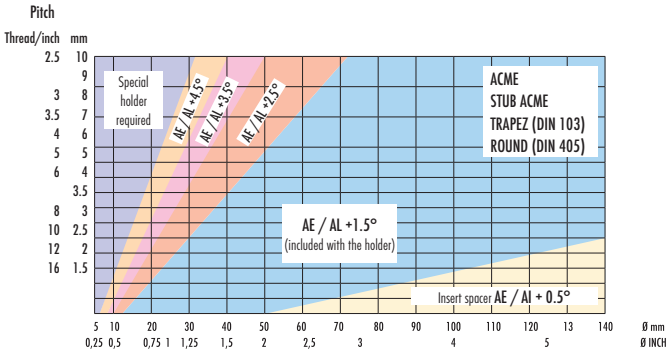
Pitch angle calculation and selection of spacers



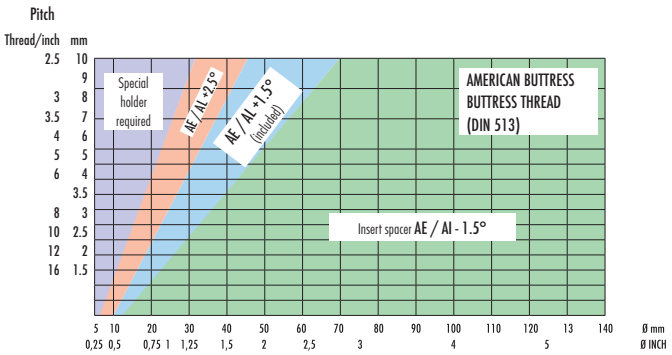
Formula for calculating the pitch angle β



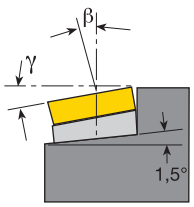
tan β = P (pitch) / ∏ x ØD



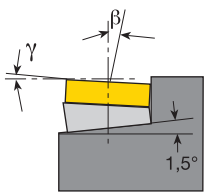
simplified: β = 20 x P / ØD



Example:
ØD = 30 mm, P = 1.5 mm:
β = 20 x 1.5 / 30 = 1



For most applications it is not necessary to change the spacer.
However if a change is necessary, please select:
AE spacers for EX-RH and IN-LH clamp mounting and
AI spacers for IN-RH and EX-LH clamp mounting



Spacers, positive pitch angle
For turning right-hand thread with right clamp mounting or left-hand thread with left clamp mounting

Spacers, negative pitch angle
For turning right-hand thread with left clamp mounting or left-hand thread with right clamp mounting

Important:
The dimension H remains constant for each spacer combination.

Positive pitch angle

Negative pitch angle

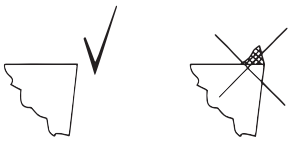
ATORN®
Performance demands quality

ATORN® Technical information

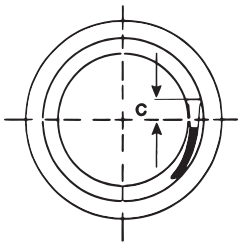
Improved chip control
- Replace worn cutting inserts
- Select more suitable chip control form
- Use neutral cutting insert
- Check perpendicular setting of the cutter holder
- Supply ample coolant
- Increase feed
- Temporarily suspend feed upon contact with the workpiece to allow the chips to pass into the chip guide.



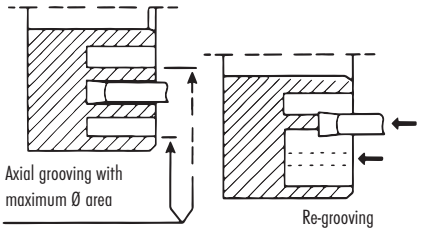
Eliminating rattling
- Part-off as closely as possible to the chuck, minimise cutter holder overhang
- Check clamping and tool structure
- Change rotational speed
- Increase feed
- Block support in conventional lathes

Prevention of bevel breakages
- Select suitable carbide type and cutting insert geometry
- Use cutting insert with larger corner radii
- Prevent rattle
- Avoid feed jerk at the end of the cutting procedure, possibly using a solid jerk limiter
- The fluid in the lathe hydraulic system must be 100% free of air bubbles
- Reduce the formation of built-up edges (to identify built-up edges as a reason for nicks, interrupt cutting and check cutting edge)

Prevention or reduction of built-up edges
- Select suitable carbide type and cutting insert geometry
- Increase cutting speed
- Ensure sufficient cooling, recommendation: oil-based coolant



Axial grooving and hollow drilling

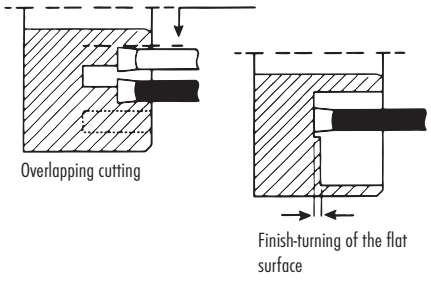


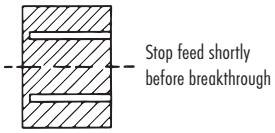
Application

Right cutting inserts should only be used in right-hand tools; left cutting inserts should only be used in left-hand tools. The cutting speed for axial grooving should be just 80% of the cutting speed for parting-off. The feed rate should be reduced to 50%.

Use plenty of coolant, aim coolant spray directly on the kerf.
- For compact holders and for the clamping shank / cutter holder combination, the dimension C described in the adjacent illustration must be integrated into the tool.

Expanding the groove (ramping)
- First make groove in the largest-possible diameter range of the workpiece
- Immediately continue with the overlapping grooving. Thus the smallest machining diameter is dictated by the cutting insert design (see illustration). The maximum diameter is unlimited.
- A cutting insert width of 0.9 x W is recommended for overlapping cuts.
- A clamp depth of no more than 0.1 x cutting insert width is recommended for the face finish-turning of the ramping.



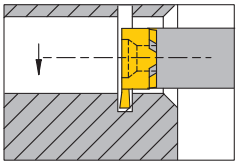


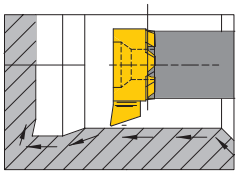
Cutting out
- To prevent tool damage caused by a loose core, stop feed briefly before breakthrough and penetrate the core with a plastic hammer.

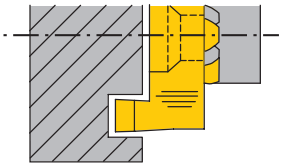
Precautionary measures

Carrier tools may not grate on the workpiece.

We recommend the following precautionary measures:
- Please observe the machining diameter of the tools. Grooves should only be made within this area.
- Align tool holder precisely with feed axis.
- For initial grooving with a new structure, stop feed at 1.5 mm punching depth and inspect. If there is friction, check tool height setting.
- Do not use worn or chipped cutting inserts







ATORN® Indexable inserts for grooving system DED

- Please adjust these guideline values according to clamping operation and machine set-up!

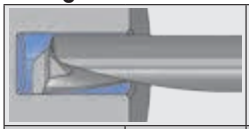
ATORN® Cutting inserts for keyway slotting

- Observe the undercut at the end of the cleared slot to allow free discharge of the tool.
- The cutting edge should not touch the base of the slot while the tool is retracting.
- Adjustment of the tool is not permitted. Therefore carefully check the diameter of the workpiece before you proceed.
- If you use oil or an emulsion, the chips are flushed away from the workpiece; this also helps to produce a perfect surface.
- If the tool is aligned upwards, the chips automatically fall downwards away from the cutting edge.
- Avoid interrupted cutting.

Guide values for slotting

Example:
Tempering steel e.g. 42CrMo4 with 1200 N/mm²
- Feed per lift 0.05-0.06 mm
- Feed f = 5500 mm/min



Cutting inserts DT

- Please adjust these guideline values according to clamping operation and machine set-up!
- **Feed values (f) are dependent on the coolant pressure:**
  Coolant pressure 10-30 bar: select lower third of the feed values
  Coolant pressure 30-70 bar: select upper half of the feed values
- the feed values (f) are also dependent on the material

palbit Grooving and parting-off system MINI

- Please adjust these guideline values according to clamping operation and machine set-up!

External machining: **right-hand** inserts and **right-hand** holders and/or **left-hand** inserts and **left-hand** holders

- Permanent cooling across the entire cutting surface is recommended.
- Particularly appropriate for automatic feed; manual feed can reduce the service life..
- The feed should be reduced by 10-15 % when using inserts with 7° clearance angle.

Live precision lathe centres

- High-performance design specially for CNC lathes
- Draw-off nut to company standards
- For high speeds and axial loads
- Excellent true-running accuracy thanks to the high-end bearing
- Fully hardened and ground
- Maintenance-free permanent lubrication
- Shaft sealing ring prevents the ingress of dirt and coolant
- With additional sealing, also suitable for grinding applications

Easy to use for tubes with large diameters

The extended running point guarantees the required clearance angle for turning parts with small diameters.

Ideal for bar stock with large diameters

Live precision centring taper

- For machining tubes and hollow bodies with large bores and centres
- Fully hardened and ground
- Maintenance-free permanent lubrication
- Shaft sealing ring prevents the ingress of dirt and coolant

RÖHM Constant CoE front face driver

- **Front face driver for turning and milling work**
- For efficiently turning workpieces along their entire length with high accuracy and without reclamping
- Simultaneously allows slots or toothing to be milled
- Developed with a modular concept, making the driving discs and corresponding centring points universally replaceable
- One unit consists of a base body, a driving disc and an appropriate centring point
- Technical pressure compensation produces equal clamping force even with uneven workpiece faces
- Spring-mounted centring point acts as a workpiece length stop on the front face
- Workpiece weight max. 100 kg
- Clamping diameter Ø 8 - 80 mm

Complete set CoAE for clockwise rotation
Supplied with:
- 1x base body
- 3x centring point (centring Ø 6, 12, 16 mm)
- 4x driving disc (clamping Ø 12, 20, 32, 50 mm)
  Maximum turning Ø corresponds to double the clamping Ø
  E.g.: clamping Ø 32 mm, max. turning Ø 64 mm

Universal lathe chuck

DIN 6350A

- **Made from cast iron**
- **CUSHMAN system, centric clamping**
- **With straight centre mount in accordance with DIN 6350**
- Made from fine-pored special cast iron
- For external and internal workpiece clamping
- **Supplied with:**
  Chuck key and attachment screws
  One set of boring jaws (stepped outward)
  One set of turning jaws (stepped inward)
- Additional chuck sizes and chucks with integrated short tapers are available on request

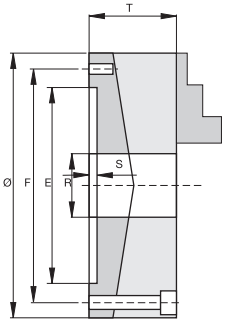
RÖHM Wedge bar chuck DURO-T

DIN 6350A DIN 55027



- **With jaw safety mechanism, centric clamping**
- Higher clamping forces
- Stiffer chuck body (guaranteed accuracy at higher loads)
- Chuck body fully surface-hardened
- High jaw change repeatability
- Optimised wearing parts (e.g. safety shut-off valve)
- True running and axial run-out tolerance twice as accurate as specified by DIN accuracy class 1
- Enhanced corrosion protection
- Compatible with base and top jaws from other manufacturers
- **Supplied with safety key (as demanded by EN 1550), set of reversible one-piece jaws or set of base jaws with reversible top jaws**

With straight centre mount, DIN 6350 A

RÖHM Manual collet chuck Captis-M

- Suitable for rotary and stationary machining
- Precise concentricity and repetition precision
- Uniform force distribution due to surrounding clamping
- Robust clamping thanks to axial infeed
- Compact design for optimal workpiece accessibility
- For clamping heads with manual changing fixture
- Also suitable for quick-change system ABSIS-C mandrel

Unscrewing device for 3 jaw chucks

- For internal turning of soft turning jaws
- For regrinding hard turning jaws
- For external and internal workpiece clamping
- Infinitely variable adjusting range
- Quick diameter adjustment

Kitagawa EUROPE Wedge hook power chuck BR

- **Model BR**
- **Increased clearance**
- **Repeatability precision of below 10µm**
  Repeatability of below 10µm can be achieved when used with Go-Nuts slotting nuts and Kitagawa SB jaws. Turned soft jaws for different clamping diameters can thus be exchanged with accuracy. Saves time and money!
- **Patented base jaw: up to 10% increased clamp force at maximum rotational speeds**
- All-steel design
- Hardened and ground guides
- High true running accuracy
- Lubrication fitting in every base jaw
- Centre mount in accordance with DIN 6353
- Supplied without flange, **without top jaws,** with toothed base jaws 1.5mm x 60°, standard T-slot nuts, chuck and jaw fastening screws, non-threaded drawbar nuts, special assembly key
- **Threaded drawbar nuts available on request**

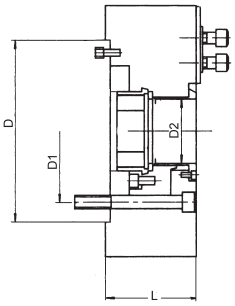
kitagawa EUROPE Wedge hook power chuck B/BT-200



DIN 6353

- **Model B/BT-200**
- **Large through-hole**
- All-steel design
- Hardened and ground guides
- High true-running accuracy
- Lubrication fitting in every base jaw
- Centre mount in accordance with DIN 6353
- Supplied without flange and **without top jaws**; includes 1.5 mm x 60° toothed base jaws, T-slot nuts, chuck and jaw fastening screws, unthreaded drawbar nuts, special assembly key
- Further sizes and models available on request
- **Threaded drawbar nuts available on request**

kitagawa EUROPE CRL power-operated collet chuck

- All-steel design, hardened and precision-ground
- For multi-range and steel collets in accordance with DIN 6343, 173 E or 185 E
- 2 sizes: up to material Ø 42 mm, or up to material Ø 60 mm
- Other sizes for a maximum material Ø 36 mm, 54 mm and 66 mm are available on request
- Equipped for use with a length stop, but only in combination with multi-range collets.
- For bar work on CNC lathes
- Especially for high speeds and true-running accuracies
- Supplied with chuck fastening screws and thrust collar (unthreaded)
- Without collets
- **Threaded drawbar nuts available on request**

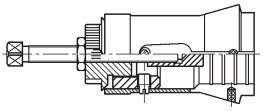
FAHRION® PRAZISION Emergency dead-length collets

DIN 6343

- **For internal turning**
- Hardened and tempered to approx. 45 HRC and fully ground
- Can be clamped in chucks using three removable alignment pins at the front, and can be machine-finished to the required bore diameter or with a stepped hole



Designation	D mm	D1 mm	D2 mm	L mm	Ø mm	art.no.	€
173 E	60	50	48	94	Pre-drilled to Ø 3	**433047** 0030	67,50
185 E	84	73	66	110	Pre-drilled to Ø 4	433049 0040	139,–

4119

SARA® Internal stop for dead-length collets

- **For dead length collets in accordance with DIN 6343**
- No collet shank deformation or impact on clamping behaviour
- Can also be used as a limit stop for hollow parts
- Can be used with round, hexagonal and square collets

for collets	art.no.	€
173 E	**433052** 0173	140,–
185 E	433052 0185	153,–

kitagawa EUROPE DHP power-operated collet chuck

- **Model DHP65**
- Compact design
- High accuracy
- Ideal for use in initial machining due to axial tension
- Fully compatible with commercially available 65 mm clamping heads
- Easily adaptable to existing machinery
- DHP65 chucks are lightweight and can be fitted quickly
- Supplied without collets or changing fixtures; includes blank unthreaded drawbar nut
- Additional chucks available on request
- **Threaded drawbar nuts available on request**

kitagawa EUROPE Power-operated collet chuck DKF

- **Model DKF65: clamp Ø max. 65 mm**
- Compact design
- High precision
- **Clamping without changing the axial position of the clamping head**
- Ideal for bar stock, secondary machining or inserts on a main or counter spindle
- Fully compatible with commercially available 65 mm clamping heads
- Easily adaptable to existing machinery
- Supplied without collets and switching equipment, includes blank unthreaded drawbar nut
- Threaded drawbar nuts available on request

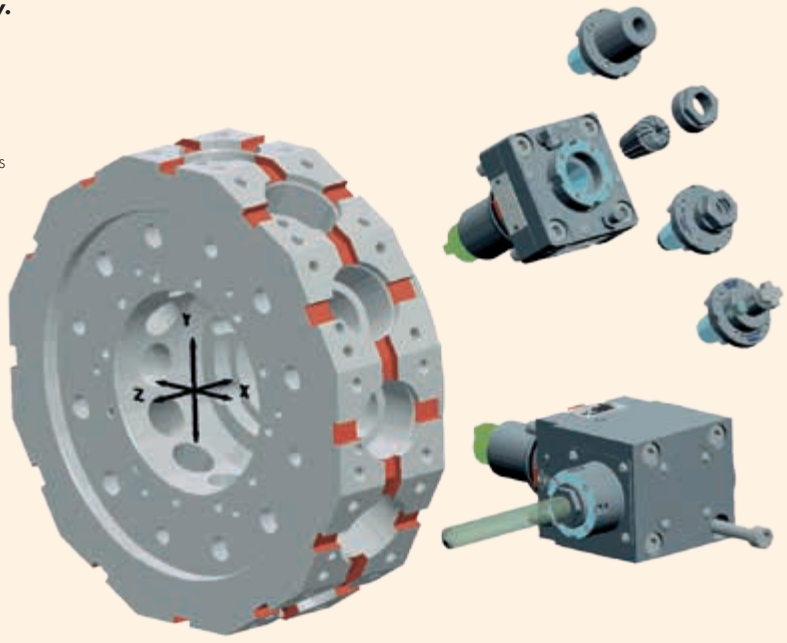
for CNC lathes
- Tools for complete production on CNC lathes
- Drilling, milling and thread cutting in one clamping operation
- Tools for axial or radial machining with the widest range of tool holders
- German production with in-house repair service

- **Use** with all common CNC lathes that are suitable for powered tools

- No conversion from turning to milling
- The widest variety of tools
- Lower fixture costs since second clamping is not required
- Compliance with the tightest shape and position tolerances as the workpiece is produced in a single clamping

Individual, no-obligation quotes for powered tools are available on request.

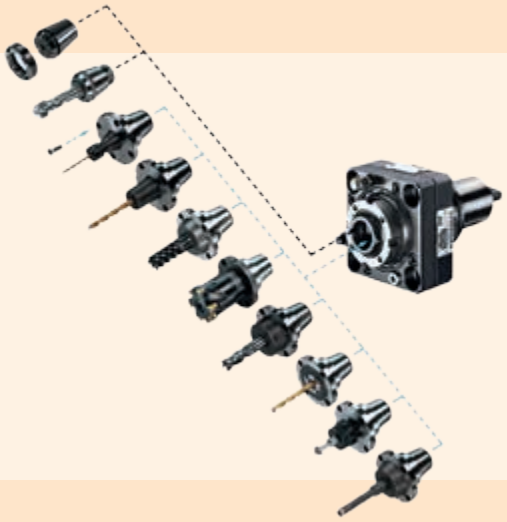


Revolver / tool concept

A very rigid and accurate system. Three important unmatched innovations for increased efficiency and productivity.

4 default slot nuts
- Simple conversion, no adjustment required
- Up to 300% greater repeatability compared with other systems
- Repeatability of the position <0.005 mm
- Alignment with the machine spindle <0.1 mm

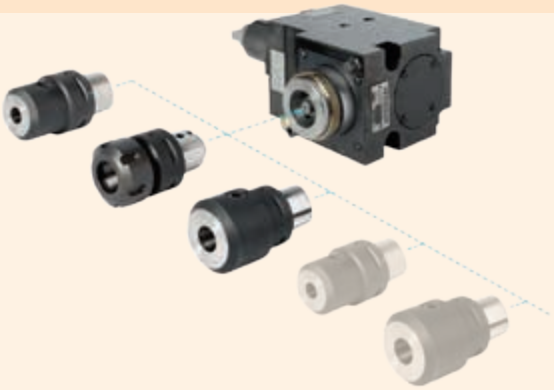
Compensating coupling
- Floating drive, minimal clearance
- Vibration and noise reduction
- Simple maintenance, long service life
- Improved torque transfer
  Contact surface enhanced by 60%



Rigid and flexible tool interface
- Use of standard collets and adapters
- Maximum accuracy
- Optimum rigidity and flexibility for heavy machining
- Greater machine output and lower production costs

EPPINGER SMARTER TOOLING SOLUTIONS PRECI-FLEX®

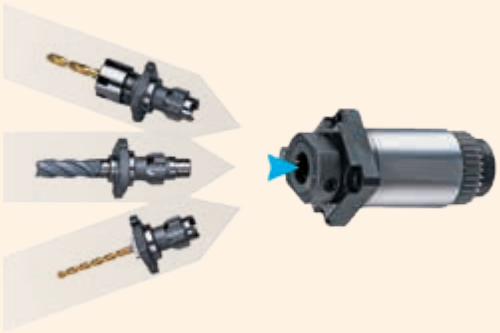
INFO



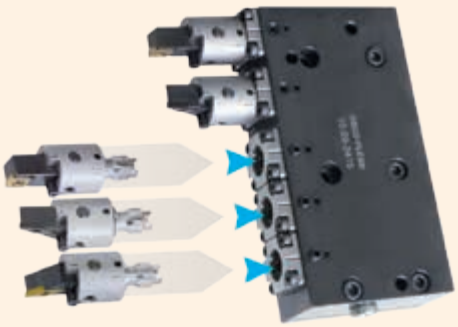
- The ESA Eppinger modular system creates completely new possibilities in precision, flexibility and efficiency.
- Interface based on standard collet mounts
- The benefits speak for themselves
- ER collet mount and PRECI-FLEX adapter in one tool holder
- maximum expansion capability
- taper/planar support, absolute precision
- very compact
- maximum rigidity, thus outstanding cutting performance
- long tool lives
- pre-settable
- quickly re-settable
- optimum efficiency

EPPINGER SMARTER TOOLING SOLUTIONS EPPINGER PSC

INFO



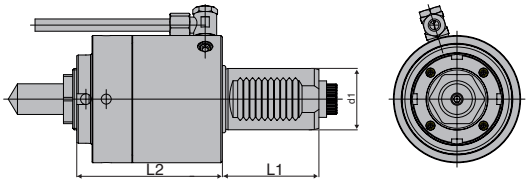
- world's shortest PSC interface
- lots of space – even for large workpieces
- compact design increases system rigidity and thus workpiece accuracy
- comfortable one-hand operation, fast tool changes
- available on request

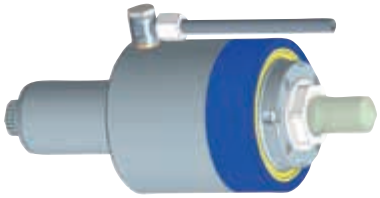


EPPINGER SMARTER TOOLING SOLUTIONS DECOFLEX®

INFO

- Tool holders with minimal dimensions
- particularly suited for use in small-scale lathe-milling machines
- available on request





EPPINGER SMARTER TOOLING SOLUTIONS PRECI-FLEX® powered tool holder with VDI shank

- **for CNC lathes with Sauter revolver and drive coupling DIN 5480**
- Each tool holder must be run-in. Thus temperature and noise emissions are monitored, measured and recorded.
- compact design of the single-piece base body
- very rigid bearing above taper roller bearing
- optimal position of the spindle
- patented seals to minimise heat generation
- internal cooling up to max. 70 bar
- all wear parts hardened and ground

Boring/milling head, straight collet mount

- ER collet mount
- Type 1 external cooling
- Type 2 external and internal cooling

SARA® Hydraulic expansion clamping unit ECOGRIP ER

powered by ETP

- renders ER collet systems hydraulic
- Adjustable radial run-out
- installed correctly, a true running accuracy of 0.003mm is achieved. The radial run-out can be further adjusted to the desired accuracy by slightly tightening the setting screws.

for powered tools with ER female thread

High-speed spindles Toodle Blue and Toodle Green

- **Toodle Blue, driven with coolant**
- **Toodle Green, driven with minimal lubrication**
- Turbine-driven high-speed spindle
- Rotational speeds of up to 75,000 rpm
- Consistent and high true running accuracy thanks to interchangeable bearings and turbine
- Can also be used with upright machine spindle
- Most demanding machine applications with a standard tool holder
- Affordable transformation of existing machine centres with standard spindles into high-speed and ultra-modern machining centres
- **Compatible with any sealed chuck with internal coolant supply**
  Example: SARA collet chucks ER40 Art. No. 4310034026 with sealed collet ER40 - Ø25 Art. No. 4331354025
- **NOT compatible with milling cutter holder DIN 6359 (Weldon holders)**, **cutting edge diameter** must be smaller than **shank diameter**

Toodle Blue high-speed spindle

- **Coolant pressure at the spindle: 10-60 bar**
- Coolant-driven
- Supplied without bearings and turbine

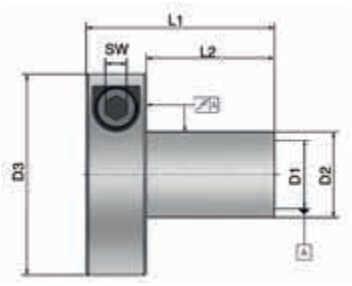
SARA® Hydraulic clamping system HYDRO-FIX

Hydraulic clamping system for boring bars and powered tools



The system is attached and clamped with just one screw. The clamp engages evenly with the workpiece and this increases the tool service life. The hydraulic clamping system absorbs and reduces vibrations, and thus increases the surface quality.

The equal and complete clamping of the shank significantly reduces the vibration amplitude.

HYDRO-FIX clamps simultaneously in both directions, the tool and in the tool holder.

powered by ETP

- Reduced vibrations
- Increased cutting speeds and/or feed rates
- Improved surface quality
- Increased tool life
- Quick and easy to handle
- Recommended shank tolerance h7
- Recommended bore tolerance H7

For boring bars

ATORN® Quick-change tool holders

- Profile-ground, toothed central body attached to the lathe support along with the base body
- The base body can accommodate an unlimited number of interchangeable holders for turning or drilling tools, one after the other.
- 40 different steel holder angle settings possible
- Repeatability ± 0.01 mm

The hole "R" in the centring screw must be enlarged to match the dimension of the clamping screw!

Quick-change tool holder

- For lathes
- Precise manufacture due to high precision and indexing accuracy (0.005 mm)
- Various production options (40 tool positions, 9° spacing possible)
- Quick height adjustment via adjusting screw
- Extremely flexible due to modular design
- Selecting the correct revolver head depends on the following parameters: lathe drive power, tool slide width C, turning tool height A

Assembly service on request

Hollow taper shank DIN 69893 shape A (HSK-A) with internal coolant supply

HSK	b2	b3	d2	d4	d5	d6	d9	f1	f2	f3	l1	h1
40	9	11	30	34	43	45	25,5	20	35	16	20	17
50	12	14	38	42	43	59,3	32	26	42	18	25	21
63	16	18	48	53	55	72,3	40	26	42	18	32	26,5

The different forms of hollow-taper shanks DIN 69893 (HSK)

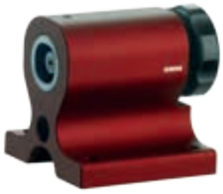
Shape A - Automatic tool switching
- Central coolant supply
- **Additional T**, a slot in the taper is a tighter fit

Shape B - As shape A, but with enlarged collar

Shape C - Central coolant supply
- without gripper groove

Shape D - As shape C, but with additional coolant supply via the collar

Shape E - For HSC machining
- Central coolant supply
- without carrier grooves, with gripper groove



Shape F - As shape E, but with enlarged collar

Depending on the design type, a coolant transfer pipe may be required for some machines with an HSK holding fixture. Please observe the machine manufacturer's information.

SARA® Assembly system

- Aluminium housing
- 4 x 90° swivel-mounted
- Steel modular tool holders
- Quick and easy replacement of holding fixtures
- High flexibility
- Positive-locking fixing of the tools
- No damage to cone tip
- **Interchangeable adapter for polygon shank according to DIN 26623-1 also available**

SARA® CNC foam stand for tool holders

- For careful, space-saving storage and arrangement of tool holders
- Made from EPP (expanded polypropylene) particle foam
- Oil, acid and coolant resistant, shock and fracture-proof
- Low unladen weight, easy to clean
- Holders can easily be cut to size and customised with a band saw
- Holders can be joined together easily and securely with a glue gun
- Supplied without tools

bedrunka+hirth CNC stand for tool holders

- For storing and arranging tool holders
- Can be flexibly equipped with various inserts (805030....)
- **Unless otherwise instructed, we supply the colour RAL 7035 (light grey)**
- **Two-colour CNC stands can also be ordered (see illustration)**
- **The standard colours shown below are available at no extra cost**
- **Supplied without inserts and tools**

bedrunka+hirth Tool inserts

- The insert is clipped into the system by means of a snap-fit closure (clip), and its spacing can easily be changed in increments of 25 mm at any time, without tools
- **Made from oil-resistant, shock-proof and fracture-proof ABS plastic**
- **Compatible with all Bedrunka+Hirth** CNC storage and transport systems
- Protective mounting and centring of tool holders
- Optimum use of space thanks to individually adjustable plastic inserts
- Functional modular system
- Knobs prevent tool holders from "adhering" to the surface of the inserts
- All tool sizes can be combined

Tool inserts

- made of shock-proof, oil-resistant ABS material

ATORN® NC short drill chuck with worm gear

- **Clamping by means of an integrated worm gear**
- Clamping range 1.0 to 16.0 mm
- High true running accuracy, max. 0.03 mm
- **Suitable for clockwise and anti-clockwise rotation**
- Long service life, wearing parts hardened and ground
- Balanced up to 7000 rpm With a residual imbalance of max. 40 g/mm
- Supplied with hexagonal key
- Max. permitted rotational speed with balanced tool 35,000 rpm

Clamping range 1.0 to 16.0 mm with internal coolant supply

DIN 69893 A (HSK)

ATORN® Precision ER collet chuck

True-running accuracy 3 µm incl. clamping nut

- **30° ground trapezoidal thread with special anti-friction coating**
- Up to twice the holding forces of conventional collet chucks are possible thanks to lower friction when tightening the nut and due to the collet being seated entirely inside the chuck cone.
- Resistant to temperature fluctuations and fully suitable for dry processes and hard milling up to 200 °C.
- Clamping forces are distributed evenly across the entire cylindrical surface, and optimum radial force absorption produces perfect surfaces
- Excellent damping properties
- Increasing the chuck body to the diameter of the clamping nut creates enormous stability without any protruding contours.
- **Extremely high concentricity and precision, 3 µm**
- **Pre-balanced to G 2.5 at 22,000 rpm**
- **Leak-proof up to 80 bar with radially sealed collets**
- **For all GER collets**
- **Supplied with clamping nut**
- **Please order roller chuck key separately**
  Torque wrench recommended

DIN 69893 HSK-A, incl. clamping nut

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

FAHRION® PRAZISION CENTRO|P precision ER collet chuck

True-running accuracy 1 µm

- **30° trapezoidal thread**
- With ground, extra-long double guide compared to 60° V-thread in conventional collet chucks
- Coated clamping nut reduces friction when tightening the nut
- Exact nut centring to minimise imbalance
- **Up to 100 % higher holding forces** compared with conventional collet chucks
- **Pre-balanced to G 2.5 at 25,000 rpm**
- **Entirely suitable** for dry processes and hard milling
- Insensitive to temperature fluctuations up to 200 °C
- **Leak-proof** up to 80 bar, cooling possible along the cutting edge
- **Extremely high system concentricity and precision of 3 µm achieved with a 2 µm GER-HP collet**
- **Supplied without clamping nuts or a chuck key, please order separately!**
- Slim and conical versions available on request

SARA® Milling cutter extension SARAmicro

- For holding tools with a clamping surface in accordance with DIN 1835 B (shank Ø 6 - 20 mm)
- Extremely slim design allows standard tools to be extended without the need for special tools
- Extremely stable due to combination clamping
- True-running accuracy: 5 µm

- **Use:** In standard tool holding fixtures of appropriate diameter (16 / 20 / 25 or 32 mm)

- **Note:** To ensure that the tool is correctly clamped, ensure that the clamp is properly seated in the hole!

ALBRECHT Precision chuck APC

- **True running accuracy 3 µm (at 2.5xD)**
- Greater clamping force and stability due to the enhanced clamping gear
- Clamping via a coated clamping sleeve and adjustable length stop
- Quick lateral tool changes using a hex key
- **Pre-balanced to G 2.5 at 20,000 rpm**
- Higher rotational speeds and finer balance quality available on request
- Sealed against coolant and dirt
- With precise length adjustment in the clamping sleeve
- Special steel, all parts hardened and ground
- Extremely high vibration dampening
- For heavy machining as well as HSC and HPC machining
- **Supplied without hexagonal key or clamping sleeve**
- **Additional versions available on request**

Including anti-corrosion coating

diebold Power chuck UltraGrip®

- Optimised radial run-out thanks to single-piece base body
- Maximum clamping force and stability thanks to clamping via rotary clamping nuts and needle bearings, thus clamping force of up to 4000Nm depending on Ø
- High precision and balance quality
- Flexible use thanks to reducing bushes
- Vibration-damping effect thanks to size and multi-part design
- Maximum protection against milling tools being extracted
- Internal coolant supply up to 80 bar suitable
- Maintenance-free technology
- Supplied without chuck key
- **balanced G2.5 / 20,000 rpm**

diebold Power chuck UltraJet® 3.0

The **UltraJet® 3.0** power chuck is an innovative combination of the established **JetSleeve®** principle and the **UltraGrip® 3.0** power chuck. When using the **UltraJet® 3.0** it is almost impossible to run through the chips during heavy machining, which results in even higher cutting data and considerably longer tool service lives. The coolant supply is channelled at high pressure through **the UltraJet® 3.0** mount and through the advanced nozzle configuration onto the cutting tool. The Venturi effect keeps the mixture on the tool cutting edge, irrespective of rotational speed.

- Optimised radial run-out thanks to single-piece base body
- Maximum clamping force and stability thanks to clamping via rotary clamping nuts and needle bearings, thus clamping force of up to 4000Nm depending on Ø
- High precision and balance quality
- Flexible use thanks to reducing bushes

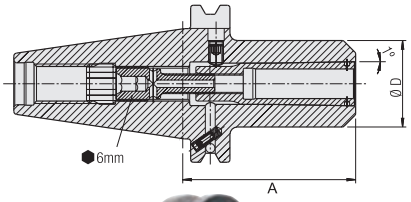
HAIMER® High-precision chuck HG

- Straight shank tools clamped with a high level precision using HG collets
- Very well suited to high-speed machining
- Taper angle tolerance quality AT3
- Finely balanced to G 2.5 at 25,000 rpm
- **True-running accuracy: 3 µm**
- Supplied with clamping screw and pull-out hook, no collet



DIN 69893-1 HSK-A

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

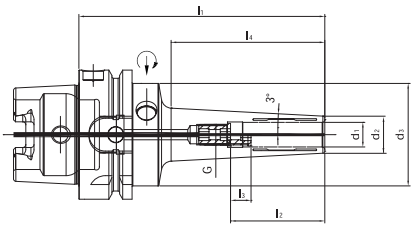
ATORN® Hydraulic expansion chuck, ultra-slim

Thanks to an innovative production process, the ultra-slim hydraulic expansion chuck combines the benefits of an expansion chuck and those of a shrink-fit chuck in a single product.



- Exceptionally high clamping forces
- Very high temperature resistance
- **Chuck remains accurate at high temperatures (up to 120 °C)**
- Designed with the slim shape of a shrink-fit chuck – suitable for use with tight protruding contours
- Very good damping
- Max. true running accuracy < 0.003 mm
- Tool changes carried out as with an expansion chuck, no need for additional equipment
- Versatile applications with reducing bushes
- **Pre-balanced to G 2.5 at 25,000 rpm**
- With Balluffchip bore

DIN 69893 HSK-A

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

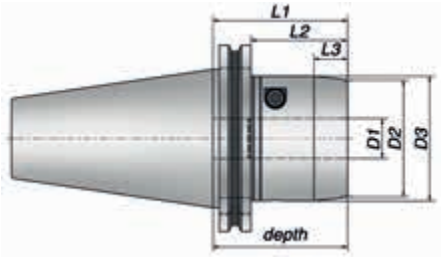
SARA® Hydraulic expansion chuck HYDRO-Grip HD

powered by ETP

- **HSK 63 and ISO 40 pre-balanced to G2.5 / 25,000 rpm**
- **HSK 100 and ISO 50 pre-balanced to G2.5 / 14,000 rpm**
- True running accuracy < 0.004 mm at 2.5 x D
- Tool shank quality h6 or h7
- Also suitable for reducing bushes
- Rigid construction and high clamping force for heavy-duty machining



DIN 69893 Form A - HSK-A

- Internal coolant supply
- When machining with inner coolant supply, a coolant transfer pipe Art. No. 431011.... should be used

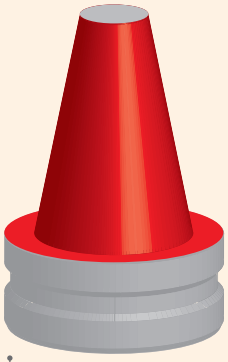
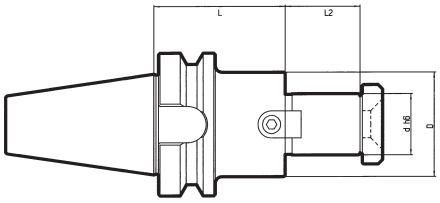
ATORN® Tool mounts with levelling



INFO

for use in machine spindles with planar support

- high rigidity due to the planar support between spindle and tool mount above the collar
- planar support ensures axial positioning accuracy
- suitable for high rotational speeds, spindle expansion (through centrifugal forces) have no further influence on the tool mount in axial direction
- considerable decrease in vibration through traction on the taper/planar support
- Increased service life in cutting tools



TRACTION THROUGH TAPER/PLANAR SUPPORT
compared with conventional tool mounts

FULL-SERVICE CONTACT
Taper and planar support

ATORN® Transverse slot shell-type milling cutter arbour with planar support

- **Pre-balanced G6.3 / 25,000 rpm**
- Taper angle tolerance quality < AT3 in accordance with DIN 7187
- Max. true running accuracy < 0.005 mm
- Internal coolant supply
- Case hardened to HRC 60 ± 2

ATORN® OZ collet chuck

DIN 6391

- **For DIN 6388 collets**
- **Pre-balanced to G 2.5 / 25,000 rpm**
- Alloyed case-hardened steel with a core tensile strength of min. 950 N/mm²
- case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8 mm ± 0.2 mm, burnished
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080, max. true running accuracy < 0.005 mm
- Supplied with clamping nut
- **Additional shank designs and AD/AF versions available on request**
- **Suitable hook spanner under Article No. 701550....**

ATORN® ER collet chuck

- **For DIN 6499 ER collets**
- **Pre-balanced to G 2.5 / 25,000 rpm**
- Alloyed case-hardened steel with a core tensile strength of min. 950 N/mm², case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8 mm ± 0.2 mm, burnished
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080, max. true running accuracy < 0.005 mm
- Supplied with clamping nut
- **Additional shank designs and AD/AF version available on request**
- **ER16 / 426E* tool holding fixtures supplied with hexagonal nut**

DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

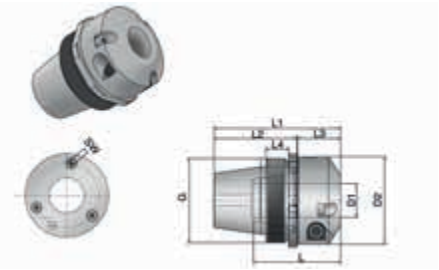
SARA® Hydraulic expansion clamping unit ECOGRIP ER

powered by ETP

- renders ER collet systems hydraulic
- Adjustable radial run-out
- installed correctly, a true running accuracy of 0.003mm is achieved. The radial run-out can be further adjusted to the desired accuracy by slightly tightening the setting screws.



For ER collet systems with external thread

Clamping screws for milling cutter holding fixtures, DIN 6359

Weldon clamping screws, DIN 1835 B

- For clamping DIN 1835 B straight shanks in DIN 6359/1835 Part 2 - 3 milling cutter arbours (Weldon jaw chuck)
- For standard and long chuck designs
- Clamping screws for short chuck versions (Ø 16 / 20 / 25 A = 35 mm, Ø 32 A = 65 mm) available on request

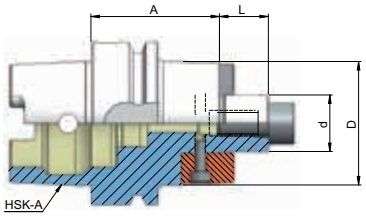
ATORN® Shell-type milling cutter arbour with transverse slot



DIN 6357

- **with enlarged collar diameter and coolant mounts**
- **pre-balanced G 2.5 / 25,000 rpm**
- alloyed case-hardened steel, tensile strength at core min. 950N/mm2
- case-hardened to HRC 60 ± 2 (HV 700 ± 50), case depth 0.8mm ± 0.2mm
- Taper angle tolerance quality < AT3 in accordance with DIN 7187 and DIN 2080
- max. True running accuracy < 0.005mm
- Supplied with carrier blocks and milling cutter retaining screw
- **Additional shank designs and AD/AF version available on request**

DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used
- *= Also with four DIN 2079-compliant threaded bores for holding cutter heads

Cutter retaining screw for milling cutter arbours

- **For milling cutter arbours, holding fixtures for cutter heads and milling cutters with transverse slots**
- The different pitches of the two threads on the threaded bolt create a strong locking effect. The milling cutter is securely clamped without a major exertion of force, tube extensions or hammer blows.

diebold Innovations in shrink-fit technology

INFO

New units with innovative temperature control and automatic cooling
Diebold Series US 1100 shrink-fit units are available in both a horizontal and a vertical version. If the units are equipped with **pyrometer control**, the shrinking process runs under controlled temperature. The pyrometer technology in the coil ensures direct temperature monitoring. A world-first solution for more reliable and gentle tool shrinking (in and out).
The temperature is measured directly on the shrink-fit holder and automatically controlled during the shrink-fit process by way of **TempControl**. This is revolutionary, as until now all conventional shrink-fit units have controlled the shrink-fit process indirectly via stored parameters but the actual temperature of the shrink-fit unit was unknown.

Video on YouTube channel

US 1100 with automatic TubeChiller cooling of the tool holder.
With the TubeChiller we offer you a fully-automated solution for the optimal shrinkage and automatic cooling of tools. This technology was developed to combine our US 1100 Series shrink-fit units with the automatic cooling of the TubeChiller.

Advantages of the Diebold shrink-fit technology

1. US 1100 shrink-fit unit with pyrometer control for automatic temperature recognition
2. Horizontal and vertical units cover all applications
3. TubeChiller for automatic "hands-free" cooling
4. Gentle shrinking, which means no overheating of the shrink fit holder, for long service life of your shrink fit holder
5. Finely-tuned parameters for shrinking in all shrinking units
6. High-quality stainless steel shrink fit holder
7. No increase in tolerances through artificial ageing of the material
8. Thus higher quality and longer usability of the high accuracy
9. Production in fully-air-conditioned hall, quality assurance in Grade 2 measurement rooms

Following the shrinking process, the cooling pipe moves upwards from the TubeChiller while the coolant rises in the cooling pipe and flows around the tool in a circle. Through this movement the induction coil is automatically returned to its start position without any additional drive required. Once cooled, the cooling pipe is lowered again, the liquid flows back into the tank in the sub-structure and the tool mount is dried efficiently with compressed air.

diebold Inductive shrink-fit unit ThermoGrip MS502-P

- Gentle and targeted heating thanks to parameterised generator output
- Simple and secure handling
- Also suitable for standard chucks, Ø 3 to 16 mm
- Gentle heating thanks to controllable generator output
- Low heat output, cooling using air cooling unit is sufficient
- Only suitable for carbide shanks
- Supplied with 4 shielding rings and protective gloves, no tool holder

4129

diebold Inductive shrink-fit unit ThermoGrip US1100, with pyrometer coil

The pyrometer coil also permits automatic and direct temperature control of the shrink-fit holder during heating. This prevents burning the shrink-fit holder. The quick and reliable shrinking process requires no prior identification of the shrink-fit holder.

- Shrink length approx. 500mm
- Shrinking of SC shanks measuring Ø3 - 20mm and HSS steel shanks measuring Ø 6 - 32mm
- Manual shrink-fitting possible
- Contour-independent cooling, cleaning and preserving can be carried out when used together with the ATORN cooling station
- **Supplied with 5 ferrite discs, protective gloves and pyrometer coil**

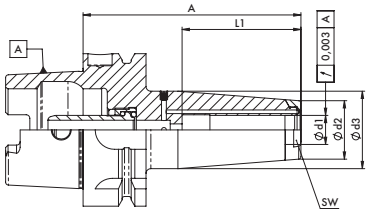
diebold JetSleeve 2® ThermoGrip® shrink fit holders

- **Revolutionary solution for mould engineering and HSC machining**
- **Standard version suitable for air and cooling lubricant, versions for minimum volume lubrication available on request**
- The coolant is fed via various nozzles directly to the cutting edge. Chips are blown away and not run through.
- Up to 300 % higher endurance
- No surface scratching by chips
- Optimum tool holder cooling right through to the cutting edge
- **Innovation in the JetSleeve 2®**
  Rotating chuck with media duct, the milling machine does not need to be retrofitted .Pressure is built up in the nozzle unit, and the flow effect from the nozzles keeps the coolant jet on the milling cutter shank at all times. JetSleeve chucks can be used on all conventional milling machines with internal coolant supply
- Suitable for all agents: air, minimum volume lubrication, cutting fluid
- Energy-efficient and environmentally friendly
- **Shrinking with screwed-on nozzle cover possible**



HSK A DIN 69893

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used

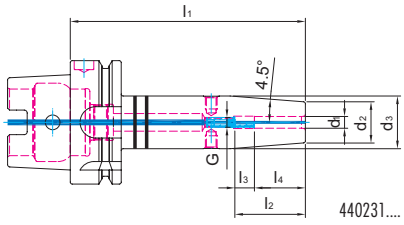
Heavy machining

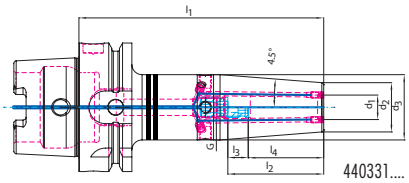
Shrink-fit mounts with coolant bores for heavy-duty machining available on request!

Size and shape result in a high degree of passive vibration damping.



ATORN® Shrink-fit holding fixtures 4.5°

- High true running accuracy of below 0.003 mm
- Highest dimensional accuracy of the workpiece
- High torque transfer
- 4.5° range
- High contour flexibility
- Heat-resistant mild steel
- **Balanced to G 2.5 / 25,000 rpm**
- With Balluffchip bore



HSK-A DIN 69893

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe Article No. 431011.... should be used

440231....

440331....

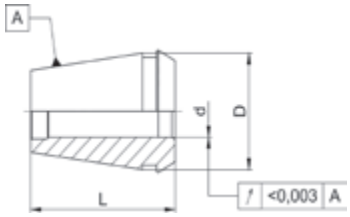
diebold ThermoGrip® Shrink fit collets TER

- Optimum concentricity < 3 µm
- Good changeover accuracy
- Maximum holding forces
- Excellent dimensional stability
- **Use in collet chucks**
  Standard ER chucks with standard clamping nuts can be used. The collet is coolant-proof, no dirt in the slots means no soiling to the clamping taper.
  Use in powered tool holders
  Clamped as short as possible, extremely rigid, no unwanted movement of the cutting tool, maximum production accuracy
  Use directly in the machine spindle
  High changeover accuracy, minimal imbalance, very short design



Use e.g. in collet chucks or powered tool holding fixtures

Shrink-fit collets TER in accordance with DIN 6499

ATORN® Thread cutting machine

- **Electrically powered motor**
- 220 V electrical connection is sufficient
- For M2 - M14 steel threads
- For M2 - M16 aluminium threads
- Vertical and horizontal thread cutting
- Operating range - radius 75 mm to 885 mm
- Operating range - height 565 mm
- For holding quick-release inserts with Ø 19 (e.g. art.no. 44250519..)
- Supplied with a base tool holding fixture, an articulated arm for vertical thread cutting and a tilting adapter for horizontal thread cutting **(please order quick-change chucks or quick-release inserts separately)**
- **Automatic tool lubrication and pneumatic version available on request**

SARA® Thread cutting device

- Manual thread cutting on hand-fed drills
- Maintenance-free, for use with right-hand and left-hand threads
- No need to reverse the spindle thanks to the integrated indexable thread
- Automatic shut-off by a low-wear ball system when the machine spindle is withdrawn once the thread depth has been reached
- Stopping arm must be secured against twisting before operation
- Supplied without inserts

Tap clamping sleeve

- **Torsion-free design**
- Tap clamping sleeve for machines with a synchronous thread cutting mechanism
- **Use:** In conventional DIN 1835 B (Weldon) chucks,
  Thread cutting in hard-to-reach areas
- Synchronisation between speed and forward thrust, no slip between the sleeve and drill bit
- 100 % cooling at the cutting edge with internal coolant supply

SARA® Thread cutting quick-change chuck

- Automatic insert locking
- **Flexible length compensation under compression and tension**
- For quick-release inserts with adjustable safety coupling
- Minimal residual torque prevents tap breakage
- For thread cutting on mechanical and digitally controlled radial drills as well as drilling and milling machines
- Further sizes are available on request

ATORN® Thread cutting quick-change chuck for synchronous spindles

- **Minimal length compensation** thanks to damping element
- Secure clamping in quick-release inserts for ER collets
- Clamping screws to prevent the clamped tap from twisting
- For use on drilling machines and machining centres with synchronous spindles

Also available for machines with minimum-volume lubrication

DIN 69893 type A (HSK-A)

- Internal coolant supply
- When machining with internal coolant supply, a coolant transfer pipe with art.no. 431011... should be used
- Supplied without quick-release insert

bilz ER synchro insert STA

The **STA** (**S**ynchro **T**apping **A**daptor) synchro insert was specially developed for ER collet holding fixtures and allows tapping and forming on machines with synchronised spindles.

- For ER collet holding fixtures and powered tools
- Compensation for synchronisation errors
- Minimal length compensation under compression and tension
- Minimal strain on the thread flanks
- Compact design
- Internal coolant supply suitable up to 50 bar
- Suitable for left-hand and right-hand thread
- **Only used standard clamping nuts in accordance with SO15488 (DIN6499)**
- **Not for sealed nuts or mini nuts**

ROHM Precision clamp with quick adjustment

- **Quick adjustment**
- Maximum accuracy
- Made from alloyed tool steel, hardened and finely ground on all sides
- Easy to clamp and release with a hex key
- Clamping jaw can be adjusted in steps; engages automatically
- Pull-down effect
- Suitable for grinding, milling and engraving machines, jig boring machines, measuring and inspection work, and any production processes that demand the highest clamping accuracy

ATORN® Clamping jaws with positioning pins

- Fast and precise machining of various workpieces
- Retooling in seconds for various machining tasks
- Loose underlays are no longer needed, nor is time-consuming cleaning
- Stable and robust lightweight design
- Also suitable for high clamping forces.
- Compressed air flow via vents on both front faces
- Recommended air pressure: 5.5 bar
- Closed on all sides when installed, so very low-maintenance
- Premium tool steel, hardened, ground and treated with a special oxidation process

SARA® Side and pull-down clamping jaws

- High-quality tool steel hardened by a subsequent oxidation process
- Lateral stop via M8 attachment hole
- Greatest precision when clamping by pressing the tool **simultaneously** when clamping on the base and lateral stop.
- Option for rapid switching from pulling left to pulling right
- Side pull to 0.5 mm
- Pull-down to 2.25 mm

- **Note:** use of clamping jaws in pairs is recommended

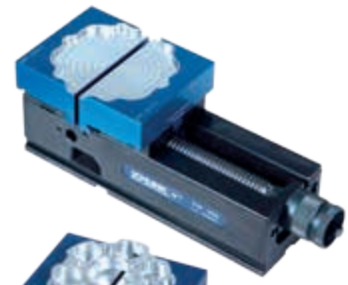
ATORN® Quick-change jaw system

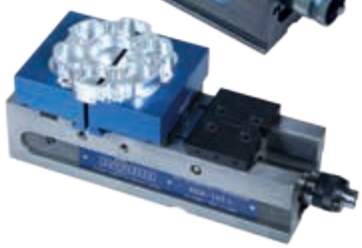
Quick-change system

- **The system can be adapted to all known vices; this level of compatibility makes it extremely flexible.**
- The holding, guiding and locking concept offers maximum reliability in production
- Unprecedented cost-effectiveness and measurable benefits in daily use
- Top jaws are quick to change in less than 30 seconds, leading to significantly reduced tooling costs

Top jaws

- Top jaws made from high-strength aluminium and case-hardened steel are available in various widths.
- The wide variety and numerous combination options can accommodate almost any clamping task
- Milling-off old clamping contours allows the top jaws to be used multiple times.





Base jaw set

fresmak ARNOLD High-pressure machine vice

- **Mechanical/mechanical** or **mechanical/hydraulic**
- Base body and clamping jaw holder made from high-quality ductile iron, GJS 70
- Clamping precision within 0.01 mm at the same clamping pressure
- Both clamping areas can be roughly set in a matter of seconds via bolts (covered clamping areas)
- Aligned on the work table via longitudinal or transverse slots (20H7) in the base surface
- All wearing parts, clamping jaws and guideways hardened and ground (60 HRC)
- Multiple vices of the same height are available with a **pair accuracy of 0.01 mm**
- Spindle can be optionally replaced with a pneumatic/hydraulic version
- Supplied with 1 pair of smooth jaws and 1 hand crank, **without swivel base**

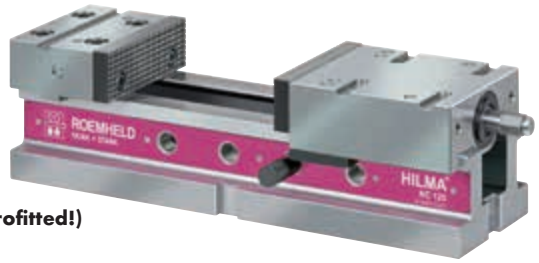
ROEMHELD HILMA • STARK EuroLine NC high-pressure machine vice

- **Type EL, mechanical-hydraulic**
- **Dependable and cost-effective**
- Threaded bores for workpiece stops in both sides of the fixed jaw as standard
- Replaceable, hardened clamping jaws (1st side smooth, 2nd side grooved)
- Guideways hardened and ground
- Desired clamping range can be roughly pre-selected via socket pin
- Spindle and power transmission integrated and protected inside the slide body
- Straightforward maintenance and cleaning: the slide body can be removed in a single action
- For tool and mould making, fixture construction, production

- Supplied with standard smooth/grooved indexable jaws, hand crank, operating manual



- 457001 2161 = incl. angular drive

ROEMHELD HILMA • STARK NC NC high-pressure machine vice

- **Type NC, mechanical-hydraulic**
- **Versatile and flexible**
- Longitudinal and transverse slots as standard for quick positioning
- Slots and threaded bores on slide and fixed jaw for holding standard and special large-span jaws
- Threaded bores on both sides for workpiece stops
- Clamping edge for clamping claws
- Guideways hardened and ground
- Desired clamping range can be roughly pre-selected via socket pin
- Resistant to deformation thanks to the new bottom cross section and new fixed jaw
- Mounting hole layout for extra high clamping jaws
- For tool and mould making, fixture construction, production
- Supplied with standard smooth/grooved indexable jaws, hand crank, operating manual
- **Longer versions and clamping force monitoring available on request (cannot be retrofitted!)**

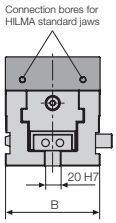
ROEMHELD HILMA ▪ STARK KNC NC high-pressure machine vice



- **KNC type, mechanical-hydraulic**
- **For the toughest requirements**
- Fully encapsulated spindle and power transmission, reliable protection against chips
- With stepped indexable jaws as standard, smooth rear side, with connection bores for almost all HILMA clamping jaw systems
- Desired clamping range can be roughly pre-selected via socket pin
- Locking device for mechanically clamping sensitive workpieces (optional accessories)
- All-steel design with internal slide guide
- 20 H7 cross slots for horizontal clamping

ATORN® NC high-pressure machine vice MH-S 125

- **Mechanical/hydraulic**
- Robust steel base body
- Hardened and ground guideways
- Repetition precision ≤ 0.01 mm
- Versions with fastening bores for lateral clamping available on request, for bed length D = 470 mm, attachment screws for groove spacing 63 mm and 100 mm are pre-mounted
- Locating pin for quick pre-positioning
- Simple cleaning due to removable upper slides
- **Bed lengths up to 1200 mm and hydraulically-controlled versions available on request**
- Supplied with jaws and hand crank

With interchangeable slider

Standard version mech./hydr.

RÖHM RKE NC high-pressure machine vice

- Particularly suitable for use on machining centres
- Horizontal, lateral, or vertical clamping with a base plate, for example as a DUO clamping tower (back to back)
- **Size 92**
  Mechanical-hydraulic clamping system with power transmission, manually operated.
- **Size 125, 160**
  Mechanical-mechanical clamping system with power transmission, manually operated
- Base body and all guides are hardened and ground on all sides
- Long clamping slide with transverse slots, hardened on all sides, functional surfaces ground
- Drive spindle with pre-set clamping force
- Clamping surface for clamping claws
- Central lubrication fitting for easy guide and spindle thread lubrication
- Stable chip guard prevents chips from entering into the body
- Threaded bores for holding all RÖHM flat clamping jaws with jaw widths of 125 / 160 mm
- Angle drive connecting thread

ATORN® 5-axis compact clamp

- Body made from ductile iron, GJS 600
- Guideways hardened and ground
- Clamping force 40 kN at 110 Nm
- Patented quick adjustment of the clamping width
- Enclosed spindle
- Secure holding forces due to re-tensioning spring package
- Supplied without crank or torque wrench
- **Suitable torque wrench: article no. 702602 0004 (to be used without sockets)**

ATORN® 5-axis combination clamp AZS-100

- **Centring vice and fixed jaw clamp in one**
- quick and easy spindle retooling
- mechanical clamping system
- high clamp force with low tightening torque
- very high basic rigidity, allows low-vibration machining
- all guide surfaces hardened and ground
- integrated boreholes for zero-point clamping systems
  Adapter available on request
- Clamp force data and scaling for guidance on basic body
- extensive jaw range
- **Supplied with 1 x grip jaw set 3.5mm, 1 short shaft and 4 clamping jaws**

Combination clamp AZS-100

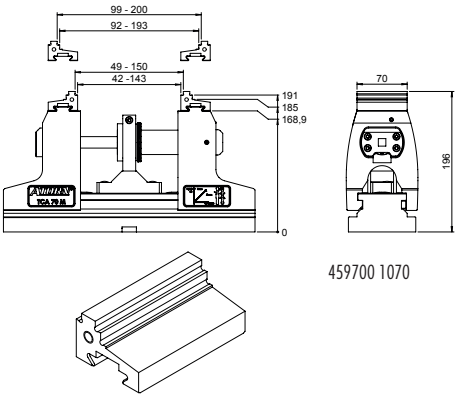
ATORN® 5-axis clamping system TCA70

With central clamp for 5-sided machining. Thanks to the design and central telescopic spindles, the protruding contours remain unchanged regardless of the clamp width. Excellent accessibility of all sides is guaranteed. The series-standard quick-change jaw system reduces tooling times and increases flexibility.



- Ideal for use on 5-axis machining centres
- Conventional clamping and grip clamping possible
- Telescopic spindle, protruding contour remains unchanged
- Central, simple programming without zero offset
- Material allowance is distributed symmetrically
- Repetition precision 0.01 mm
- Centring accuracy 0.02 mm
- Workpiece accessibility irrespective of the clamp width
- Symmetrical design = workpiece remains central and parallel
- Workpiece support height = 192 mm
- Quick-change jaw system, tool-free jaw changing thanks to quick-release lock
- Reversible jaws: for min. / max. clamp width with one pair of jaws
- Constant clamp force thanks to low-maintenance telescopic spindle
- Supplied as standard with locating bores for zero-point clamping system, pitch 200 mm
- Work table attachment also with through-bolts / fitting screws
- In 50 / 63 mm grid or clamping claws
- Integrated scale ring for fine adjustment of the central position
- Clamp force 30 kN at 45 Nm linear
- Operation with torque wrenches
- **Supplied with**
  1 ATORN TCA70 without jaws
  1 support plate for transportation
  1 hand crank for pre-setting
  Please order clamping jaws separately

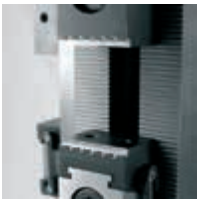
ATORN® Modular multi-clamping fixture

- Quick and precise workpiece clamping on vertical and horizontal machining centres, milling and grinding machines
- Standard clamping device for different workpieces
- Wedge clamps of various sizes can be used
- Allows different workpieces to be clamped in extremely confined spaces
- Multiple slide rails combined by means of a connection system, optimum length adjustment to the work table
- **Tombstones available on request**
- **60° toothing**

Particular benefits:

- Perform numerous clamping tasks with one clamping system
- Can also be used on ATORN zero-point clamping systems
- All system components are compatible
- Easy-to-install stop system
- Cost-effective clamping system



Multi-clamping slide rail sets

- Rail-mounted clamping elements
- Other combinations available on request

SARA® Modular multi-clamping fixture

- Mechanical clamping fixture with a modular design
- Accuracy: within 0.02 mm
- Base body made from hardened steel, 60 HRC
- Fully equipped for clamping four workpieces; can be optionally extended to a maximum of 9 clamping positions (see table below)
- Clamping jaws are 1 mm narrower than the base body, allowing lateral use of the clamp
- Also available with stepped jaws on request; prismatic jaws available as accessories
- **Supplied with** four tool stops, clamping claws, slot nuts, alignment blocks, lifting screws and a chuck key, one fixed jaw and four intermediate jaws

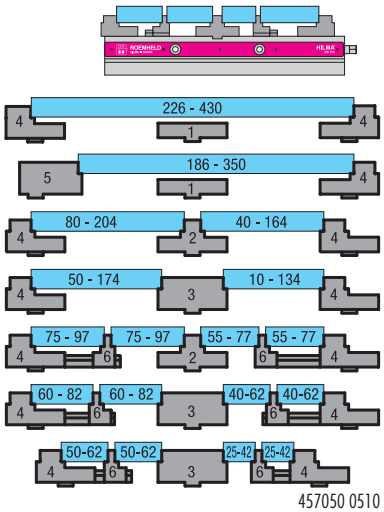
ROEMHELD HILMA ▪ STARK Double clamping system DS



- **Type DS, mechanically operated**
- **Efficient and cost-effective**
- Clamps multiple workpieces of the same or different sizes
- 3rd hand function
- Fully enclosed spindle chamber
- Zero-play linear guide guarantees the utmost precision
- Can be mounted on the work table using slides
- Clamping force can be preselected using a torque wrench (optional)
- Tool and mould making, manufacturing and mass production
- **Supplied without jaws or crank**
- **Caution: Spindle cannot be used without mounted jaws!**

Ring Spannsysteme 3-way clamping tower RS-T

- ultra-efficient, compact and space-saving
- high productivity thanks to considerably higher machine productivity during unmanned shifts
- fewer tool changes thanks to multiple set-ups
- max. parts size 100 x 100mm x variable length with a displacement circle of 350mm
- high efficiency
- prepared for ATORN ZPS K20 and Lang Quick Point 52
- **clamping jaws also suitable for embossing systems**
- **other adaptations for your machine tables available on request**

Clamping with a vacuum

Innovative ATORN vacuum clamping technology

When the focus lies on tooling time and safety

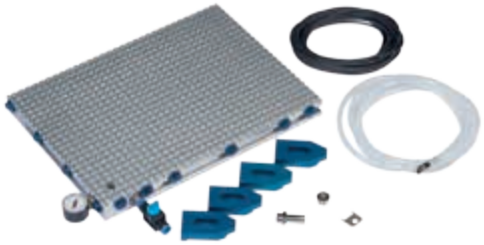
Vacuum clamping technology is particularly suitable for minimized setup time and process-safe clamping of flat workpieces with level undersides that are to be clamped and machined non-destructively.
For this we offer innovative and sophisticated solutions with many accessories – for optimum and individual clamping.
When it comes to precision and you want to handle workpieces made of aluminium, non-ferrous metals, graphite, plastics, glass, wood, ceramic, titanium and steel, the ATORN clamping plate sets lay down an excellent foundation for the work. These sets allow firm and precise clamping of your workpieces, delivering in turn good results from milling or drilling.
Vacuum systems hold the workpiece fast through suction and provide an excellent grip. Using a Venturi tube or a vacuum pump has proven very useful here.

Why you will achieve more with the ATORN vacuum clamping technology

One set, two options. This is what makes the new ATORN vacuum clamping system stand out.
The new low-cost entry into the vacuum clamping technology for short-term wins out through its use of the Venturi principle. The vacuum is created through a direct connection to the compressed air supply without a vacuum pump unit. For energy-saving continuous use in series production, a vacuum pump unit is advisable.
You can clamp indirectly by means of sandwich adapter mats or directly on a grid plate. The use of adapter plates or rubber adapter mats offers two important advantages:

- Producing break-outs in the workpiece machining
- Marked reduction of the clamping times, since, in comparison with fastening directly to the grid plate, no packing cords are needed

Variants:



- ATORN slot plate for clamping micro-components and workpieces with the most widely varied contours
- ATORN grid plates for clamping simple workpieces for heavy machining
- ATORN adapter mats for workpieces with and without break-outs

ATORN® Vacuum clamping technology

Grid vacuum plate sets with Venturi nozzles

- **Can be extended with conventional vacuum pumps, making it suitable for wet machining**
- For workpieces with simple geometric shapes
- Good seal: also suitable for rough (e.g. sawn) surfaces
- High holding forces
- Minor irregularities and concavities are sealed and compensated by flexible sealing cords
- **Each set comprises:**
- 1x vacuum grid plate with 12.5 mm pattern, incl. integrated Venturi nozzle
- Height-adjustable stop discs
- 4x clamping claws with slot width = 14 mm
- 3 m plastic hose with hose connection and quick-action coupling
- 10 m vacuum sealing cord, Ø 4 mm black
- Incl. silencer and shut-off valve
- 1x hose connection for conventional vacuum pumps

Type	Dimensions L x W x H mm	art.no.	€

4182

Vacuum clamping system with adapter mats

- **For wet and dry machining, with vacuum pump, no Venturi nozzle**
- **For workpieces with openings**
  Construction with sealing cord, aluminium adapter plate and adapter mats
- **For workpieces without openings**
  Construction with sealing cord only, directly on the grid plate
- The modular construction allows multiple vacuum plates to be connected with overlapping grids. The operating vacuum is supplied to the individual plates via the connection elements.
- **Each set comprises:**
  1x modular grid plate with 12.5 mm grid
  1x aluminium adapter plate with 12.5 mm grid
  Set VM1: 10 blue adapter mats
  Set VM2: 9 blue adapter mats, 1 black
  Set VM3: 8 blue adapter mats, 2 black
  4x clamping claws with slot width = 14 mm
  1x assembly tool for replacing blind plugs
  3 m vacuum hose with wire helix

Technology to get excited

The new ATORN zero-point clamping system fares well in any comparison

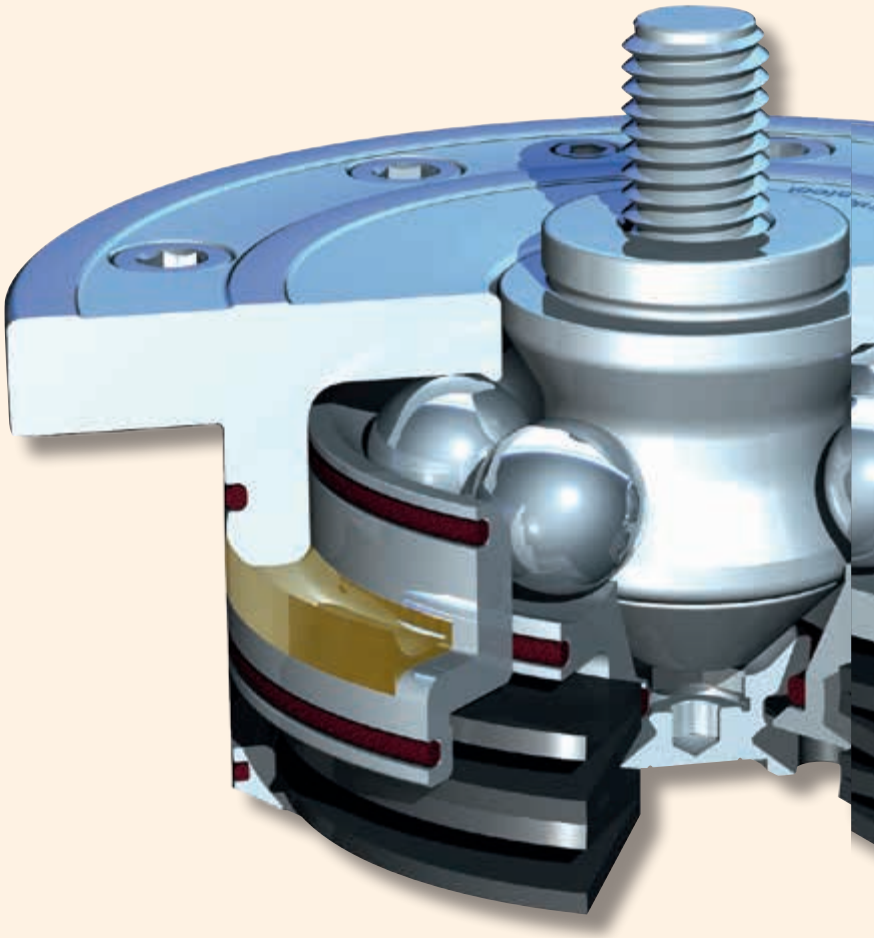
Experience the ATORN zero-point clamping system, which presents the advantages of its innovative and trend-setting characteristics in use.

Advantages that lift the ATORN zero-point clamping system well above the competition

- **Use of different clamping fittings for maximum positioning precision:**
  - Zero-point fitting: Positions at the absolute zero reference point
  - Strut fitting: Fixes the remaining free axis in place
  - Undersize fitting: Is used exclusively for clamping and restraint
- **Two ways of setting different zero points**
  - Classic: The zero point is defined via the zero point fitting in combination with the strut fitting
  - Based on temperature effects: The zero point is defined via the centre axis by solely using strut fittings
- **System requires no maintenance**
  - Completely sealed system made of stainless steel to eliminate the need to maintenance when working
- **Advantages in use**
  - Absolute simplicity in use thanks to the large catchment tolerance and the non-jamming feed-in facility
- **Process safety thanks to advanced technology**
  - The characteristics of the ‚three-cycle principle, form fit and a large ball diameter' further enhance the process safety. These characteristics optimally distribute the force, losing no effect in the process

Advantages in use

Large catchment tolerance



For the purpose of retracting a pallet into the clamping module, a pre-positioning of 6.5 mm or 12 mm is sufficient.

Non-jamming

Non-jamming extension and retraction thanks to the ideal form of the clamp fitting

Advantages in the technology

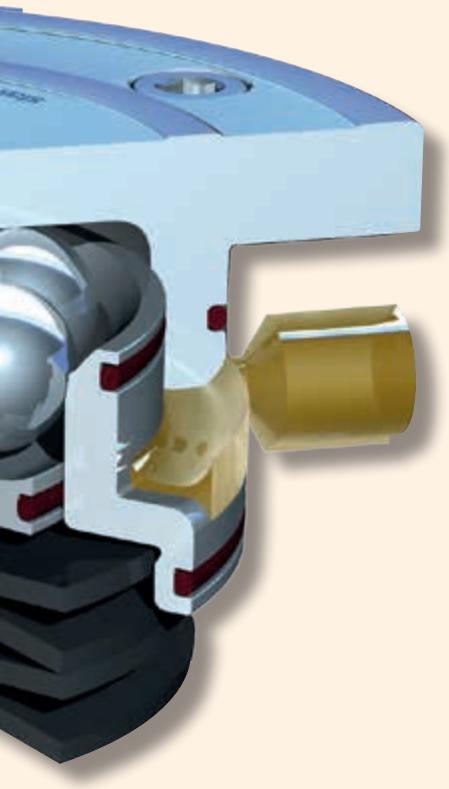
Large retention, catchment and sealing forces

Size	Retention force (kN)	FCatchment/sealing force (kN)
		hydr.
K 10.2	25	10
K 20	55	20

Three-cycle principle

Force is distributed by way of a three-cycle principle. This avoids exert shear loads on the balls.

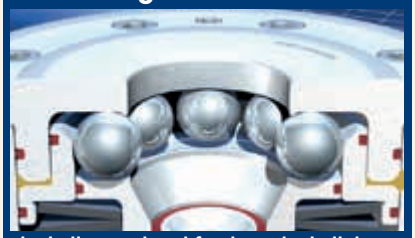
Form fit



The balls are encompassed from three sides in a form-fit fashion. The forces are exerted evenly over the balls and are optimally spread out.

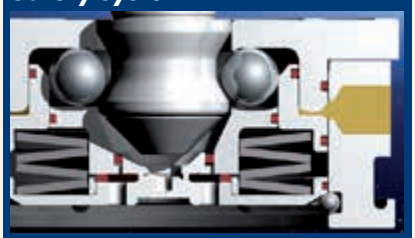
Large ball diameter

Better distribution of forces thanks to larger ball diameter.



Advantages in maintenance

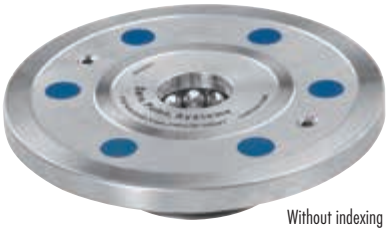
Rust-free – Robust – Suitable for industrial use



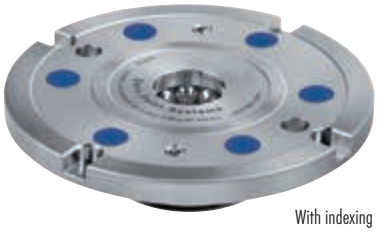
High-alloy, hardened tool steel. – This prevents corrosion. Robust, suitable for industrial use and with a long service life.

No ball cage

The balls are placed freely in the ball duct and continuously reposition themselves. As the balls are not in a cage, it is a quite simple process to blow out dirt using air.

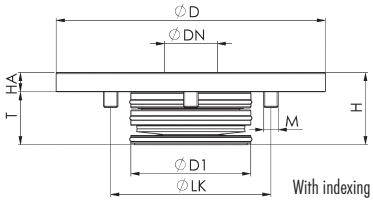


Safety system



The system is absolutely process-safe. The clamping module can be opened at any time.

ATORN® K10.2 and K20 installation clamping modules



- Hydraulic unlocking
- Hardened cover and piston
- Precision < 0.005 mm
- **Use:** Zero-point clamping system for optimised tooling times when clamping; for all areas of chip-forming and chip-free machining as well as the food, pharmaceutical and chemical industries.
- **Note:** Installation clamping modules boast high holding, pull-in and locking forces despite their extremely small dimensions. Hydraulic pressure is only required for releasing (min. 50 bar / max. 60 bar). The modules are mechanically locked when clamped. The advantage to this is the lack of inconvenient lines and of any risk of leaks.
- Available on request:
  - Installation drawings
  - Automation solutions
  - Also available as an individual flange version

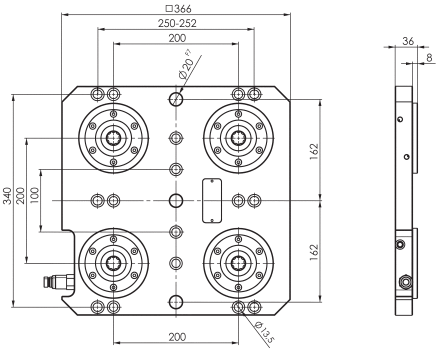
ATORN® K10.2 multi-clamping stations

- Hydraulic unlocking
- Precision < 0.005 mm
- Steel, unhardened
- The clamping systems are pre-equipped with attachment holes (for common table slot sizes 63, 100 and 125 mm) and positioning aids. The clamping stations are ready for immediate operation. Connections are pre-screwed.
- The clamping station with blow-out has 2 connections: 1 x hydr. opening, 1 x pneum. blow-out
- Installation drawings, further sizes and customised clamping stations for your machine are available on request.
- **Advantage:** Low overall height of just 36 mm



Double clamping station

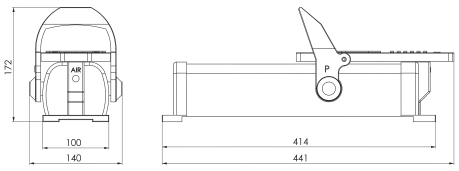
ATORN® Air hydraulic pump and connection set

- For opening hydraulic clamping modules or clamping stations.
- Compact, pneumatically operated hydraulic pump for single-acting circuits
- Integrated safety valve for regulating the hydraulic output pressure (factory-set to a maximum operating pressure of 60 bar)
- The expansion body in the oil tank enables the pump to be used horizontally and vertically.
- Connecting thread, air: G1/4
- Connecting thread, oil: G1/4
- **Note**: the pump is filled with a standard commercial hydraulic oil (HLP32) ready for use



1. Air intake,
2. Hydraulic outlet

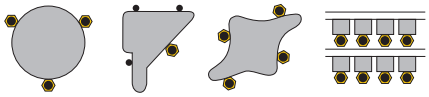
Eccentric clamps



- For fixture plates
- Eccentric head causes the clamping motion and clamping force (up to 27 kN)
- The hexagonal brass washer acts as a clamp
- Any workpiece shape can be clamped with positioning pins and one or two clamping screws
- Low height allows workpiece surfaces to be machined easily
- No need to consider the position of clamping claws in CNC programming
- Space-saving multi-clamping due to low height

It is easy and cost-effective to clamp parts of all shapes:

Eccentric clamping screws

- **For T-slots**
- Connecting the normal clamping elements to slot nuts using eccentric screws (with brass hexagonal washers or fastening discs) allows workpieces to be clamped cost-effectively on work tables or clamping plates with T-slots.
- A screw secures the T-slot nut in the T-slot
- Low height; surfaces of flat parts can also be machined
- Rapid adjustment to various workpiece sizes and parts of any shape, no rectangular lateral surfaces required
- Clamping force up to 27 kN
- Supplied with brass washer and slot nut

Pitbull anchor clamps

- Pull-down effect with clamping forces up to 50 kN
- Sharp-edged for raw parts (cast iron, forged, cut parts) or with a blunt edge to avoid clamping marks
- Space-saving
- Low height
- Compact design
- High clamping force
- Strong pull-down
- No protruding edges to interfere with tools
- Multi-sided machining
- Ideal for multi-clamping
- **Note:** Dimensions B and D are guideline values

Mini-Bulle flat clamp

- Hardened and tempered to a burnished shade
- h1 = at maximum T-slot depth in accordance with DIN 650
- To obtain low clamping heights with minimum slot depths, the clamp can be ground down by x mm
- Allows particularly flat workpieces to be clamped
- Clamping jaws have a wedge effect that ensures the workpiece is securely fixed to the work table
- Horizontal forces are absorbed by a screw corresponding to the slot size; this holds the clamp securely in position without damaging the table
- **Supplied in pairs**, boxed, complete with fastening screws (DIN 912, 8.8 / ISO 4762) and a hexagonal screwdriver (ISO 2936)
- Prices per pair

Side clamp

- M12 x 14, complete with slot nut
- Base body made from case-hardened steel, nitrided
- Tensioning hook made from case-hardened steel
- Tightening torque 75 Nm
- Attachment with screws, strength class 10.9
- Compact design
- Pull-down effect ensures that workpieces are securely and safely attached
- Increased plate tension for adding bores and slots
- Clamps plates laterally, allowing the full surface to be machined without any protruding contours
- Lateral thread allows a stop to be attached
- Can be used horizontally and vertically
- Reduced tooling costs
- Diverse and variable applications
- Can be used as a clamping element and as a fixed stop
- Moving the adjustment screw causes tensioning hooks to clamp the workpiece. At the same time, a pull-down effect is created on the supporting surface.
- Attaching a lateral stop enables the workpiece to be clamped repeatedly in the same position.

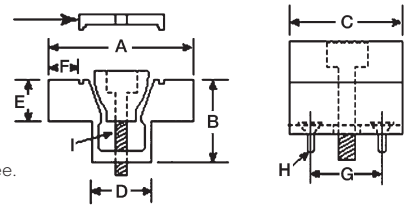
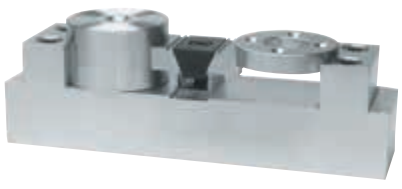
Base plate

- Precise side clamp movement by means of an alignment block on the work table
- Workpiece support increased by 30 mm
- Base body made from tempering steel, hardened and burnished
- Attachment with screws, strength class 10.9



Groove width mm	Thread	H mm	art.no.	€
14	M12	30 ± 0.1	**467042** 1214 4157	88,–



Form-fit double wedge clamp

- Extra wide jaws, can be milled to fit the shape of the workpiece
- For securely clamping difficult parts
- Clamps unstable parts without distortion
- Space-saving
- Allows two workpieces to be clamped simultaneously
- Higher productivity due to reduced auxiliary processing times
- Ideal for machining centres as well as milling and drilling machines
- **Note:** A locking plate is used during form milling to ensure that the jaws remain in a stable position and vibration-free.
- Supplied with wedge clamp and screw

Combination pull-down claw

- The pull-down effect ensures that the workpiece is secured to the support
- The front side is used for clamping, the rear side can be used as a stop
- Space-saving multi-clamping
- Clamping washer with toothed surface for raw parts and smooth surface for machined parts
- Preferably for mounting in a slot of width B (+0.05 mm)
- The engagement height of the clamping washer can be changed by the depth of the slot
- Body and clamping washer are case-hardened
- Supplied with fastening screws

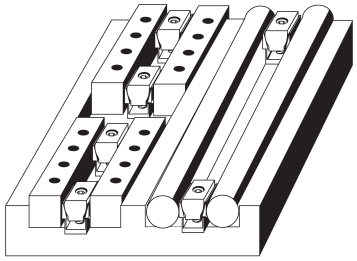
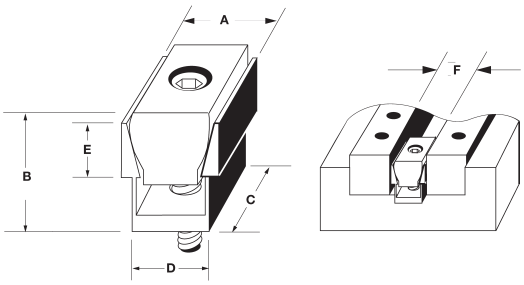
Clamping film

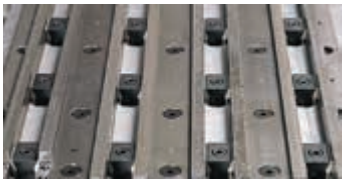
- For clamping workpieces that cannot otherwise be clamped due to their instability, shape or lack of magnetic properties
- The workpiece and film are heated to 85 - 95 °C (furnace, heating plate, hot air etc.)
- After cooling, the holding force is approx. 30 - 200 N/cm² depending on the type or supporting surface
- Allows machining on thin or difficult-to-clamp parts
- Can also be used to reinforce thin workpieces during machining
- Film can be used with steel, non-ferrous metals, glass, wood, most plastics and many other materials
- Contains no harmful chemicals



Description	art.no.	€
Clamping film, roll 250 mm x 7600 mm	**475100** 3076	220,–
Clamping film, roll 300 mm x 1500 mm	475100 3015	57,–



4156



Double wedge clamp

- One clamping element simultaneously clamps two workpieces
- Space-saving multi-clamping reduces auxiliary processing times and therefore unit costs
- Cost-effective clamping fixture
- For round and rectangular parts
- Clamping force up to 27 kN
- The use of a support and clamping bar further simplifies the process of constructing clamping fixtures

Correcting wedge HERKULES

- **Height wedge**
- Centring hole Ø 12 mm
- Ductile iron and steel hardened and tempered to a burnished shade, incl. ball attachment 466019 0001
- Correcting wedge can still be adjusted slightly at a load equal to one third of the maximum load capacity
- Precision-machined wedge surfaces enable smooth, sensitive adjustments (< 1/10 mm) using either a knurled-head screw or hexagonal screwdriver
- Double wedge effect, produces considerable lift and precise vertical movement without lateral displacement
- Height wedge tried and tested with heavy cast iron or forged parts on large machine tools

With stepped teeth

- Compatible with universal clamping supports 466047 0001-0002-0003
- The long version is designed for large spans due to wide slot spacing or greater workpiece clamping depths, e.g. on engraving machines.

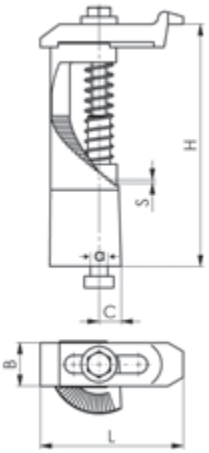
4157



Helical clamp

- Special cast iron
- Screw and threaded sleeve strength class 8.8
- Quick to use as a clamping unit
- Finely graded steps allow rapid adjustment for any workpiece height up to approx. 320 mm
- Requires little space on the work table thanks to the compact design

Clamping claw

- **Infinitely variable**
- Forged steel, hardened and tempered, galvanised
- Complete with DIN 787 T-slot screws, nuts and washers
- For quickly bridging various clamping heights with no additional supports
- Requires little space on the work table
- Designed for maximum loads
- Particularly suitable as a clamping device for cutting and stamping tools

Compact clamp

- Compact design
- Clamping force up to 16 kN
- Special polyamide seal protects the inside from dirt
- Ideal access when machining
- Clamps workpieces quickly
- Supplied without chuck key or clamping screw

Casing and lever arm made from tempering steel

Heavy-duty clamping jaws

- **Reversible clamping jaws**
- High design with precise V-shaped guide
- Base body: Malleable cast iron
- Clamping jaws: Case-hardened steel
- Reversible clamping jaws with smooth side for machined workpieces and grooved side for raw clamping surfaces
- Robust clamping jaws with large clamping surfaces, ideal for laterally clamping high workpieces
- We recommend using two clamping screws to secure the heavy-duty clamping jaws to the work table! DIN 787 T-slot screws must be ordered separately for use as fastening screws (two per clamping jaw), depending on the slot width.

Mandrels

- Almost every workpiece has at least one bore. These are suitable for clamping the workpiece (turning, milling, drilling part) to allow machining on the second side.
- 5-sided machining
- Space saving design for multi-clamping
- Mandrel can be easily turned and milled to the desired diameter
- Easy to use

For through-holes

- Fastening flange diameter is concentric to the clamping diameter
- Clamping screw, hardened and coated
- Supplied with 3 fastening screws (H)

Basic range

- All parts are made from tempering steel, T-slot screws hardened and tempered
- Rolled thread
- Ideal for tool making, production and use in training facilities

M12 x 14 set, slot width 14 mm

- Clamping force 20 kN
- Clamping heights 165 mm (2 clamping positions), 70 mm (4 clamping positions)

Description	art.no.	€
2 clamps with stepped teeth 14 x 100 2 clamps with stepped teeth 14 x 160 4 universal clamping supports Model 2 4 universal clamping supports Model 3 2 DIN 787 T-slot screws M12 x 50 4 DIN 787 T-slot screws M12 x 80 4 DIN 787 T-slot screws M12 x 125 2 DIN 6379 studs M12 x 100 6 DIN 6330 B hexagonal nuts M12 2 extension nuts M12 6 DIN 6340 washers M12	**466592** 1214	271,–

Screw paste

- Mineral grease-based
- Synergistic combination of highly effective white solid lubricants
- Heat-resistant and non-washable
  (Water resistance tested in accordance with DIN 51807, P.2; grease loss after 1 hr. at 37.8 °C = 1.4%)
- Particularly when aggressive cooling lubricants are used

Contents	Usable temperature range °C	art.no.	€
75 ml	-25 to +125	**466593** 0075	9,20

Hexagonal nuts

DIN 6330B | DIN 6334 | DIN 6331

1.5 x D high, DIN6330B

- Hardened and tempered, strength class 10
- With spherical end, can be used directly with DIN 6319D or G conical washers
- With flat end, can be used with DIN 6340 hardened washers

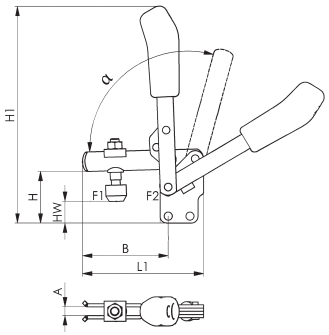
Vertical clamp

- Quick-action clamp with toggle mechanism
- Wide and quick clamp opening, complete workpiece exposure
- High final transmission with low force application, large clamping forces
- Self-locking mechanism prevents the clamp from opening due to machining forces
- **Use:** Drilling, welding, bending, grinding, testing and assembling
- Galvanised and passivated, case-hardened with greased bearing bushes
- Rivet made of stainless steel
- Complete with hardened, tempered and galvanised clamping screw
- Stainless steel version available on request



With open supporting arm and horizontal base

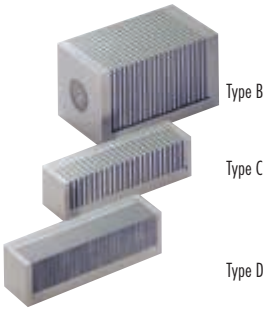
4191



Permanent magnetic clamping block

- **Not switchable**
- Clamping blocks A to C consist of a permanent magnet system with a narrow pole pitch that is effective on 2 to 3 surfaces (polishing: 4 mm)
- For clamping extremely thin steel workpieces = version D with a fine pole pitch of 1.3 mm
- Unlimited magnet life under normal industrial production conditions
- Clamping blocks can be ground and honed to half their height without significantly impairing the holding power

UniPower electrical permanent magnet clamping plate

All the advantages of QX technology are now also available in the new HE "High Efficiency" design – with a more efficient pole design to focus the maximum magnetic flow towards the workpiece, regardless of position.

- Reduced height and weight of the magnetic clamping plate
- Full clamping force from 17 mm tool thickness
- Reliable quick coupling
- Maximum flexibility of use
- Optimised contact face
- Absolute reliability
- **Supplied with control unit**

Model QX...UP

- Force/pole without air gap 615 daN
- Up to 16 kg/cm² in active magnetic field
- Over 75 t/m² across contact area
- Minimum workpiece thickness for maximum magnetic short circuit: 17 mm

TECNOMAGNETE Permanent lifting magnet MaxX

- Extremely compact lifting magnets
- Lightweight and powerful
- Can lift 20 to 50 times its own weight
- The „neutral crown" prevents magnetic flux dispersion, guaranteeing optimum performance even with a large air gap
- Switchable via hand lever, **with safety lock**
- Loads are handled carefully and not damaged

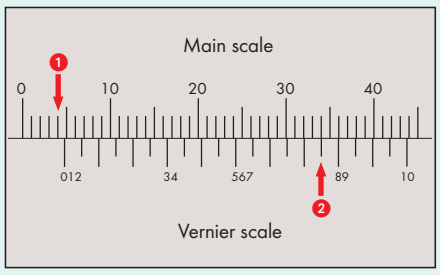
Performance demands quality

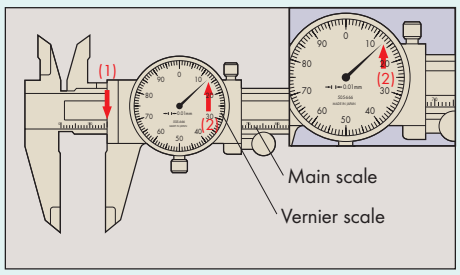
Analog Vernier calipers



Absolute Digimatic caliper

Reading off the scale

Vernier caliper



Graduation 0.05 mm

(1)	Reading off main scale	4 mm
(2)	Reading off Vernier scale	0.75 mm
	Reading	4.75 mm

Reading off the scale

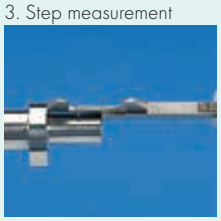
Dial calliper

Graduation 0.01 mm

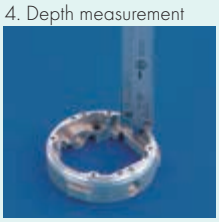
(1)	Reading off main scale	16 mm
(2)	Reading off Vernier scale	0.13 mm
	Reading	16.13 mm

Note: Above left, 0.75 mm (2) is read at the position at which a graduation stripe of the main scale is aligned with a graduation of the Vernier scale.

Application examples



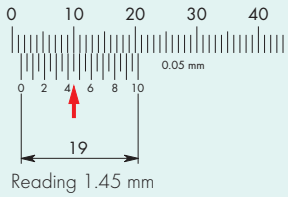
1. Outside measurement



2. Inside measurement

3. Step measurement

4. Depth measurement

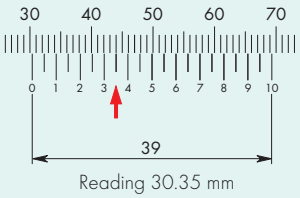


Types of Vernier scales

The Vernier scale is attached to the caliper's slider, and each graduation of the scale is 0.05 mm smaller than one main scale division of 1 mm. This means that as the calliper jaws are adjusted by 0.05 mm the subsequent Vernier scale line aligns with a main scale line and so indicates the number of 0.05 mm units to be counted (although for the sake of simplicity the scale is numbered in fractions of a mm).

Alternatively, one can choose a Vernier graduation 0.05 mm shorter than two graduations of the main scale, to obtain a long Vernier scale. The scale is thus easier to read, while the principle of measurement, and the graduation, remain unchanged.

Standard Vernier scale

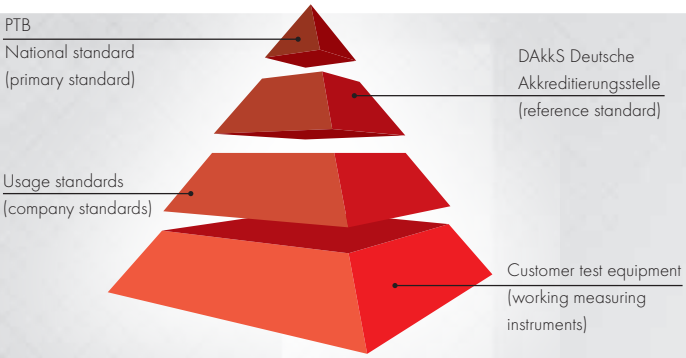


Graduation 0.05 mm

Reading 1.45 mm

Long Vernier scale

Graduation 0.05 mm



Reading 30.35 mm

Test equipment monitoring service

ISO 9000 ff

- DAkkS calibration laboratory according to DIN EN ISO/IEC 17025:2005
- Advice on setting up monitoring and management processes for your test equipment
- Short-term calibration of both new test equipment and test equipment which is already in use
- Modular software for monitoring and managing test equipment with target data generation
- Full service: management and calibration of your entire fleet of test equipment with data transfer
- Calibrated test equipment available from stock in the short term
- As calibrations are considered to be services, the calibration prices are to be understood as strictly net and are to be added to the tool's respective net sales price.

Mitutoyo Digital sliding calliper ABSOLUTE! AOS!

DIN 862 | Ø 1,9 mm | INOX | 0,01 mm | ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

- Particularly suitable for use in rough work conditions due to the electromagnetic inductive **AOS** measuring process (**A**dvanced **O**nsite **S**ensor), which is not sensitive to dirt or moisture on the scale
- **"ABSOLUTE" scale** for one-time zeroing
- **Digit height 9 mm (11 mm for MB 300 mm)**
- Battery life approx. 18,000 hours
- **Functions:** ON/OFF, zero point at battery change (ORIGIN), user-defined zeroing (ZERO/ABS), battery check
- Supplied with SR44 battery (No. 500534 0001) and factory certificate
- **Special accessories:** Digimatic cable Type C, No. 563100 0021 (1 m), No. 563100 0022 (2 m), USB cable Type C-USB, No. 563110 0003

HELIOS·PREISSER Workshop calliper with long measuring jaws

Werks-norm | INOX

- For measuring large workpieces and workpiece diameters
- High-precision laser scale
- Vernier scale 0.05 mm, matt chrome-plated
- Offset jaw ends for internal measurements
- Locking screw on top
- Fine adjustment

Rounded measuring areas for internal measurement

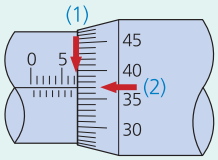
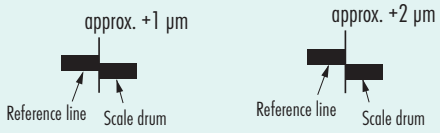
Analog outside micrometer



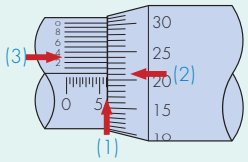
Digimatic outside micrometer



Reading off the scale

Outside micrometer with scale division 0.01 mm

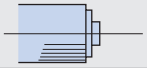
(1) Reading off the scale sleeve 7.00 mm
(2) Reading off the scale drum + 0.37 mm
Total reading 7.37 mm

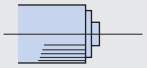


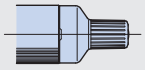
Note: 0.37 mm (2) is read on the position at which the reference line of the sleeve is aligned with the scale divisions of the drum.

The graduation of the drum can be read directly at intervals of 0.01 mm, as listed above. However, it can also be estimated at intervals of 0.001 mm, if the lines lie closely above each other, as the thickness of the lines is one-fifth of the distance between the said lines.

Outside micrometer with Vernier scale (scale division of 0.001 mm)

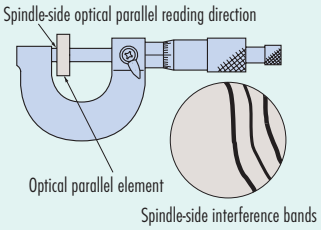






The Vernier scale lying above the reference line of the sleeve allows a direct reading in values to 0.001 mm.

(1) Reading off the scale sleeve 6.000 mm
(2) Reading off the scale drum 0.210 mm
(3) Read off the markings of the Vernier scale and the graduation lines of the drum + 0.003 mm
Total reading 6.213 mm

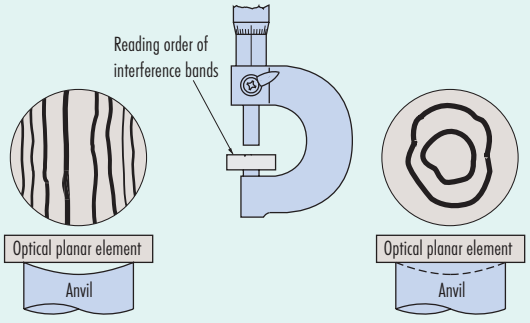


Note: 0.21 mm (2) is read off at the position at which the reference line lies between two graduation marks (21 and 22 in this case). The 0.003 mm reading (3) is taken at the position at which one of the Vernier graduation marks is in line with one of the drum graduations.

Measuring force limitation

	Audible	Single-handed operation	Note!
Ratchet stop 	yes	unsuitable	audible clicking causes micro-vibrations
Friction thimble (F type) 	no	suitable	noiseless and vibration-free operation due to friction clutch
Ratchet barrel (T type) 	yes	suitable	the constant measuring force is achieved through the acoustic feedback of the ratchet function.
Ratchet barrel 	yes	suitable	The constant measuring force is achieved through the acoustic feedback of the ratchet function.

The parallelism check of the measuring faces



The parallelism can be checked with a plane-parallel test glass held between the measuring faces. First, the test tube is attached to the measuring face of the anvil. The test tube is then clamped by closing the spindle with normal measuring force and the number of red interference rings or stripes that are visible under white light on the measuring face of the spindle are counted. Each interference ring/stripe is equivalent to a half-wavelength difference (0.32 µm for red stripes). In the above picture a parallelism of approximately 1µm is achieved, from 0.32 µm x 3 = 0.96 µm.

Flatness check of the measuring faces

The flatness can be estimated by holding an optical flat against the measuring face. A visible number of red interference rings or stripes can then be counted on the measuring face under white light. Each interference ring/stripe represents a half-wavelength difference in height (0.32 µm).

The measuring face is curved by about 1.3 µm. (0.32 µm x 4 paired red stripes.)

The measuring face is deeply concave (or convex) by about 0.6 µm. (0.32 µm x 2 continuous stripes)

SARA® Outside micrometer

- Precision design with ratchet
- Frame with hand protection
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø: 17 mm

Mitutoyo Outside micrometer designed for workshop use

- Lightweight workshop version with ratchet
- Painted steel frame (with bores to reduce weight for larger measurement ranges)
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø up to 300 mm = 18 mm, above 300 mm = 21 mm
- Spindle Ø up to 300 mm = 6.35 mm, above 300 mm = 8 mm
- Calibration includes setting gauges
- Supplied with adjustment key, versions with measurement ranges over 25 mm include setting gauge and versions up to 50 mm include factory certificate

With factory certificate for measurement ranges up to 50 mm!

Staub- und Wasserdicht IP65
TÜVRheinland ZERTIFIZIERT
www.tuv.com ID 4011207400

- Precision design with ratchet
- Shock-proof design
- Robust frame made from special cast iron, painted, with hand protection
- Spindle fixed by means of a lever button
- Matt chrome-plated scale sleeve and scale barrel
- Readings via large LCD display with 7.5 mm high digits
- Automatic switch-off if left idle
- "Function Lock" for saving original values up to a measurement range of 100 mm
- Scale barrel Ø 18 mm
- Spindle Ø 6.35 mm
- Calibration includes setting gauge
- Accuracy exceeds DIN 863 requirements
- **Functions:** Initial value (ORIGIN), zeroing/absolute (ZERO/ABS), hold value (HOLD), automatic switch-off, battery check
- Supplied with adjustment key and SR44 battery, no. 500534 0001; versions with measurement ranges over 25 mm include setting gauge and versions up to 50 mm include factory certificate
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m); USB cable type B-USB, no. 563110 0002

With factory certificate for measurement ranges up to 50 mm!

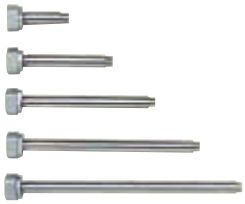
Mitutoyo Outside micrometer with replaceable anvil



DIN 863/3 | 0,5 mm | 0,01 mm

- **Form D16**
- The replaceable measuring anvils permit a variable measurement range. Adjustments are performed using the setting gauge provided.
- Painted steel frame with bores to reduce weight
- Spindle fixed by means of a locking lever
- Reading parts matt chrome-plated
- Scale barrel Ø: up to 300 mm = 18 mm, above 300 mm = 21 mm
- Spindle Ø up to 300 mm = 6.35 mm, above 300 mm = 8 mm
- Error margin: up to 500 mm = DIN, from 500 mm = ± (4 + L/75) µm
- Measuring faces: Carbide-tipped spindle
- Inserts: special steel, hardened
- Calibration including setting gauges
- Supplied with adjustment key, replaceable inserts and setting gauges

Mitutoyo Adjustable gap gauge

- Quick and reliable measurement of outside diameters up to 300 mm
- Check gauge adjusted with the aid of a corresponding gauge block
- Sturdy cast iron frame with Ø 8 mm collet for attaching a dial indicator
- Finely lapped carbide measuring faces
- Frame with insulation protection
- Lower measuring surface can be adjusted by 25 mm and is fixed by a locking ring
- Adjustable depth stop
- Measuring force 15 ± 3 N
- Measuring face parallelism: 0.005 mm
- Calibration plus testing costs for the indicating measuring instrument
- Supplied without dial indicator in moulded packaging

Application example with digital dial indicator and holder

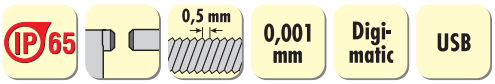
Mitutoyo Digital built-in micrometer



- Specially for use with coordinate measuring tables on measuring microscopes and measuring projectors
- Display component can be rotated through 330°
- Extremely easy to read with 7.5 mm high digits
- Automatic switch-off after 20 minutes
- Display and control buttons made from oil-resistant materials
- Straight clamping shank, Ø 18 mm
- Ø 49 mm adjustment barrel with crank for quick adjustment
- Spindle hardened and ground
- **Functions:** ON/ZERO/ABS, reverse counting direction, PRESET
- Supplied in moulded packaging with two SR44 batteries, no. 500534 0001
- **Optional accessories:** Digimatic cable type C, no. 563100 0021 (1 m), no. 563100 0022 (2 m), USB cable type C-USB, no. 563110 0003

Mitutoyo Inside micrometer set

DIN 863/4 | 0,5 mm | 0,01 mm

- Modular design
- Screwing on the graduated extensions makes it possible to measure all dimensions within the specified ranges
- Calibration includes extensions
- Supplied with adjustment key

506701 0300

Hardened measuring faces

- Extensions with ground internal rod serving as the material measure
- Micrometer measurement range 13 mm
- Micrometer fixed by means of clamping screws
- Reading parts chrome-plated
- Scale barrel Ø: 15 mm
- Tubular Ø of extensions: 12.5 mm
- Error margin: (3+V+L/50) µm, L in mm, V = number of extensions

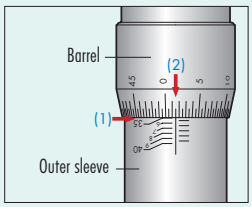
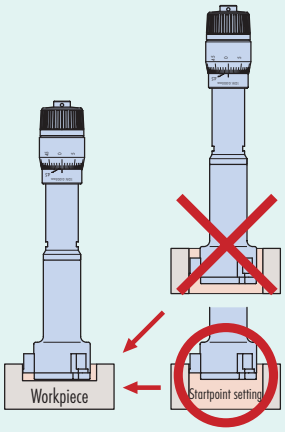
Inside micrometers



INFO

Reading off the scale

Scale division 0.005 mm



(1) external sleeve	35.000 mm
(2) barrel	0.015 mm
Reading	35.015 mm

Changing the measured values through a different measuring position

When using the Holtest Series, the measurement values when measuring with fully adjacent measuring faces and when measuring just with the points of the measuring face vary, due to the mechanical properties of the micrometer. Before measuring, set the reference value under the same conditions.

If only the points of the measuring faces are used for the measurement, then adjust the reference value correspondingly. The set-up must be as careful as the measurement!

Alignment error

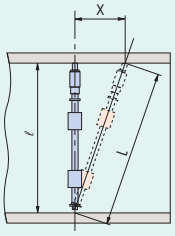


Fig. 1
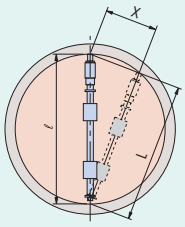
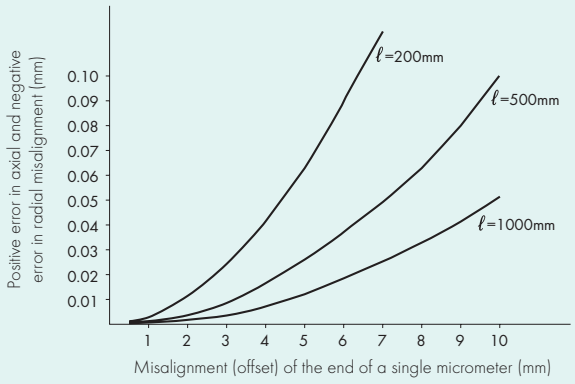
ℓ: The inner diameter to be measured
L: Length measured with axial offset X
X: Offset in axial direction
Δ: ℓ Error in measurement
Δℓ: $L-\ell=\sqrt{\ell^2+X^2}-\ell$





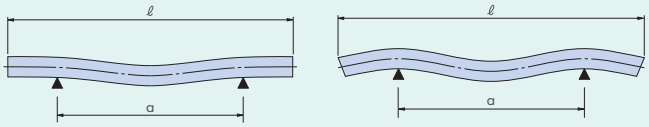


Fig. 2
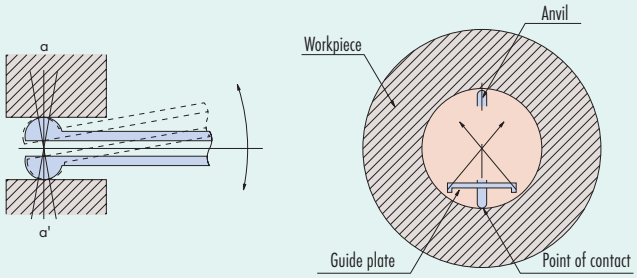
ℓ: The inner diameter to be measured
L: Length measured with radial offset X
X: Offset in radial direction
Δℓ: Error in measurement
Δℓ: $L-\ell=\sqrt{\ell^2-X^2}-\ell$

When carrying out a measurement with the inside micrometer in an axial or radial direction, attention must be paid to the correct orientation of the inside micrometer. Misalignment during the measurement leads to the offset X (Figure 1 and Figure 2), and thus to an incorrect measurement. An axial offset X suggests a larger and a radial offset X a smaller than expected measurement.

Airy points and Bessel points

When a normal or an inside micrometer is positioned horizontally, supported at two points, it undergoes some bowing under load due to its own weight; the shape of this deformation depends on the distance between the support points. As the following figure shows, there are two distances between the supporting positions, which control this deformation in useful ways.



The ends of a standard (or inside) micrometer can be positioned precisely horizontally by spacing the two support positions symmetrically (see above figure).These points are referred to as 'Airy points' and are often used to ensure that the ends of a length-measuring instrument are parallel to each other, allowing the length to be determined accurately. The change in length of a standard (or inside) micrometer due to bowing under load can be reduced to a minimum by spacing the two positions of the supports symmetrically (see above figure). These points are called Bessel points and may be useful when using long inside micrometers.

Measurement errors due to temperature fluctuations of the inside micrometer

The heat transfer from the operator to the inside micrometer should be minimised to avoid significant measurement errors due to the temperature difference between the workpiece and the bore gauge. If the bore gauge is held directly in the hand, gloves should be worn or it should be gripped via a heat insulator (if available).

Inside measuring instruments

Mitutoyo internal measuring instruments for small holes have contact elements with a large curvature, allowing these to be easily positioned when measuring the diameter of the actual hole (in the direction a-a). The true diameter is the minimum value displayed on the dial indicator, while the internal measuring instrument is moved back and forth as shown by the arrow.

The spring-loaded centring bridge on a Mitutoyo two-point inside measuring device allows an automatic radial alignment, thus requiring only an axial rocking movement to find the minimum reading (true diameter).

SARA® Inside micrometers with three-point contacts

DIN 863/4 | 0,5 mm

- For measuring through-holes and blind holes
- Large measurement depths due to extension
- Reading and operating parts matt chrome-plated
- Measuring spindle fully hardened and ground
- Ratchet coupling for repeatable measuring force
- Self-centring measuring head with three laterally extending measuring probes
- Carbide-tipped from a measurement range of 12 mm
- Clearance a for 6 – 12 mm = 1.4 mm, 12 – 100 mm = 0.5 mm
- Scale division up to size 0012 = 0.001 mm, from size 0016 = 0.005 mm
- Calibration including ring gauges, reduced testing
- Supplied in a sturdy transport case including ring gauge and extension

Note regarding Mitutoyo digital inside micrometers with three-point contacts

The hole diameter can be measured almost all the way to the base of the hole.

The following distances from the base of the hole cannot be measured:

Measuring range mm	Clearance a mm	
	508102....	**508104....**
6 - 12	-	2.0
12 - 20	2.6	0.3
20 - 100	3.4	0.3
100 - 300	19.6	12.4

Mitutoyo Digital inside micrometers with three-point contacts HOLTEST

IP65 | DIN 863/4 | 0,5 mm | 0,001 mm | Digi-matic | USB

Staub- und Wasserdicht IP65
TÜVRheinland ZERTIFIZIERT
www.tuv.com ID 0000021605

- With ratchet
- Readings via LCD display with 7.5 mm high digits
- Casing particularly resistant to oils and chemicals
- Activates automatically when spindle moves
- Measuring faces: up to size 0012, titanium-coated carbide; from size 0016, titanium-coated measuring pins made from hardened steel. Contact point and taper: Carbide
- **Functions:** Pre-set for two values (PRESET), zeroing/absolute (ZERO/ABS), hold value (HOLD), automatic switch-off, battery check
- Supplied in a case with SR44 battery (no. 500534 0001), key and factory certificate
- **Optional accessories:** Digimatic cable type B, no. 563100 0011 (1 m), no. 563100 0012 (2 m), USB cable type B-USB, no. 563110 0002; ring gauges, no. 540135....; extensions, no. 508701....

Mitutoyo Inside micrometers with three-point contacts BOREMATIC

0,001 mm | ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

- For fast and precise series measurements
- Base body with operating handle for quick adjustment
- Extremely easy to read with 11 mm high digits
- Display component can be rotated through 330°
- Allows two pre-set values to be input
- Measuring faces: up to size 0012, titanium-coated carbide; from size 0016, titanium-coated measuring pins made from hardened steel. Contact point and taper: Carbide
- Error margin: Measuring range 6 - 20 mm, Ø = 0.005 mm; measuring range 20 - 125 mm Ø = 0.006 mm
- **Functions:** MODE to switch between tolerance, factor and pre-set modes
  SET to confirm input
  DATA/ON/OFF
  Battery check
- Supplied with SR44 battery (no. 500534 0001), key and factory certificate
- **Optional accessories:** Digimatic cable type F, no. 563100 0051 (1 m), no. 563100 0052 (2 m); USB cable type F-USB, no. 563110 0006; ring gauge, no. 540135....; extensions, no. 508701....

Mitutoyo Internal precision instrument

Werks-norm

- Comparative measurement with reference to a pre-set reference dimension
- Set by means of outside micrometers, ring gauges or adjustable reference gauges with gauge blocks.
- With analogue dial indicator, can be replaced with a digital dial indicator (optional accessory)
- With movable stylus, carbide-tipped, measuring span 1.6 mm
- Replaceable carbide-tipped measuring bolts, sizes 0010 and 0018 hardened
- **Size 0150** with additional 50 mm extension for Ø range 100 - 150 mm
- Accuracy without an indicating measuring instrument
- Calibration includes dial indicator
- Supplied with base unit, set of measuring inserts with shims, analogue dial indicator with plastic protector

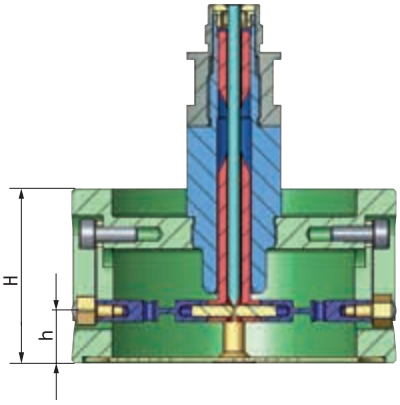
Bore gauge OD

- Robust and easy-to-use two-point comparative measuring instrument
- For series inspections of Ø 3.1 to 110mm bores
- High-precision measuring sleeve ensures optimum centring inside the bore
- Repeat precision 1µm
- Measuring span 0.2mm (Ø 3.1 to 6.0 = 0.15mm)
- Measuring force 1 - 2N
- Carbide measuring probes, other materials available on request
- Suitable for measuring with indicating callipers, dial indicators or electric probes
- Connecting thread holder/gauge M11 x 0.75
- * = nominal dimension range up to Ø 4mm H = 26mm, from Ø 4.01 up to 6mm H = 10mm
- **The following is required for a complete bore gauge OD: Bore gauge (526557.../526558...) + holder (526559...) + indicating measuring instrument + suitable ring gauge**
- Greater diameter, indicating measuring instrument and suitable ring gauges available on request
- Supplied without indicating measuring instrument and ring gauges



Standard bore gauge OD

- **Caution:** Please specify the nominal dimension and tolerance of the bore when placing your order!
  Examples: No. 526557 0006 / 4 +0.02 / -0.01
  No. 526557 0020 / 18H7

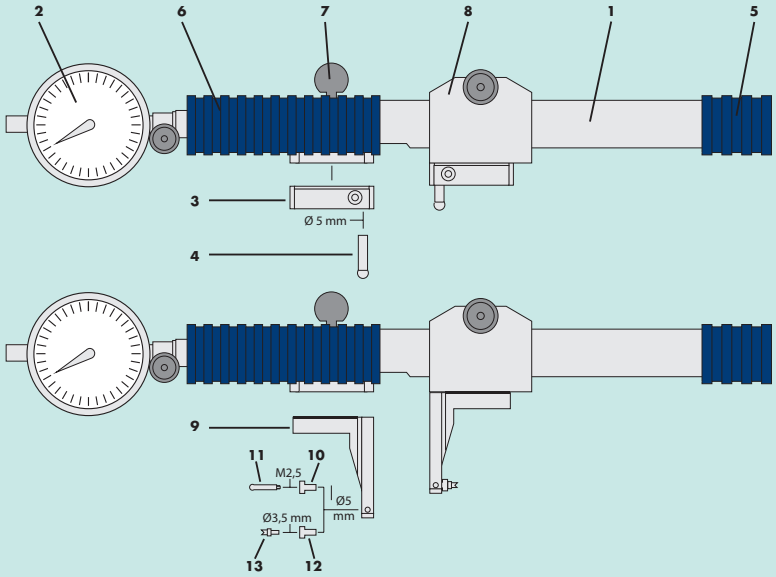
OD bore gauges, special design and accessories

You require

- **Bore gauges for through-holes**
- **Bore gauges in special forms**
- **Measuring probe jewelled or hard-chrome plated for surfaces sensitive to scratching**
- **Depth stoppers**
- **Angle pieces**
- **Measurement depth extensions**

Solutions not provided in our catalogue are also available on request. Please contact us, our technicians will be glad to advise you.

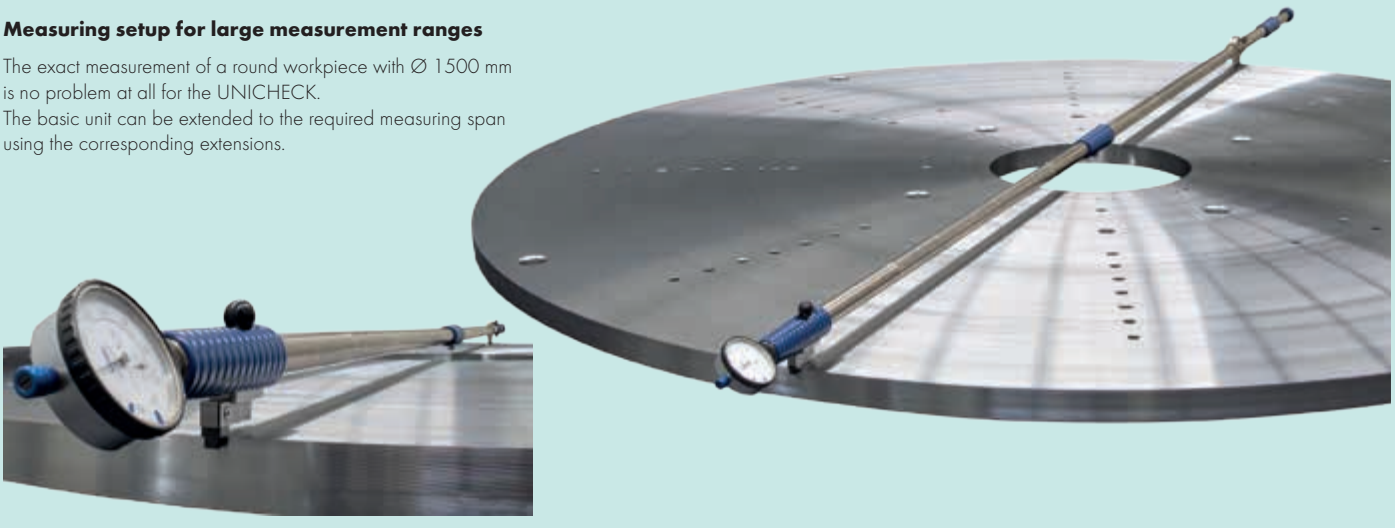
ATORN® Universal measuring instrument UNICHECK



INFO

The comparative measuring instrument UNICHECK, for external and internal measurements, is a versatile precision measuring instrument for efficient use in production and measuring rooms.
The wide range of measuring probes and measuring inserts gives the UNICHECK enormous versatility in the most diverse measurement tasks. The UNICHECK is used to both test workpieces and adjust machines.
Internal and external dimensions on shafts and parallel surfaces, recesses, grooves, dovetail guides and toothing are all tested. Internal and external threads can also be measured.
The measuring direction required for external or internal measuring can be quickly and easily adjusted at a touch.

Dial indicator, precision dial or electronic displacement transducer with a clamping shank Ø 8 h6 can be used to display measured values, where necessary and required.

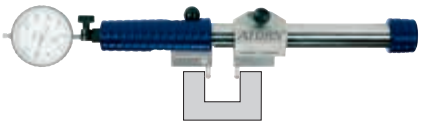


Device setup

1. Basic unit
2. Display unit (dial indicator, precision dial or electronic displacement transducer)
3. Measuring probe mount, locating bore Ø 5 mm
4. Measuring probe shank Ø 5 mm
5. Protective cap
6. Heat protection handle
7. Control lever
8. Slider with mount for fixed probe
9. Measuring arm for horizontal measurements, locating bore Ø 5 mm
10. Adapter Ø 5 mm, with connecting thread M2.5
11. Special-purpose contact point M2.5
12. Adapter Ø 5 mm, with locating bore Ø 3.5 mm
13. Thread measuring insert, shank Ø 3.5 mm

Measuring setup for large measurement ranges

The exact measurement of a round workpiece with Ø 1500 mm is no problem at all for the UNICHECK.
The basic unit can be extended to the required measuring span using the corresponding extensions.



The zero setting can be performed using a gauge block combination and a gauge block holder.

ATORN® Universal measuring instrument UNICHECK

- For carrying out a wide range of measuring tasks such as external and internal measurements, external and internal threads, external and internal toothing
- Adjustments are performed using an adjustment device, master, gauge block combination, ring gauge or outside micrometer
- Rugged tubular design
- Adjustable fixed measuring jaw
- Movable arm for internal and external measurements, reversible measuring direction, measuring range 15 mm
- Universal application by attaching a wide variety of measuring arms and probe tips (optional accessories)
- Measurement range extendable to 2000 mm using extensions (optional accessories)
- Choice of display via analogue or digital dial indicator (optional accessories)
- Supplied in a wooden case (without probe holding fixtures, probes or dial indicator)

Application example: with dial indicator, measuring probe holding fixture, ball tip measuring probe Ø 6 mm

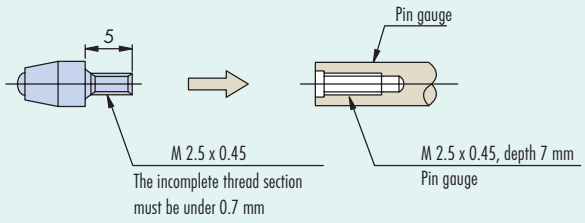
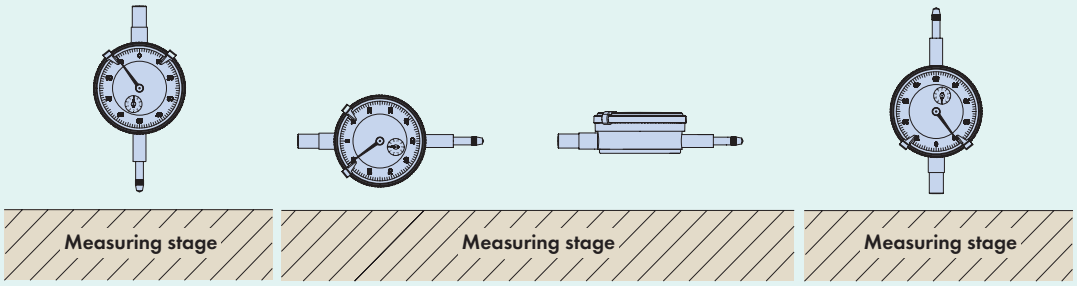
INFO





Assembly

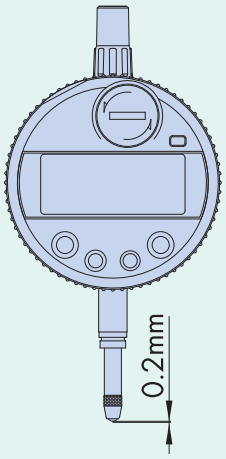
Stem Assembly	Method	Clamp the stem with a clamping screw 	Clamping the stem by split-clamp fastening 
	Note	• Mounting hole tolerance: Ø8G7 (+0.005 to 0.02) • Clamping screw M4 to M6 • Clamping position: 8 mm or more from the lower side of the stem • Maximum torque: 150N-cm when clamping with a single M5 screw • Note that excessive clamping torque may adversely affect the spindle movement.	• Mounting hole tolerance: Ø8G7 (+0.005 to 0.02)
Fixing with a mounting lug	Method		
	Note	• Depending on the application, the mounting lugs can be changed in orientation by 90 degrees. (Setting of lug on delivery: horizontal) • The mounting lugs of the models of series 1 (No. 1911, 1913-10&1003) cannot, however, be adjusted horizontally. • To prevent cosine-effect error, ensure that the measuring spindle is positioned at right angles to the surface to be measured (with the spindle itself in line with the measuring direction).	

Contact element

- Standardised screw thread M 2.5 x 0.45 (length: 5 mm).
- When producing a contact point, the incomplete thread section at the root of the screw must be less than 0.7 mm.

Contact point down (normal position)

Plunger horizontal (measuring direction lateral)



Contact point up (contrary to standard-measurement direction)

Effect of alignment on the measuring force

- In measurements with a horizontal or upwards measuring direction, the measuring force is low compared to the standard measuring direction (downwards). In these cases, the repeatability must be verified.

Setting the zero point on a digital dial indicator

The range of 0.2 mm at the end of the spindle stroke is not specified. Make sure that the spindle is raised by at least 0.2 mm when setting the zero point.

Caring for the spindle

- The spindle must not be lubricated. Otherwise dust may stick to it and cause errors.
- If the spindle is stiff, wipe it with a dry cloth or a cloth soaked in alcohol. If this leads to no improvement, consult Mitutoyo for repairs.
- Before you perform a measurement or calibration, ensure that the spindle can easily move up and down, and check the zero point for stability.

SARA® Dial indicator

DIN 878 | 0,01 mm

- Matt chrome-plated metal housing
- Rotatable outer ring for zeroing
- Two adjustable inner tolerance marks
- Probe tip thread: M2.5
- Clamping shank Ø: 8 mm

- Jewel bearing
- Rotatable outer ring for zeroing
- Ring fixed by means of a clamping screw
- Two adjustable tolerance marks
- Probe tip thread: M2.5
- Clamping shank Ø 8 mm
- **Shock proofing** (511025 0004 damped end point)
- Supplied in moulded packaging

ATORN® Indicating callipers

DIN 879-1

- Compact design
- Measuring bolts hardened and precision-guided
- Measuring mechanism with ruby bearing, shock-proof
- With adjustment button for fine adjustment across the entire measurement range
- Protective sleeve to prevent accidental fine adjustment changes
- Red adjustable tolerance marks
- Contact point thread M2.5
- Clamping shank Ø 8 mm
- Supplied in moulded packaging

ATORN® Digital dial indicator for run-out measurements

IP51 | Werks-norm | inch mm | ABSO-LUTE | RS232C | USB

- Inductive measuring system
- Aluminium casing with plastic front plate, Ø 60 mm, coolant-proof
- Easily readable LCD display with 11 mm high digits
- Front plate can be rotated through 270°
- Energy save mode and automatic reactivation
- Coloured LEDs for tolerance evaluation
- Max. / min. / max-min for run-out measurements
- 0.001 mm version, can be switched to 0.01 mm
- PROXIMITY data output
- Clamping shank Ø 8 mm
- Contact point thread M2.5
- **Functions:**
  mm/inch toggle option
  Preset (user-defined values)
  Reverse counting direction
  Switch between ref. 1 and ref. 2 (ABS/INC)
  Hold
- Supplied with CR2032 battery, no. 548079 6032
- **Optional accessories:** Data cable: PROXIMITY-USB, no. 500700 9966 or PROXIMITY-RS, no. 500700 9965

Mitutoyo IDC digital ABSOLUTE dial indicator for run-out measurements

Werks-norm | ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

- Dial indicator for run-out measurement; allows max., min. and difference values (TIR) to be retrieved
- ABSOLUTE scale
- Combined digital and analogue display
- Display component can be rotated through 330° for better readability
- Programmable Ax factor (x = spindle
- Adjustable resolution 0.01 mm / 0.001 mm
- 3 memory slots for pre-set and tolerance values
- Configurable via PC (special interface optional)
- Contact point M2.5,
- Clamping shank Ø 8 mm
- **Functions:** ON/OFF, MENU for switching between max. / min. / TIR modes, PRESET/SET for pre-setting values / inputting tolerances, START/ZERO/ABS for user-defined zeroing / incremental mode, view selection in tolerance mode, +/- to reverse measuring direction
- Supplied in moulded packaging with CR 2032 battery no. 548079 6032
- **Optional accessories:** Digimatic cable type F, no. 563100 0051 (1 m), no. 563100 0052 (2 m); USB cable type F-USB, no. 563110 0006

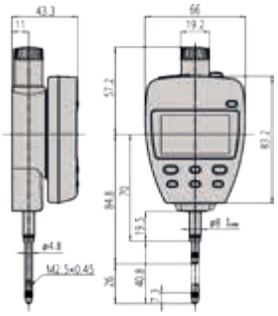
Mitutoyo Digital ABSOLUTE dial indicator IDF

Werks-norm | ABSO-LUTE | 230 V | Digi-matic | USB



- Power supply via mains adapter
- **ABSOLUTE scale**
- Backlit LCD display
- Combined digital and analogue display, which switches colour from green to red if the pre-set tolerance limits are exceeded
- Clamping shank Ø 8 mm
- Unrestricted travel speed
- Max., min. or difference values (TIR) can be selected for run-out measurements
- **Functions:** (ON/OFF) for power on/off; (MODE) for switching between: normal measurement, tolerance input, max. hold value, min. hold value, run-out measurement (max-min difference); (RANGE/Adj) for switching the analogue display range, centring the zero point of the analogue display pointer; (PRESET/SET) for determining the absolute starting point, pre-setting user-defined values, inputting tolerance values, confirming mode selection; (ZERO/ABS) for user-defined zeroing, switching between absolute/comparative measurement systems; (RES) for switching between 0.001 mm and 0.01 mm; (+/-) sign selection, function lock
- Supplied in moulded packaging, with mains adapter and lifting lever
- **Optional accessories:** Digimatic cable type D, no. 563100 0031 (1 m), no. 563100 0032 (2 m), USB cable type D-USB, no. 563110 0004

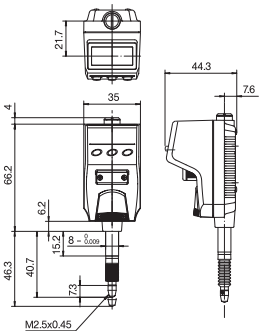
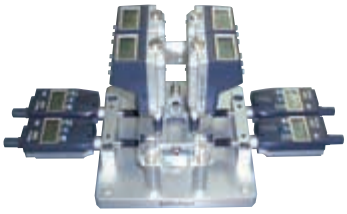
IP66 | Werks-norm | ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

TÜVRheinland ZERTIFIZIERT — Sicherheit Staub- und wassergeschützt — www.tuv.com ID 0000007162



- Small and slim digital dial indicators for installation in fixtures with limited space
- **ABSOLUTE scale**
- Battery life approx. 7,000 hours
- Unrestricted travel speed
- Easy to read thanks to large display
- Type B readings from above, Type N readings from the front
- **IP66 protection rating**, oil-resistant casing
- Small casing dimensions, w = 35 mm / h = 60 mm
- **Display can be flipped 180° depending on installation position**
- Dial indicators with 0.001 mm resolution, can be switched to 0.01 mm
- Can be controlled remotely via special cable (optional accessory)
- **Functions:** On/off/DATA for transmitting measurement values, SET for confirming inputs, MODE for selecting tolerances, zeroing, counting direction, display switching
- Supplied in moulded packaging with SR44 battery, no. 500534 0001
- **Optional accessories:** Digimatic cable type G, no. 563100 0061 (1 m), no. 563100 0062 (2 m); USB cable type G-USB, no. 563110 0007



Display can be rotated through 180°

Mitutoyo IDC digital ABSOLUTE dial indicator with calculation function

IP42 | Werks-norm | ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

- **ABSOLUTE scale**
- Suitable for use with chamfer gauges or measuring bridges for determining diameters
- Freely programmable calculation formula Ax + B + Cx-1
- Combined digital/analogue display
- Resolution can be selected in 12 steps, 0.0002 mm to 1 mm
- Display part can be rotated through 330° for better reading
- 3 memory slots for pre-set and tolerance values
- Configurable via PC (special interface optional)
- Clamping shank Ø 8 mm
- Probe tip thread M2.5
- **Functions:** Zeroing (ORIGIN), input tolerance values (TOL), input user-defined values (PRESET), confirm set formula, data transfer (DATA), hold value (HOLD), input calculation function (MODE), on/off
- Supplied in moulded packaging with battery CR 2032 No. 548079 6032
- **Special accessories:** Digimatic cable type F, No. 563100 0051 (1 m), No. 563100 0052 (2 m), USB cable type F-USB, no. 563110 0006

Kroeplin Längenmesstechnik Digital fast display callipers IP67

IP67 | Werks-norm | inch / mm | USB | Digi-matic

- Extra-small design, therefore very handy fast display calliper for indoor and outdoor measurements
- Adjustable increments: 0.001 / 0.002 / 0.005 / 0.01 mm
- Enhanced analogue display with a display area of 250°
- Li-ion battery with inductive charging, no battery replacement required
- Optional Bluetooth interface (up to 8 devices at once)
- Optional USB and Digimatic interface
- Memory can store up to 100 measurement values
- **Functions**: Control lever, measurement program selection, start menu and functions, data transfer, ON/OFF, 0-PRESET
- Supplied with charging cradle and Bluetooth dongle (Bluetooth interface adapter optional)
- **Special accessories**: Digimatic interface adapter No. 5240020006 plus Digimatic cable type E, No. 563100 0041 (1 m), No. 563100 0042 (2 m); USB cable type E-USB, No. 5631100005

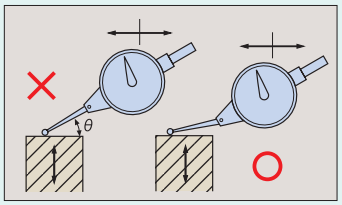
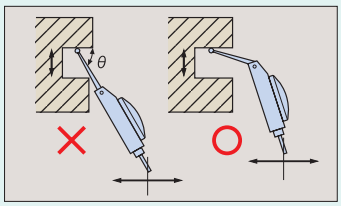
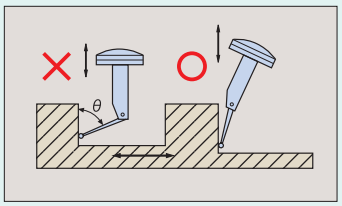
Lever dial indicators



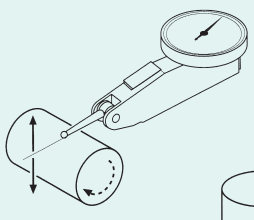
INFO



Angle error

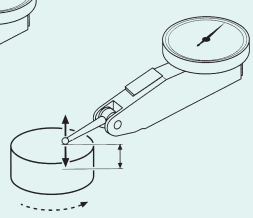


- Always minimise the angle between movement directions of the workpiece.
- The dial test indicator display value will differ from the true value if the workpiece and the direction of movement deviate by any angle. The measuring probe can be aligned through the pivot point of the measuring device such that the angle is minimised. θ If necessary, the display and thus the measured value can be corrected to the actual value of the angle θ by using the following table.
- Result of measurement = displayed value x correction factor



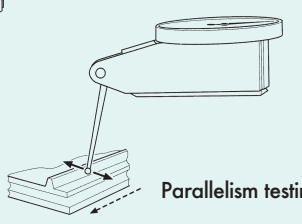
Correction for a non-zero angle

Angle	Correction value
10°	0.98
20°	0.94
30°	0.86
40°	0.76
50°	0.64
60°	0.50

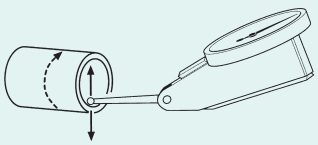


Examples
If the dial test indicator at various values of the angle shows = 0.200 mm, the measurement results are as follows:
For = 10°, 0.200mm × 0.98 = 0.196mm
For = 10°, 0.200 mm × 0.94 = 0.188 mm
For = 30°, 0.200mm × 0.86 = 0.172mm

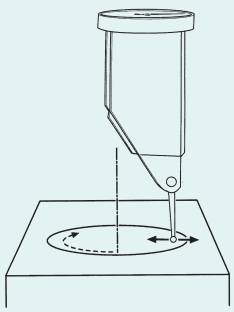
Note:
A special contact point of involute form can be used for automatic correction; this allows measurements without manual correction for any angle between 0° and 30°.



Lever dial indicator usage examples



Concentricity of a shaft



Alignment of a surface

Parallelism testing

Concentricity of a sleeve

Centring a drill hole

SARA® Dial test indicator

DIN 2270

- Ideal for measuring deviations in shape and position, true running and axial run-out as well as alignment work
- Matt chrome-plated metal casing
- Casing and dovetail mounting V-blocks made in one piece for exceptionally rigid clamping
- Supplied with Ø 6 and 8 mm clamping shank

The *multiCOM* System

- **The perfect interface between ATORN handheld measuring equipment and a PC**
- Three-fold compatibility: **RS 232 C** und **Digimatic** and **USB**
- For multiple measuring points, can be expanded to over 100 measuring instruments using low-cost USB hubs
- Data transfer can be triggered from the measuring instrument, via a USB foot switch or using the PC keyboard

- Measurement value transfer via USB data cable in conjunction with **USB-Com** software or the full version **USB-Com Professional**
- **USB-Com** for connecting **a** measuring instrument, include in the standard scope of supply of the USB data cable

ATORN® Signal cable multiCOM

- **For connecting ATORN measuring instruments with a multiCOM** interface to a PC or laptop
- USB cable including USB-COM driver software for transferring measurement values e.g. to Microsoft Excel

Advantage of the new Digimatic USB connectors:

Task	Required accessories	USB-ITPAK software	Data format
Read measurement values into any desired software that expects keyboard entry	One USB signal cable per measuring instrument	Software or special driver is not required	Measurement value as keyboard format (HID=Human Interface Device)
Measurement values in ordinary statistics software such as Mitutoyo MeasurLink	One USB signal cable and USB-ITPAK software per measuring instrument	For each cable (measuring instrument), generates a unique, fixed assigned COM port (VCP)	Mux-10 specification with fixed COM assignment
Read measurement values into any desired software that expects keyboard entry	One USB signal cable and USB-ITPAK software per measuring instrument, or an ordinary USB hub	Measuring instrument and foot switch are selected and assigned, stores a process as a sub-program	Transfer of a measurement value test in text format
Measurement values in Excel		Measuring instrument and foot switch are selected and assigned, assumes the entire organisation of an Excel table, meaning that transferred values are written to pre-defined target cells	Measurement log in Excel format with max. 31 characters

Mitutoyo Software USB-ITPAK

- **For managing multiple connected measuring equipment units and foot switches**
- For transferring measurement values in text format (when used as VCP)
- For easily creating logs in Excel
- Starts Excel automatically, offers the option to store accumulated measurement values in Excel
- Organises the Excel table in full with specified columns and rows, including the measurement task start and end
- Option to select the connected measuring instruments and foot switches
- Stores the individual parts of a measurement task as a repeatable program sequence
- Sequences can be repeated several times automatically
- Function keys F1 to F8 can be selected for assignment to data transfer, deletion or skipping
- Compatible with Windows 2000 / XP / Vista / Windows 7 / Windows 8 / Windows 10

Mitutoyo Wireless data transmission U-WAVE

- Quick and reliable method of data transfer without cumbersome signal cables
- Transmits in the 2.4 GHz frequency band with a choice of 15 channels
- Up to 100 transmitters can be connected via one receiver
- Range 20 m
- Receiver is connected and powered via USB
- Slim transmitter design
- Battery life approx. 400,000 data transmissions
- Correct data transfer confirmed on the transmitter by LED and buzzer or LED only (IP67 transmitter model)
- **Transmitter can be used universally by exchanging the connection cable**

Receiver

- Supplied with USB connection cable, driver software and operating manual

Mitutoyo Mini processor DP-1 VA

- Statistics calculator, printer and data logger in one device
- Documentation of measured values and statistical values by integrated printer
- All Mitutoyo Digimatic measuring instruments can be connected
- Integrated thermal printer, quick and quiet
- Stored data is documented with date and time information
- Logger function (data storage) 1000 measured values with date and time.
- Battery and mains operation
- Foot switch connection socket
- RS-232C interface for data output

Printable data and calculations

- Measurement values (max. 9999)
- OK/NOK values
- Data volume. max./min. values
- X-bar mean value
- Standard deviation s
- Clamping width r
- Rejects in number and per cent
- Process capability index cp and cpk
- Histogram
- X-bar and r control chart
- Control limits
- Date and time
- Basic unit supplied with printer, power adapter and operating manual, in moulded packaging

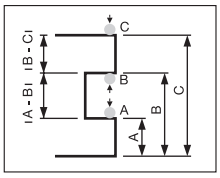
Mitutoyo Digital height meter QM-Height

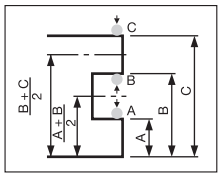
ABSO-LUTE | Digi-matic | USB

ABSOLUTE®

- Measuring heights, steps, groove widths, inner and outer diameters and their distances
- Designed for workshop use
- Available with or without air cushion support
- High accuracy due to electromagnetic inductive measurement principle
- Large LCD with large, easy-to-read digits
- Clearly laid out keypad with symbols for the individual measurement functions
- Multiple zero points programmable
- Optical and acoustic tolerance monitoring
- Choice of mains or (rechargeable) battery power supply
- Wide range of probes for various measurement tasks available as optional accessories



- **Technical data**
  Measuring span (stroke): 0 - 465 mm (350 mm) for QM-H350 and 0 - 715 mm (600 mm) for QM-H600
  Resolution: 0.001 mm, can be switched to 0.005 mm
  Display: LCD
  Error margin: ± (2.4 + 2.1L/600) µm L = measurement length in mm
  Surface repeatability: 1.8 µm (2 ó)
  Perpendicularity: 8 µm QM-H350 / 13 µm QM-H600
  Measurement system: electromagnetic inductive scale
  Measuring force: 1.5 +/- 0.5 N
  Weight: 22 kg QM-H350 and 27 kg QM-H600



- Supplied with measuring probe and Ø 5 mm carbide ball, reference block, 4x LR6 batteries (No. 548079 4006), protective cover, operating manual, factory certificate
- **Special accessories:** Digimatic cable Type D No. 563100 0031 (1 m), No. 563100 0032 (2 m) USB cable Type D-USB No. 563110 0004

Mitutoyo Linear height meter Linear Height LH 600E

- Measuring heights, steps, groove widths, inner and outer diameters, their distances and two-dimensional measurements such as reference circle calculation
- Robust and highly accurate height meter for workshop and laboratory use
- Accuracy of (1.1 + 0.6 L/600) µm, surface precision (2s) of 0.4 µm
- Increments adjustable from 0.0001 mm to 0.1 mm
- Pneumatic moving mechanism (floating/semi-floating)
- Direct interaction via the bright, easy-to-read **colour LCD display** (backlit)
- Single-key operation
- Large memory capacity for 50 measurement programs and 60,000 individual measurement records
- Independent adjustment options for travel and measuring speed, rapid positioning (up to 40 mm/s) and gentle contact
- Direct GO/NO-GO confirmation for each measurement
- Rechargeable batteries and an independent compressed air supply (integrated compressor) ensure operation as a stand-alone device
- Languages: German, English, French, Spanish, Italian and Japanese can be selected
- **Measurement functions:**
  1D and 2D measurements
  Height measurement (top/bottom surface)
  Diameter (bore/shaft)
  Calculating an angle
  2D: Element calculation, distance calculation, pitch circle calculation
- 2D coordinate system setup
  Polar coordinate system support
  Perpendicularity, straightness, incline and planarity detection
- **Probe insert:**
  Adjustment options for probe type
  Measurement and storage of probe ball diameter
  Alteration of probe position
- **Statistical processing:**
  Execution of simple statistical processes
  Histogram creation
- **Technical data:**
  Measurement range (travel) 0 - 972 mm (600 mm)
  Length measurement tolerance (1.1 + 0.6 L/600) µm,
  L = measurement length in mm
  Precision (2s): surface 0.4 µm; bore: 0.9 µm; perpendicularity 5 µm
  Straightness 4 µm
  Measuring force 1 N
  Interface: Digimatic input / RS-232 C output, facility to connect a USB data stick
  Power supply: AC adapter/rechargeable battery (Ni-MH), operating time approx. 5 hours
  Weight 24 kg
- **Supplied** in transport packaging with 1x Ø 5 mm ball probe, adjustment gauge, battery pack, mains adapter, factory certificate and operating manual

ATORN® IP67 digital sliding depth gauge

IP67 | DIN 862 | INOX | 0,01 mm | inch mm | KEEP-TRONIC | USB | RS232C | Digi-matic

- With and without measuring hook
- Precision-ground measuring faces
- **KEEPTRONIC** electronics store the zero point, operating keys lock to prevent accidental alteration of the zero point. Battery life approx. 3 years
- Inductive, waterproof FPS measuring system (Fluid Protected Measuring System)
- **multiCOM**data output, can be used as USB, Digimatic or RS-232
- **Functions:**
  0/ON/Off, mm/inch, PRESET for pre-setting user-defined values
- Supplied with CR 2032 battery, No. 548079 6032
- **Optional accessories:** Data cables, type P-RS 232 / P-Digimatic / P-USB, no. 512521....

ATORN® Tool pre-setting devices 350/420/600 with ImageController

- Robust tool pre-setting devices for workshop use
- Quick measuring, setting and testing tools
- SK50 high accuracy spindle with integrated calibration edge
- Pneumatic spindle clamping unit
- Simple setup of different zero points (max. 99)
- Different measuring programs e.g. to carry out concentricity and axial run-out measurements on the tool cutting edge
- CCD camera with telecentric lens
- Dynamic crosshair for automatic measurements
- EZmax software function for calculating and measuring the tool contour
- Supplied ex works, excluding packaging

Base support and reduction with integrated calibration edge

ImageController Basic

- 7" TFT colour screen with 12x enlargement and dial/push-button operation
- The simple software allows for fast training at minimal training expense
- ATORN 420 and 600 with gap gauge 100 mm

Gauge blocks

INFO

At operational level, gauge blocks are the most important tool for connecting to the metre unit of length. They embody a certain length with a very high level of accuracy, hence the term **material measure**.

Gauge blocks are offered in different tolerance classes (formerly known as **degrees of accuracy**), which differ as follows:

Tolerance class K used in our measuring laboratory for checking gauge blocks

Tolerance class 0 for all exact length measurements, for checking gauge blocks used in operation, for adjusting highly precise measuring instruments

Tolerance class 1 for checking gauges and adjusting measuring instruments

Tolerance class 2 as a working and setting gauge in production

Nominal dimension range in mm above	to	Tolerance class 0 Deviation from the nominal dimension in µm	Tolerance class 1 Deviation from the nominal dimension in µm	Tolerance class 2 Deviation from the nominal dimension in µm
-	10	0.12	0.20	0.45

	Ceramic (ZrO_2)	Steel (Fe)
Vickers hardness (HV)	1350	800
Longitudinal expansion coefficient (10^{-6}/K)	9.3 +/- 0.5	10.8 +/- 0.5

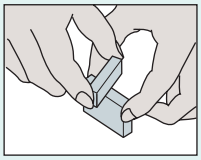
Advantages of ceramic gauge blocks

Corrosion-resistant — **Ceramic gauge blocks cannot corrode and consequently require no corrosion protection treatment**

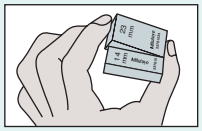
Non-magnetic — **No magnetic dirt, such as chips, will stick to ceramic**

Abrasion-resistant — **Mitutoyo ceramic gauge blocks have up to ten-times higher abrasion resistance than steel gauge blocks**

Dimensional accuracy — **Ceramic gauge blocks are wholly unaffected by time-related dimensional changes**

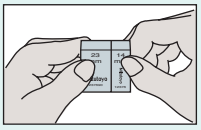


Expansion coefficient — **Similar to that of steel**



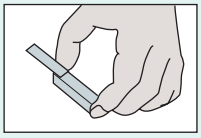
Perfect wringing of gauge blocks

- The wringing should always be performed in a clean place on a soft surface – if a gauge block falls from the hand, it will not be damaged.
- Wipe the preservation substance from the gauge blocks using a soft cloth and petroleum ether.
- Do not use alcohol or ordinary white gas for cleaning purposes for the cleaning; normal white gas for cleaning purposes contains too many impurities, while alcohol always contains aqueous components that can cause corrosion.
- Microfibre cloths are best suited for wiping off the gauge block.
- Check the cleaned gauge block for rust and cratches.
- Burrs on the measuring face are removed with a special Ceraston (ceramic deburring stone) for gauge blocks. Move the gauge block over the Ceraston using very light pressure.

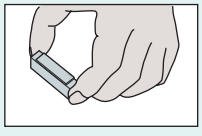


Wringing long gauge blocks

Cross the gauge blocks at about 90 ° to each other in the middle of the measuring faces.

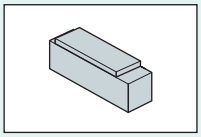


Pressing lightly, rotate the gauge block. You will develop a sense of the wringing while sliding the blocks.

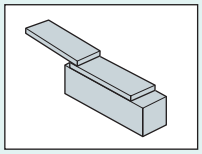


Align the measuring faces with each other.

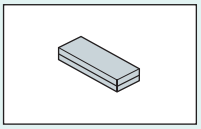
Wringing one thick and one thin gauge block



Overlap one side of a thin gauge block on one side of a thick gauge block.



While pressing the entire overlapped area, move the thinner gauge block to align the measuring faces with each other.



Wringing thin gauge blocks

To avoid bending the thin gauge, first wring the smaller gauge block onto the long gauge block.

Then slide the other thin gauge block onto the first thin gauge block.

Finally, remove the long gauge block from the stack.

SARA® Steel gauge block sets

DIN EN ISO 3650 | Werks-norm

- Made of carefully selected, high-quality, alloyed special steel, aged, hardened and hand-lapped
- Edges slightly blunted
- Each gauge block is engraved with an individual identification number
- Supplied in a wooden case with individually labelled compartments
- The accompanying factory test certificate lists all gauge blocks with their nominal dimensions and deviations from the nominal dimensions. It documents the test conditions and traceability to national standards.
- Calibration: Test B = 5-point measurement, Test C = 1-point measurement

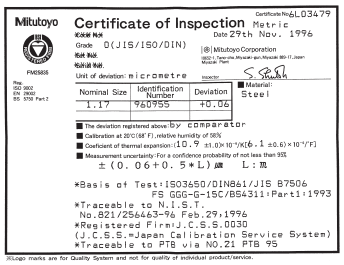
Mitutoyo SARA® Individual gauge blocks, steel and ceramic



DIN EN ISO 3650

- Cross-section of steel and ceramic individual gauge blocks: from 0.1 to 10.1 mm: 30 x 9 mm, above 10.1 to 1,000 mm: 35 x 9 mm
- Individual gauge blocks are available at a degree of accuracy of 0 and 1 for steel or 0 for ceramic
- **Each gauge block is engraved with an individual identification number**
- **Every Mitutoyo gauge block is supplied with a free MITUTOYO test certificate documenting the centre deviation and degree of accuracy, as well as traceability to the PTB standard**
- Mitutoyo gauge blocks: Supplied individually in moulded packaging with a MITUTOYO test certificate
- Calibration costs for all individual gauge blocks up to 100 mm:
  Test B: EUR 7.50 (5-point measurement)
  Test C: EUR 5.30 (1-point measurement)

Application example with gauge block connector

SARA Gauge block set for monitoring testing equipment

DIN EN ISO 3650

- Made from steel
- For monitoring test equipment
- **Tolerance class 1**
- Calibration: Test B = 5-point measurement, Test C = 1-point measurement

For testing outside micrometers of up to 100 mm

- Test equipment directive VDI/VDE/DGQ 2618, Part 10.1
- Steel gauge blocks for external measurements
- Supplied in a wooden case with individually labelled compartments

for measurement range mm	Individual dimensions	art.no.	€	Test B art.no.	€	Test C art.no.	€

535010 1010

For testing sliding callipers of up to 300 mm

- Test equipment directive VDI/VDE/DGQ 2618, Part 9.1
- Steel gauge blocks for external measurements
- Ring gauges for internal measurements
- Supplied in a wooden case with individually labelled compartments

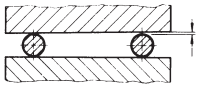
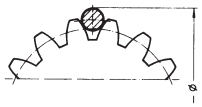
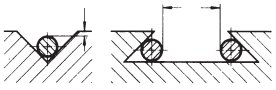
ATORN® Precision test pin sets



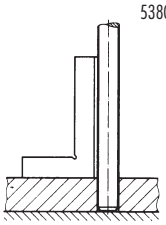
ähnl. DIN 2269



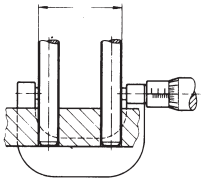
- For directly measuring bore tolerances, measuring distances between two bores, testing the eccentricity of bushes, testing angles and profiles
- Setting masters for length measurement devices, also for checking bore positions
- For parallelism tests, thread and toothing tests
- Gauge steel hardened to 58 - 62 HRC, single-aged, ground and lapped
- Ø tolerance:
Degree of accuracy 1 = ± 0.001 mm
Degree of accuracy 2 = ± 0.002 mm
- Total length: Ø 0.30 - 0.99 = 40 mm / Ø 1.00 - 20.0 = 70 mm
- From Ø 1.50 mm, marked with dimensions
- Wooden box with drilled and labelled inserts
- Other set configurations available on request



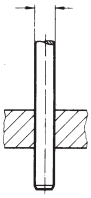
538005 0091



Are two levels parallel to one another?



Gear, thread, rack measurement



Angle and profile inspections

What is the position of the bore?

Monitoring the spacing tolerances of two bores

Direct measurement of bore tolerances

Accuracy 1

Precision test pins, individual

ähnl. DIN 2269

- Description and use as outlined above
- From Ø 0.30 to 0.99 mm without bevel
- From Ø 1.00 to 20.00 mm with single bevel
- Stainless steel test pin or magnetic test pin available on request

Please specify nominal Ø dimension in mm to four digits
Examples:
- Test pin, Ø 0.53 mm, accuracy 1 = order no. 538020 0053
- Test pin, Ø 16.78 mm, accuracy 2 = order no. 538025 1678

SARA® Limit plug gauges

DIN 7150/2 | DIN EN ISO 1938-1 | DIN 7164

540101 0020

- Go/no-go bore testing
- Tolerances and deviations in accordance with DIN EN ISO 1938-1 and DIN 7164
- Go ends for limit plug gauges are supplied with additional wear allowances in accordance with DIN EN ISO 1938-1
- Test pieces ground and lapped
- Up to Ø 70 mm = go/no-go ends on a single handle; 2-part version above Ø 70 mm
- Material: 540101.... to 540115....: Go/no-go made from wear-resistant gauge steel, hardened and aged 540120.....: Go end hard chrome-plated, no-go end gauge steel
- Intermediate dimensions, other tolerance classes, numerical tolerances, carbide limit plug gauges or flat limit hole gauges are available on request!

SARA® Limit plug gauge set

DIN 7150/2 | DIN 7164 | DIN EN ISO 1938-1

- Tolerance class H7
- 1 of each limit plug gauge: 3, 4, 5, 6, 8, 10, 12 mm

Description	art.no.	€	Calibration art.no.	€
Limit plug gauge set	**540101** 1000	134,–	075501 0101	69,65

5132

SARA® Limit gap gauge

DIN 7150/2 | DIN 7163 | DIN EN ISO 1938-1

- For go/no-go shaft testing
- **double-ended**
- Tolerances and deviations in accordance with DIN EN ISO 1938-1 and DIN 7163,
- Go ends of the limit gap gauges are manufactured with additional wear allowances in accordance with DIN EN ISO 1938-1
- Wear-resistant gauge steel, forged blank
- Aged and hardened, test faces ground and lapped
- **ISO tolerance class: h6**

540130 0022

- Intermediate dimensions, other tolerance classes – including numerical tolerances – and other versions, e.g. hard chrome-plated or carbide measuring faces and single-sided limit gap gauges, are available on request
- If required, all round-fit, taper and thread gauges can be supplied with a calibration certificate in accordance with VDI/VDE/DGQ 2618 guidelines

SARA® Morse taper gauges

DIN 229

- Testing of conical shanks and drill holes on tools and machine tools
- Wear-resistant gauge steel, aged and hardened
- Ground, with lapped taper surfaces
- 540501.... Taper plug gauge without tang DIN 229
  540505.... Taper sleeve gauge without tang DIN 229

- **The following plug gauges and gauge sleeves and/or ring gauges are available on request**:
  Taper gauges for steep-angle taper DIN 2079 and 2080
  Metric taper gauges according to DIN 234 and 235
  Drill chuck taper gauges according to DIN 2221 and 2222
  Serration gauges according to DIN 5481
  Gauges for splined shafts and splined profile hubs according to DIN 5462, 5463, 5464, 5465, 5471, 5472 and 5641
  Special-purpose gauges to your specifications

SARA® Thread plug gauges

DIN 13 | DIN ISO 1502

- For Go/No-Go inspection of nut threads
- The Go/No-Go side is made of wear-resistant gauge steel, aged, hardened and fine-ground
- Tolerances and dimensions in accordance with DIN ISO 1502
- Go ends for thread limit plug gauges are manufactured with additional wear allowances in accordance with DIN ISO 1502
- **Tolerance class 6H (* = tolerance class 5H)**

For right-hand ISO metric thread, DIN 13

SARA® Thread ring gauges

DIN 13 | DIN ISO 1502

- For testing bolt threads
- Wear-resistant gauge steel, aged and hardened
- Outer diameter milled
- Precision-ground thread
- Tolerances and dimensions in accordance with DIN ISO 1502
- **Tolerance class 6 g**
- **No-Go rings marked in red**
- Threaded gauges for other thread types e.g. trapezoid, pipe, BSF, UN, UNC, UNF, UNEF, NPTF, Pg, Edison screw thread and left-hand thread, as well as other dimensions and tolerance classes are available on request
- If required, all thread gauges can be supplied with a calibration certificate or DKD calibration certificate in accordance with the test equipment monitoring guidelines set out in VDI/VDE/DGQ 2618

541051 0240

541050 0240

JBO Thread gauges MultiCheck with depth measurement

DIN 13 | DIN ISO 1502

- Simultaneous testing of the thread gauge accuracy and the thread depth, time savings of up to 50%
- Direct reading of the thread depth using the scale on the sliding sleeve
- Thread depth measurements up to 4xD
- Go and no-go ends made of wear-resistant gauge steel, aged, hardened and precision-ground
- Tolerances and dimensions in accordance with DIN ISO 1502
- Easy replacement of test pieces by user
- Replacement test piece, test piece for thread types, thread gauges with reading 0.01, analogue or digital on request

ATORN® Thread gauges for metric thread, TiN

DIN 13 | TiN

- Wear-resistant steel, optionally TiN-coated, surface hardness approx. 2500 HV, meaning:
  Improved corrosion resistance
  Up to 10x greater wear resistance
  Extendable calibration intervals
- Precision-ground thread
- Tolerances and deviations in accordance with DIN ISO 1502

Thread limit plug gauges for right-hand ISO metric thread, DIN 13

- For Go/No-Go inspection of nut threads
- Go end coated
- Tolerance class 6H

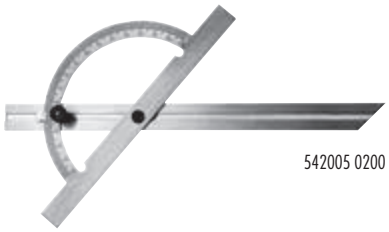
… with safety

ATORN®
High quality for great performance

SARA® Protractor

- Open graduated semicircle made of normal steel
- Scale 0 to 180°, reading 1°, locking screw
- Laser-etched scale, high-contrast, easy-readable, white millimetre division
- Hard-coded aluminium (HRC63)
- Non-scratch, black anodised surface



542002 0080

5139

Graduator, adjustable

- Open graduated semicircle made from normal steel
- Matt chrome-plated scale with an anti-glare finish
- Scale 10 to 170° with 1° readings
- Bar can be adjusted lengthwise using a locking screw, bar side bevelled 45°

SARA® Digital graduator

- Adjustment and zeroing possible on any level surface
- Measuring bar can be fixed in any position using the knurled-head screw
- Stainless steel, measuring edges precision-ground
- Measurement range: 180°
- Readings: 0.05°
- Accuracy: +/- 0.3°
- Functions: user-defined zeroing, hold value, rotate display for overhead measurement
- Supplied in a synthetic leather pouch with 1x CR2032 battery, no. 548079 6032

SARA® Digital universal goniometer

Werks-norm

- Digital display with simultaneous display of values in degrees, minutes and seconds, and decimal
- Automatic switch-off
- Simple adjustment using fixed reference points
- Fully movable and lockable measuring bar
- 150 and 300 mm rail length
- Fine adjustment for precisely calibrating angles
- **Functions:** ON/OFF, ZERO for user-defined zeroing, reverse counting direction
- Supplied with 2x rails, additional angle, 60 x 50 mm framing square and CR2032 batteries, no. 548079 6032

5139

Mitutoyo Universal goniometer DIGIMATIC

Werks-norm | Digi-matic | USB

- Digital display in degrees or minutes, zeroing in any position
- Hardened stainless steel measuring bar and measuring edges
- Automatic switch-off after 10 minutes of inactivity
- Simple adjustment using fixed reference points
- Fully movable and lockable measuring bar
- Fine adjustment for precisely calibrating angles
- Ability to pre-set angles
- Can be combined with height meters using the holder provided
- Battery life up to 2,000 hours
- **Functions:** ON/OFF, PRESET for pre-setting user-defined angles, DATA/HOLD, switch from decimal to degrees and minutes, ZERO for user-defined zeroing, reverse counting direction
- Supplied with height meter holder and CR2032 battery, no. 548079 6032
- **Optional accessories:** Digimatic cable type F, no. 563100 0051 (1 m), no. 563100 0052 (2 m); USB cable type F-USB, no. 563110 0006

ATORN® Measuring and inspection plates

Manufacturer's test certificate included

All prices are ex works and include packaging!

- **Accuracy in accordance with DIN 876/0**
- Completely non-warping, tension-free, non-corrosive and acid-resistant
- Non-magnetic and non-conductive, with no temperature sensitivity due to a low thermal expansion coefficient
- Hard and wear-resistant: Hardness grade 6 - 7 on the Mohs scale.
- Homogenous fine-pored material structure results in consistent hardness, which prolongs service life and maintains accuracy
- Maintenance-free; only dirt removal is required to prevent measurement accuracy from becoming impaired
- High contact area ratio due to diamond-lapped measuring faces
- All measuring and inspection plates are supplied with a manufacturer's test certificate
- DKD certificate available on request
- Prices ex works, including packaging

ATORN®
High quality for great performance

Concentricity gauge

HELIOS·PREISSER

- For testing the radial and axial run-out accuracy of rotating parts
- Size 0350 tailstocks with V-block attachments

Base plate design:
- Special cast iron
- Finely ground supporting surface
- With 2 T-slots, for holding tailstocks and measuring stand
- Slot width 10 mm (12 mm*)
- Distance between T-slots 58 mm (100 mm*)
- Planarity in accordance with DIN 876/2

Tailstock design:
- Adjustable
- Left-hand tailstock with fixed tip, right-hand tailstock with movable tip
- Quill Ø 16 mm (22 mm*)
- Movable tip travel approx. 10 mm
- Hardened steel quill and centre, precision-ground

Measuring stand design:
- With fine adjustment
- Locating bore 8H7
- Column Ø and height: 16 x 200 mm (22 x 240 mm*)
- Cross-arm Ø and length: 16 x 60 mm (16 x 125 mm*)
- Base plate supplied with tailstocks and measuring stand

Angle plate

- With clamping slots, precisely machined on both sides
- Angle precision in accordance with DIN 875 (clamping surface support)
- Made of high-density special casting with high wear-resistance, supporting surface and clamping surface machined at angles to one another, planed lateral faces, cast clamping slots,
- **Quality 3**: Bearing and clamping surface finish planed, planarity according to DIN 876/3
  Quality 1: Bearing and clamping surface ground, planarity according to DIN 876/2
  Quality 0: Supporting and clamping surface precision-ground, planarity in accordance with DIN 876/1

ATORN® Light metal spirit level

- **With and without magnet**
- Strong aluminium rectangular profile
- Non-slip contact due to silicon pads on rear
- Rubber end caps act as shock absorbers
- Laser-marked round horizontal vial
- Precision readings due to additional markers for the zero position and 2% gradients
- Magnifying effect for improved readability
- 270° vial viewing angle without protruding edges
- Vials made from high-strength, unbreakable polycarbonate
- Measurement accuracy in normal position: 0.5 mm/m
- 556508.... Lengths 800 to 1200 mm with additional scale on the upper measuring face and 2 adjustable measuring and scribing attachments
  556509.... with magnetic sole

SOLA ENW angle spirit level with digital display

- **With electronic inclinometer**
- Aluminium tube profile, gold anodised
- Profile cross-section 59 x 26 mm
- Vials made from unbreakable block acrylic glass, horizontal vial with magnifying lens and luminous backing
- Incline display in degrees and percent
- Inverted measurement possible
- Hold function
- Switchable acoustic function
- Automatic switch-off
- Measurement accuracy: 0.017° = 0.3 mm/m in normal position, 0.043° = 0.75 mm/m for inverted measurements, Solartronic module 0.05° at 0° and 90°, 0.2° between 1° and 89°
- **Functions:** ON/OFF, acoustics, zeroing, incline display ° / % / mm / m, HOLD/COPY
- Supplied with 6LR61 battery, no. 548079 4022

ATORN® Electronic inclinometer

- Made from thick-walled four-chamber hollow aluminium profile, cross-section 60 x 26 mm, with two milled measuring faces
- Impact-resistant protective ends
- Display can be switched between degrees, percent or millimetres/metre
- HOLD function (measurement value memory)
- Switchable acoustic signal for 0° or 90° position
- Easy to read thanks to high-contrast 16 mm high LCD display
- Arrows in the display indicate the direction in which the device should be moved to reach the 0° or 90° position
- Display flips automatically for overhead readings
- Error margins:
  at 0° to 90° = 0.05°
  at 1° to 89° = 0.2°
- Extremely easy horizontal and vertical adjustment using the integrated measurement computer
- Battery life approx. 300 hours
- Supplied in sturdy plastic tubing with 6LR61 battery, no. 548079 4022

TSCHORN 3D probe

IP67

- New and improved model
- Minimised guide play and more stable positioning
- Optimised button mechanism
- For determining the spindle centre when aligning workpieces on X, Y, and Z axes
- To protect the measuring unit, large over-travel allowances have been incorporated into the probe unit
- Probe insert with predetermined break point at the far top
- Probes can be replaced by the user
- Supplied with standard probe insert

Size comparison: standard probe / slim-line probe

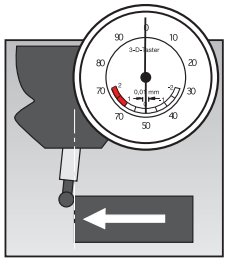
ATORN® Universal 3D probe

IP67



- For determining the spindle centre when aligning workpieces on X, Y, and Z axes
- Easily readable dial indicator
- True-running accuracy can be calibrated via 4 adjustment screws in the casing
- Robust metal casing
- No plus/minus sign problems, as actual value readings are independent of the direction
- Automatic probe radius compensation
- Ceramic predetermined break point prevents damage to the mechanism if maximum probe displacement is exceeded
- Probes can be replaced by the user
- For use on all machine tools including EDM equipment due to insulation between the probe insert and the holding fixture
- Dial indicator diameter: 57 mm
  Casing width: 65 mm
  Clamping shank: 20 mm Ø x 50 mm, similar to DIN 1835B or DIN 69871A, SK 40
  Probe ball diameter: 4 mm
- Supplied in moulded packaging, including operating manual

Move towards the workpiece edge

When contact is made with the edge, the display will change

If the small and large pointers are at "zero", the spindle axis and contact edge are exactly in line. The machine control system is zeroed.

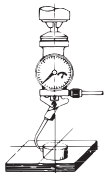
Precision centring device CO-AX



- For aligning workpieces on machine tools with vertically or horizontally rotating spindles
- Non-rotating, easily readable dial indicator
- Robust metal casing
- Wide display range
- Straight clamping shank Ø 10 mm
- With stanchion to hold the dial indicator in the desired position
- Replacement of the probe tips facilitates large working range inside and outside
- Dial indicator diameter Ø 40 mm with tolerance marks
- Functional range Ø 4-300 mm, inside and outside
- Optimum speed 150^{rpm}
- Supplied with stanchion 160 mm,
  3 inner probes (50/100/150 mm),
  3 outer probes (50/100/150 mm),
  Centre probe,
  Wooden storage boxes

HAIMER® Precision centring device Centro

- For aligning workpieces on machine tools with vertically or horizontally rotating spindles
- Non-rotating, easily readable dial indicator
- Robust metal casing
- Large display range
- Straight clamping shank, Ø 16 mm
- With stanchion to hold the dial indicator in the desired position
- Centring accuracy: 0.003 mm
  Casing Ø: 80 mm
  Clamping shank: Ø 16 mm x 48 mm
  Dial indicator Ø: 60 mm
  Length (without clamping shank): 92 mm
  Max. Speed: 150 rpm
  Bore measurement range: Ø 6 - 125 mm
  Shaft measurement range: Ø 0 - 125 mm with bent probe tip
- Base unit supplied with Ø 5 mm straight probe insert and telescopic rod featuring an articulated base, in moulded packaging

Curved probe insert (optional)

Probe insert, curved with ball, Ø 5 mm	558014 0003	31,–

5185

Zero adjuster, height 50 mm

- For setting machine reference points
- The adjustment device is placed on the workpiece and the tool (e.g. milling cutter) moved towards the spring-mounted contact surface until both pointers on the dial indicator are at zero. The lower edge of the tool is now positioned at exactly 50 mm ± 0.01 mm. The reference dimension of 50 mm is entered into the machine control system.
Caution: Process may only be performed while the tool is stationary.
- Base body and probe insert are case-hardened (60 HRC) and finely ground
- Two guide diameters for optimum handling of the contact surface
- 558020 0005: six magnets in the base, plane-ground
- Supplied in a wooden case with dial indicator, operating manual and measurement log

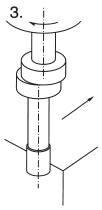
5162

Edge probe for rotary applications



- For determining tool reference faces and edges
- **Recommended speed: approx. 600 rpm**
- All parts hardened and burnished
- Ground clamping and contact diameters
- Surfaces between holding fixture and probe head lapped
- Probe head is connected to the clamping shank via an extension spring
- Alignment accuracy 0.01 mm
- Supplied in a case

Approach, probe does not rotate smoothly

Probe touches the workpiece and runs quietly

Probe moves sideways with a jerk = reference point

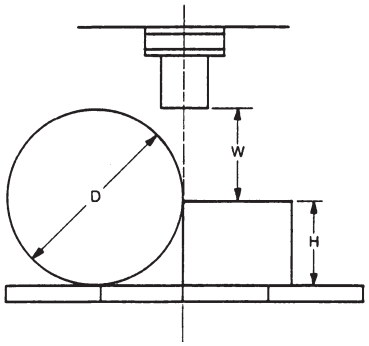
Mitutoyo Measuring projector PJ-A3000



QM-DATA can be connected

- Compact, easy-to-operate table projector for diverse inspection tasks
- Clear image across the entire screen Ø of 315 mm
- 360° rotatable screen with crosshairs
- 10x lens with separate semi-opaque incident mirror included
- Integrated condenser lenses for 10x, 20x, 50x and 100x magnifications
- Halogen backlighting and incident lighting
- Built-in digital display for reading the angle of the rotatable screen
  Switch between 1 arc minute or 0.01 degree, with 0.001 mm resolution for the X and Y axis
- RS-232 C interface for X and Y axes
- Magnification uncertainty: 0.1 % backlighting, 0.15 % incident light
- **562001 0105** with 150 x 50 mm coordinate measuring table, fine and quick adjustment across the entire movement range, integrated glass scales, max. workpiece weight: 10 kg
- **562001 0111** with 200 x 100 mm coordinate measuring table, fine and quick adjustment across the entire movement range, built-in glass scales. Supporting surface of the table can be swivelled ± 5° to provide better workpiece alignment, max. workpiece weight: 15 kg
- Supplied complete with a 230 V / 50 Hz power cable; covering hood; two 24 V / 150 W halogen bulbs; a spare 5 A fuse and operating manual; shipped in disposable packaging
- **Calibration on request**

Mitutoyo Measuring projector PV-5110

- Robust, easy-to-operate stand projector
- Clear image across the entire screen area, Ø 508 mm
- 360° rotatable screen, with crosshairs, locking, fine adjustment
- Built-in digital angle reading, can be switched from 1 arc minute to 0.01 degree
- Halogen backlighting and incident lighting
- 10x lens included
- 200 x 100 mm coordinate measuring table, fine adjustment across the entire movement range and quick adjustment along both axes, built-in glass scales, supporting surface of the table can be swivelled ± 5° for better workpiece alignment, max. workpiece weight: 5 kg
- Magnification uncertainty: 0.1 % backlighting, 0.15 % incident light
- Hand wheel on the side of the casing for adjusting the measuring table height to alter focus
- Supplied complete with two individually adjustable halogen incident lights; holding fixture for optional digital display unit; 230 V / 50 Hz power cable; 10x lens set; operating manual; shipped in disposable packaging
- **Calibration on request**

562501 0002

Mitutoyo QM-Data 200 measurement computer

- For connection to profile projectors and measuring microscopes
- Measuring complex geometric elements
- Robust design for workshop use
- Large, high-contrast **colour LCD display**
- Function keys for frequently measured elements e.g. point, line, circle, etc.
- Computerised workpiece alignment
- Teach-in process allows part programs to be created for frequently recurring parts
- Automatic element recognition via the Mitutoyo AI function (AI = artificial intelligence)
- Macro-functions and part program development provide a quick and user-friendly measuring procedure both for single and series measurements.
- Integrated USB interfaces and printer interface
- Weight: 2.9 kg
- **Measurement functions:**
  Point, line, circle, angle, ellipse, perpendicularity, parallelism, Cartesian/polar coordinate systems, min./max., shape, intersection points, incremental/absolute, statistical calculations, date/time

Mitutoyo Digital display unit LINEAR SCALE model KA200

- Compact design
- Easily readable 15 mm high LED digits
- For connecting model AT 103, AT 116, AT 112F and AT 715 scales on two or three axes
  For connection to turning and milling machines (adjustable mode)
- Adjustable resolution: 0.001 mm and 0.005 mm resolution (for AT1xx scales)
- Display: 8 digits, (-) sign, zero point
  Connection: 230 V / 50 Hz
  Power consumption: 30 VA
- Supplied with mains power cable and operating manual, shipped in disposable packaging

Mitutoyo Standard target

- For comparing screen displays on measuring projectors
- Standard targets are reference drawings on which specific geometric shapes, e.g. circles, are drawn as fixed dimensions for the different magnifications.
- **With radii**
- Made from low-warp, transparent plastic, coated with a protective layer
- Geometric shapes printed on the underside
- Line widths: 0.05, 0.08, 0.10 and 0.12 mm, different for even millimetre and intermediate dimensions.
  Linear division line accuracy: 0.05 mm over 300 mm. Thermal expansion: 0.08 mm per 10° C
- Standard targets in other versions (e.g. for threads) available on request

Mitutoyo Surftest SJ-210 surface roughness tester

Digi-matic USB

- Handy mobile test device, designed for use in production environments
- Compact design
- Easy to handle
- Suitable for measuring surface roughness directly on the clamped workpiece during production or stationary inspections
- Large, easy-to-read 6 cm (2.4") colour LCD display, can be rotated electronically
- Profiles displayed in real time
- Integrated memory for 10 measurement conditions
- Memory can be expanded with a micro SD card up to max. 2 GB: e.g. 500 measurement conditions + 10,000 measurement values or 500 measurement conditions + 500 profiles, analysis software on request
- With RS232C, Digimatic and USB interfaces
- Foot switch connector
- Colour-based tolerance evaluation
- Allocation of access rights
- Choice of 16 languages
- Switchable mains or battery operation
- Feed unit can either be integrated in the device or used separately with a connection cable
- Motorised feed with up to 3 user-selectable measuring speeds
- Probe system skid radius 40 mm, skid pressure force < 400 mN
- Probe tip geometry in accordance with DIN EN ISO 3274, radius 2 µm, point angle 60°
- Double skid system for measuring sheet metal in accordance with DIN EN ISO 10049 available on request, comprehensive optional accessories on the following pages
- **Technical data**
  Profiles: Roughness profile (R), DF profile, R motif
  Standards: DIN EN ISO, VDA, ANSI, JIS, user-defined conditions
  Measurement range: 360 µm
  Evaluation parameters: Ra, Rq, Rz, Ry, Rp, Rv, Rt, R3z, Rsk, Rku, Rc, RPc, RSm, Rmax, Rz1max, S, HSC, RzJIS, Rppi, RΔa, RΔq, Rlr, Rmr, Rmr(c), RδC, Rk, Rpk, Rvk, Mr1, Mr2, A1, A2, Vo, Rpm, tp, Htp, R, Rx, AR
  Cut-off lengths: λc: 0.08, 0.25, 0.8 and 2.5 mm
  Digital filters: Gaussian, 2CR75, PC75
  Number of individual measurement sections: 1 to 10
  Limit wavelength λs: Set to specification
  Measuring force: 0.75 mN
  Power supply: Mains adapter 230 V, 50 Hz and fitted battery
- Supplied with roughness standard, mains adapter, protective film for the display, carry bag and operating manual

Mitutoyo Surftest SJ-210 surface roughness tester

Digi-matic USB

570526 0001

- Portable mains-independent skid system for determining surface roughness
- Separate feed allows measurements in hard-to-reach places, as well as overhead measurements
- Dust-protected, touch-sensitive control panel and integrated printer
- Extremely easy-to-use and intuitive menu navigation
- Measurement results / profiles shown clearly on a 14.5 cm (5.7") colour display
- 16 languages
- Storage of up to 10 measurement conditions
- Statistics function and colour-coded tolerance analysis
- Customisable password protection
- Storage of measurement data on an optional SD card
- Automated calibration function / can be calibrated based on the average of up to 12 measurements
- Choice of mains or battery operation
- Profile method with single skid system
- Measurement range: X-axis feed = 16 mm, S feed = 5.6 mm
- 60° contact point with 2 µm radius / measuring force 0.75 mN
- Measuring speed: 0.25 mm/s, 0.5 mm/s, 0.75 mm/s
- Analysis parameters: Ra, Rq, Rz, Ry, Rp, Rv, Rt, R3z, Rsk, Rku, Rc, RPc, RSm, Rmax, Rz1max , S, HSC, RzJIS, Rppi, RΔa, RΔq, Rlr, Rmr, Rmr(c), Rδc, Rk, Rpk, Rvk, Mr1, Mr2, A1, A2, Vo, λa, λq, Lo, Rpm, tp, Htp, R, RX, AR, W, AW, Wx, Wte
- Cut-off length: 0.08mm / 0.25 mm / 0.8 mm / 2.5 mm / 8 mm
- Number of individual measurement sections: 1x, 2x, 3x, 4x, 5x, 6x, 7x, 8x, 9x, 10x, unset length
- Digital filter: 2CR75 / PC75 / Gaussian
- Parameters in accordance with DIN EN ISO, VDA, JIS, ANSI and MOTIF
- Data communication: Digimatic, RS-232, SD memory card
- Supplied with roughness standard, mains adapter and 5 rolls of spare paper

Mitutoyo Software SJ Communication Tool

- **Simple analysis software for roughness meters SJ-210 / SJ-310 / SJ-411 / SJ-412**
- **Two measurement and analysis options**
  1. The instruments are connected directly to a PC using a connection cable (accessories), and all relevant settings are entered via the PC.
  Measurement is started from the PC and then analysed using a measured value table and profile curve.
  2. The instruments store the measurements on an optional memory card from the accessories range. The instruments are then connected to a PC, and the measurements are read by the software and measured using a measured value table and profile curve.
- System requirements: Windows XP or higher

ATORN® Surface roughness tester easyRoughness

- Highly accurate roughness meter for workshop and laboratory use
- Compatible with skids and free probes
- Wide range of special measuring probes
- Measuring probes can be extended up to 500 mm
- Automatic calibration
- Measurement lengths configurable from 0.5 to 15 mm
- Configurable measuring speeds
- Calibration of up to 8 measuring probes
- Storage of measurement conditions with images
- Configurable languages: German, English, French, Italian, Spanish, Polish, Chinese
- **Technical data**
  Measured values:
  DIN/ISO: Ra, Rz (DIN), Rmax, R3z, Rt, Rq (RMS), Rk, Rq, Rv, Rpk, Rvk, MR1, MR2, Rpc, C1; C2, contact ratio Rmr, C0, Cz, V0 Rdg, RL0
  JIS: Ra (Jis), Rz (JIS)
  ISO 12085: R, AR, Rx
  Measurement ranges: Ra, Rq 0 - 20.00 µm Rest 0 - 350 µm
  Measurement range in Z: approx. 450 µm
  Contact point: Diamond tip 5 µm 90° (standard) or 2 µm 60° (optional)
  Measuring force diamond: < 0.5 mN
  Probe system: analogue hall effect technology with high-linear output
- Supplied with standard probe SKT/5, standard roughness 3.0 µm, boxed

Mitutoyo Linear scales

INFO

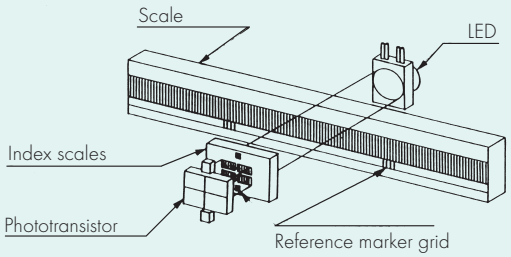
Digital length measurement system

The DRO system (**D**igital **R**ead **O**ut) newly developed by Mitutoyo includes the linear scales of the AT 100 series and the display units (counters) of the K series. Linear scales and counters offer maximum precision in reading axial adjustments of machine tools and measuring instruments.
The DRO system can be assembled to optimally fulfil specific tasks such as use on turning, milling or grinding machines.
The linear scales are supplied in a attachable state and are easy to install. The performance of machines and facilities is increase, read errors are eliminated. Backlash in guides or adjustment backlash is apparent because the dimension of every movement of the slide or a guide piece is read. Linear errors in an axis of travel can be compensated for on the display unit. Fitting must take place parallel to the axis (within 0.2 mm on scale length), or else deviations may arise.

The linear scale systems are offered with three cross sections:

AT 116 Standard profile (cross section 22 x 35 mm) up to 1500 mm with permanently attached connection cable

AT 715 Standard profile with ABSOLUTE scale (cross-section 22 x 36.5 mm) up to 1800 mm with permanently attached connection cable



AT 116

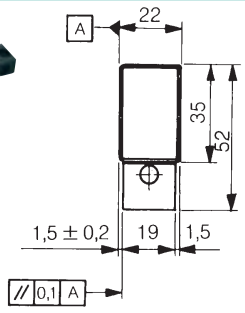
AT 715

The aluminium housing of the linear scale is fitted with an oil-resistant plastic lip on the encoder side. The connection cable are housed in steel and shielded. If the standard length of the connection cable is not sufficient, extension cables (special accessories) are available.
The easy-to-use display units of the K series are available in different models for a wide variety of tasks.

Functional principle AT 112F / AT 116

Caution!
When selecting suitable scales, please always take into account the effective travel of your machine that can be adjusted by hand. Please also bear in mind that a mini-profile AT 112F is available for use in confined installation surroundings.

	KA counter
Zero position	•
ABS origin only AT 715	•
Adjustment of resolution	•
Switchable counting direction	•
mm/inch switching	•
Preselection/zero position	•
Halving of displayed value	•
ABS/INC coordinate switching	•
Zero approximation (INC coordinate)	•
Signal sensor	optional
Hole circle machining	•
Hole row machining	•
Scale reference points* only AT 112 / 115	•
Tool specifications	10
Addition of the values of two axes*	•
RS-232C output	optional
Linear error compensation	•
Stabilisation of last position on display	•
• = Standard accessories * = This function is not available in the two-axes version	



Mitutoyo LINEAR SCALE AT 116 digital length measurement system

- **Standard profile**
- Installation-ready glass scale with aluminium profile casing
- Fasteners included
- Profile cross-section 22 x 35 mm (without encoder unit)
- **Accuracy**: (5 + 5L/1000) µm at 20 °C
- Supplied with operating manual and factory certificate, shipped in disposable packaging
- **Caution:** When selecting suitable scales, please always take into account the effective manually adjusted travel for your machine. Please also bear in mind that a mini profile AT 112F is available for use in tight installation spaces.

With factory certificate!

Mitutoyo Digital display unit LINEAR SCALE model KA200

- Compact design
- Easily readable 15 mm high LED digits
- For connecting model AT 103, AT 116, AT 112F and AT 715 scales on two or three axes
  For connection to turning and milling machines (adjustable mode)
- Adjustable resolution: 0.001 mm and 0.005 mm resolution (for AT1xx scales)
- Display: 8 digits, (-) sign, zero point
  Connection: 230 V / 50 Hz
  Power consumption: 30 VA
- Supplied with mains power cable and operating manual, shipped in disposable packaging

SAUTER TC layer thickness measuring instrument

- For quick and non-destructive layer thickness measurement of coatings on ferro-magnetic base materials and non-ferrous metals
- With external (TE) probe
- Small, handy device
- Easily readable LCD display
- RS 232 C interface
- Measurement principle
  Model TE-F for measuring non-magnetic layers on a ferro-magnetic base material (steel/iron)
  Model TE-N for measuring non-conductive layers (anodic oxide layer, painted surface protection etc.) on non-ferrous metals
  Model TE-FN combination of both aforementioned measurement principles
- Measurement range 0 to 1250 µm
  Resolution < 100 µm = 0.1 µm / > 100 µm = 1 µm
  Minimum strength of base material 0.3 mm
  Smallest measuring area Ø 6 mm
  Smallest curve radius: F = 1.5 mm convex, F = 25 mm concave, N = 3 mm convex, N = 50 mm concave
  Accuracy ± 4% of measured value (standard)
  ± 1% of measured value (two-point calibr.)
  Power supply 4 x LR3 Micro, AAA
  Weight 81 g
  Dimensions L x W x H, 131 x 65 x 28 mm
- Supplied in transport box with zero point plate, spacer foils, 4 batteries LR3 No. 5480794003 and operating manual

ATORN® Layer thickness measuring instruments

Coating thickness measuring instrument professionalCOATING

- Non-destructive measurement of the layer thicknesses of non-magnetic coatings on steel/iron and electric non-conductive coatings on non-ferrous metals
- Robust, dust-sealed and splash-proof housing, IP65
- Intuitive menu guidance allows simple handling, even by untrained personnel
- Single-handed operation
- Three-point support enables precise measurement in every situation
- Data transfer via Bluetooth, WiFi, USB-C
- Storage space for 100,000 measured values
- Battery life approx. 8 hours in use
- **Applications**
  Measurement of layers of paint, varnish, rubber or plastic, chrome or copper, as well as galvanised and hot-dip galvanised coatings on steel and cast iron (ISO FE, ISO NF FE)
  Measurement of layers of paint, varnish or plastic on aluminium, copper or brass (ISO NF)
- **Technical data**
  Measurement standards:
  SSPCPA 2 with Level 1-5, IMO PSPC, ISO 19840, Australian AS 3894.3 B, Swedish IS 18 41 60 etc.
  Measurement ranges:
  0-2500 µm on FE
  0-2000 µm on NF
  Accuracy:
  0-100 µm ≤ 1.0 µm
  100-1000 µm ≤ 1.5 %
  1000-2500 µm: ≤ 3.0 %
- Supplied with: Equipment includes probe, operating manual, base material FE base and NF base, calibration foils, interface cable, carrying loop, 2 x LR6 AA battery, manufacturer's certificate

SAUTER Ultrasound wall thickness measuring instrument

- Non-destructive material thickness measurements (e.g. wall thickness) on homogeneous, sound-conducting materials, e.g. metals, ceramics, plastics, glass
- Large, easily readable display
- Test head Ø 10 mm, test frequency 5 MHz, sonic speed 1,000 - 9,999 m/s
- 1.2 - 230 mm measurement range, 0.1 mm increments
- Individual measurements or scan mode (10 measurements per second)
- Memory for 20 files (100 measurements per file)
- Battery life approx. 150 hours
- Weight 245 g
- Supplied in a plastic case with a 5 MHz test head, 2x LR6 batteries (no. 5480794006), connection agent (70 ml), operating manual

Designation	Measurement range mm	art.no.	€

SAUTER HMM rebound hardness tester

- For testing the hardness of large, solid workpieces
- Minimum wall thickness 8 mm, minimum workpiece weight 3 kg
- Workpiece surface Ra < 10 µm
- Integrated data storage for up to 9 measurement groups
- Basis of LEEB hardness test and calculation
- Conversion of measured hardness values into tensile strength
- Switchable backlighting, battery operation
- Dimensions, length x width x height: 150 x 80 x 30 mm
- Direct display of HRC, HRB, HV, HB, HS and HL parameters
- **Technical data:**
  Hardness scale ranges
  HRC 19.8 - 68.5
  HRB 13.5 - 101.7
  HV 80 - 976
  HB 30 - 655

Mitutoyo Stationary Rockwell hardness testers

- Robust hardness testing instruments for workshops and testing rooms
- Rockwell (HR-110MR / HR-320MS) and Super Rockwell (HR-320MS) analysis
- For testing steel and other metals
- **HR-110MR**
  Rockwell parameters HRA / HRC / HRB / HRD / HRF / HRG
  Manual switching of testing force by means of weights
  Application of total testing force: via hand lever
  Measurement values displayed via dual scale dial indicator (Ø 86 mm) with drag indicator
  0.5 HR readings
  Testing pre-load 98.07N / testing loads 588.4N / 980.7N / 1471N
- **HR-320MS**
  Rockwell parameters HRA / HRC / HRB / HRD / HRF / HRG
  Super Rockwell parameters HRN / HRT
  Manual switching of testing force by means of weights
  Application of total testing force: by motor
  Digital display for displaying hardness values, adjusting load application durations, conversion to other parameters, tolerance comparisons
  0.1 HR readings
  Digimatic data outputs and RS-232C
  Testing pre-loads 98.07N / 29.42N, testing loads 147.1N / 294.2N / 441.3N / 588.4N / 980.7N / 1471N

- **Technical data:**
  Workpiece height max. 180 mm / reach 165 mm
- Supplied with planar measuring table Ø 64 mm, V-anvil Ø 40 x 30 mm, diamond indenters taper, ball Ø 1/16 inch, hardness reference blocks HRC 30-35 / 60-65 HRB 90-95 (additionally with HR-320MS: 64-69 HR30N / 70-79 HR30T), dust protection cover, operating manual

SAUTER Digital force measuring devices

Model FK

- Robust device for measuring tensile and compressive force
- Reliable operation thanks to ergonomic casing
- Attachment for all SAUTER test stands on the back
- Display switches automatically depending on direction of use
- Peak-hold function for recording peak values
- Track function for continuous measurement
- Measuring frequency 1,000 Hz
- Measurement uncertainty 0.5% (of max. value)
- Overload protection 200 %
- Automatic switch-off
- Battery operation
- Selectable units: N, kg, lb, oz
- Dimensions: Length 195 x width 84 x height 35 mm, weight: 600 g
- Supplied with batteries, mains adapter, one of each attachment: Hooked, pointed, V-shaped, blade and flat, and one 90 mm extension bar
- Measurement ranges of 10, 25 and 50 N available on request

KERN Hanging scales HCD

UNIT

- high-resolution suspension scales
- Rotating hooks with safety lock
- Functions conveniently accessed via radio remote control, range approx. 20m
- Data Hold function: if the scales are left idle, the displayed weight will automatically freeze until the hold button is pressed
- Tare: Resets the display to "0" while a load is on the scales so that any loads removed or added are displayed directly
- **Technical data:**
  - Backlit LCD display with 28mm-high digits
  - Battery operation, 4 x 1.5 V LR6 AA approx. 100 hours
  - Casing dimensions 65 x 24 x 100mm
  - Operating temperature 5-35°C
- Calibration according to DKD
- Supplied with remote control

KERN Crane scale HFD

UNIT

- high-resolution crane scales up to 12 tons
- robust design
- supports SOLAS-compliant weighing of freight
- Data Hold function: if the scales are left idle, the displayed weight will automatically freeze until the hold button is pressed
- Functions conveniently accessed via radio remote control, range approx. 20m
- Reading switches automatically as loads get heavier
- Internal battery, 70-hour operating time (without backlight)
- Housing dimensions 194 x 129 x 145mm
- Operating temperature -10 to 40°C
- Supplied with remote control without safety hooks

KERN Counting scales CPB

- Professional counting and weighing
- 3 displays: Unit weight, total weight and total unit quantity
- Large LCD display, digit height 20 mm
- Battery and mains operation
- Battery charge status indicator
- 225 x 294 mm stainless steel weighing platform
- Dimensions, width x depth x height = 320 x 350 x 125 mm
- Weight 3.9 kg
- DKD calibration
- Supplied with mains adapter, no battery

KERN Counting system CCS

- Comprising quantity scales (platform scales) and reference scales
- Stainless steel weighing plates
- Quantity scales with IP65 weighing cells
- Reference scales can also be used separately as counting scales
- Large, backlit LCD display with 20 mm high digits
- Precise counting by means of automated reference optimisation, which gradually improves the average value of the part weight
- DKD calibration
- Supplied with mains adapter

KERN Precision scales PCB

UNIT | TARE | PCS | 230 V | RS232C

- Simple, self-explanatory 5-key operation
- Option to switch between mains/battery operation
- Backlit LCD display with 15 mm high digits
- Settling time 3 sec.
- **Calibration program (CAL):** for accuracy adjustment, optional external calibration weight required
- **Unit counting**: 5, 10, 25 and 50 unit reference counts available
- Display can be switched between units and weight
- **Formulation**: separate memory for the weight of the tare container and formulation components (net total)
- Battery operation (optional): 6LR61, with automatic switch-off
- Dimensions: 163 x 245 x 79 mm
- DKD calibration
- Supplied with power supply, no battery

KERN Platform scales DE-D

IP65 | UNIT | TARE | PCS | 230 V | RS232C

- Package, industrial and counting scales in one instrument
- Dual-range scales, resolution automatically adapted to the weighing range
- Large LCD display, digit height 25 mm
- Display unit (225 x 110 x 45 mm) with approx. 1.4 m connection cable
- Wall bracket for display unit optional
- Optional stand also available for raising the display unit
- Option to switch between mains/battery operation
- Settling time 2 - 3 sec.
- **Unit counting**: 5, 10, 25 and 50 unit reference counts available
- Display can be switched between units and weight
- **Formulation**: Separate memory for the weight of the tare container and formulation components (net total)
- DKD calibration
- Supplied with power supply, no battery

ATORN® Hexagonal offset ball-head screwdriver

- **with ball head**
- for hexagonal socket head screws
- Chamfered key ends, can be used for screwing at angles up to 30°
- **Material**: high-quality chrome vanadium steel (59CrMoV4), steel grey or nickel-plated
- **Version: colour-coded:** The colour coding system assigns a colour to each wrench width so the right tool can be grabbed quickly.

ATORN® Torque wrenches

- Haptic and acoustic adjustment aid
- User-friendly thanks to an ergonomically shaped handle with a structured comfort-grip surface
- Clearly audible and tangible short-path release when the set torque is reached
- Quickly secured and released via locking ring
- Dual scale with N·m and lbf-ft.
- Viewing window protects the scale against damage
- High-quality permanent laser marking
- Shipped in protective tube packaging incl. a hanging fixture
- Made in Germany

Lever-reversible ratchet

- Accuracy ± 3 % of scale value, ± 4 % with 1 - 6 Nm torque wrench
- ½ inch ratchet with 32 teeth, 3/8 inch ratchet with 30 teeth, ¼ inch ratchet with 20 teeth
- DIN EN ISO 6789:2003 (D) square in accordance with DIN 3120, ISO 1174-1

PRYOR Interchangeable steel type

- Special steel with precision design
- Suitable for marking steel up to 1,300 N/mm² in strength
- Set consists of 1 hand-held holder and 100 individual steel type pieces
- Several pieces of steel type can be inserted side by side in the holder.
- The precise design of the holder and the steel type produces clean, clear lettering with uniform spacing.
- For labelling name or rating plates as well as tools, machine parts etc.
- **Normal type:** the punched marking is directly legible

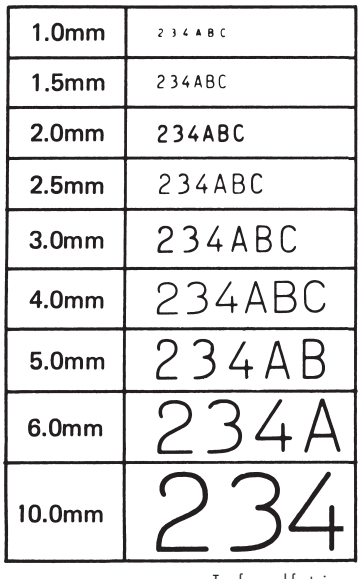
PRYOR Precision hand punch



- Special steel numeral and letter stamps
- Forged blanks with perfectly centred precision engraving
- Stamp hardness 59 - 61 HRC
- Can be used with materials up to 1300 N/mm2 in strength
- **Normal type:** the punched marking is directly legible
- **Mirrored type:** the punched marking appears on the workpiece as a mirror image
- Numeral sets = 10 pieces, 0-9
Letter sets = 27 pieces, A-Z and &
- Plastic box
- Individual punch stamps available on request!

ARIANA High-performance cutting fluid concentrate

- Water-miscible, **chlorine-free**
- Universal applications, with high additivation
- High level of corrosion protection even at residual concentration
- Particularly suitable for NC and CNC centres
- Application concentration 3 - 7 %
- pH value at 5 % concentration approx. 9.4
- Refractive index 1.1 (scale value = concentration)

Description	Contents l	art.no.	€

ARIANA High-performance cutting oil

- **Chlorine and silicone-free**, a non-water-soluble heavy-duty cutting oil
- Universal cutting oil for all materials
- Massive increase in tool endurance
- Ideal for high-alloy steel grades, optimum workpiece surfaces
- Also for turning, milling, reaming, thread cutting, broaching, sawing, etc.
- Gentle on the skin and environmentally friendly, low volatility
- Applied with a squeeze bottle, sprayer or lubricating device
- Can also be used for minimum-volume lubrication

ARIANA Thread cutting agent

- Water/soap-based paste
- Ideally suited to thread cutting, thread drilling, centring, broaching and milling
- Latest generation multi-purpose lubricant, applied directly from the squeeze bottle onto the metal surface to be treated, significantly increases tool life
- Semi-paste grease
- Ideal for all metals, including stainless steel
- **Free from petroleum, chlorine and sulphur**
- Light blue, odour-free, flash point > 225 °C, melting point 32 °C

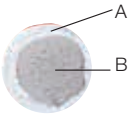
PIG® Repair putty



- **Bonds like a two-part epoxy resin putty, without oiliness**
- PIG® Repair Putty cements everything – iron, glass, brickwork and most plastics
- **Part A** and **Part B** of the prepared epoxy system are in the same tube – simply knead the putty and apply
- Solid in 20 minutes, harder than cement after one hour
- Solvent-free, contains no VOC
- Can be stored unopened for at least two years (at 20 - 25°C, protect against direct sunlight)
- **Unit prices (graduated)**

Can be used everywhere for quick, effortless repairs:

- Sealing leaks in steel drums
- Repairing holes and cracks in pipes
- Mending leaks on steel and fibreglass tanks
- Restoring or re-cutting threads
- Sealing cracks in casings
- Filling and smoothing holes and hollows in floors
- Repairing steam conduits and radiators
- Sealing leaky connections
- Filling nail holes in walls
- Repairing faulty toilets
- Closing multiple cavities during injection moulding
- Reinforcing cast steel moulds
- Sealing holes in castings during production
- Making temporary repairs to heating ducts
- Repairing transformers, porcelain bushings and re-closers
- Patching aluminium containers during the production process
- Creating models, holding devices and prototypes
- Carrying out preliminary tube repairs to large vacuum cleaning systems, and much more.

ATORN® LED workplace light

LED workplace light

- The light is completely water-proof and in combination with the flexible swan neck allows accurate working at any given place. Even inside machinery and in hard-to-reach spots, work surfaces can be perfectly illuminated.
- Lamp head and housing constructed from robust anodised aluminium, flexible light holder hose constructed from metal with rubber sheathing
- **Protection class IP67**
- Resistant to water, oil, coolant and cutting fluid, as well as cleaning agents
- Colour temperature approx. 5,500K (cool white)
- Beam angle approx. 38°
- **Energy Efficiency Class A+**
- **Connection types:** Direct connection to the machine (24V) or all conventional supply voltages (110V-240V)
- **Supplied with:** complete with branded high-performance LED, screw clamp and screws for direct attachment to machine, table or wall

KÜMI coolant supply system

- Adjustable coolant hose, comprising individual plastic elements
- For use on all machine tools
- Replacement for conventional systems, plastic elements can be flexibly adjusted which allows coolant to reach any desired position
- Non-conducting and resistant to most chemicals and solvents
- Also suitable for blowing out workpieces, clamping equipment and machine tables
- Complete systems with magnetic anchoring bases and individual elements allow for a large number of possible combinations
- Operating pressure max. 6 bar
- **Operating pressure up to max. 60 bar is possible by attaching band clamps 7630104001 or 7630204001**
- Compatible with the following systems: FLEXOLINE, OSSMANN, LOC-LINE, HYDRA, SNAPLOC, LUBE-COOL, VARIO, MAXIFLEXI
- Systems benefit from closer-fitting modules. This improves their ability to withstand higher pressures and ensures that the fluid stream remains directionally stable.

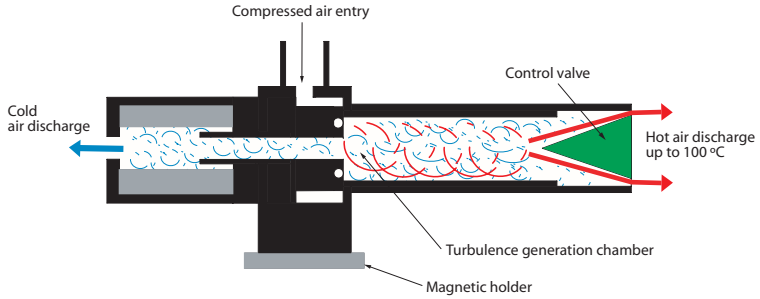
Use with mechanical pump or automatic pulse generator for drop lubrication

Used for constant drop or fine-spray lubrication



Used for fine-spray lubrication

SARA Pneumatic cold air nozzle

- Localised cooling for machine tools
- Dual function: both hot and cold air
- Ideal for use when no lubricating or coolant fluids are desired
- Simple compressed air connection (3 - 8 bar)
- **Operates based on the principle of a vortex tube in which two counter-rotating air flows are created**
- Cold air outlet in the blue component (down to -48 °C)
- Hot air outlet in the red component (up to 100 °C)
- Air consumption at 7 - 8 bar approx. 270 l/min
- Supplied with magnetic base, spherical valve, connection for 3/8 inch quick-action pneumatic coupling, silencer, 1/2 inch articulated hose with round nozzle

sunnex Machine shoes OSM

Compensation/vibration damping

- For loads of up to 5,500 kg per machine shoe
- Outstanding compensation properties
- Efficient vibration damping
- Reduction in disturbing direct noise
- Pressure plate with fine-pitch thread, adjusted using integrated compensation screws
- Steel casing, rubber damping element, resistant to most types of grease, acid, oil and coolant
- Particularly suitable for machine tools, presses, stamping and embossing machines, injection moulding machines

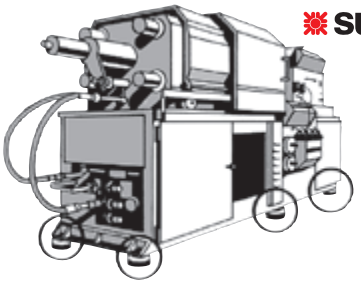
Machine shoes

sunnex

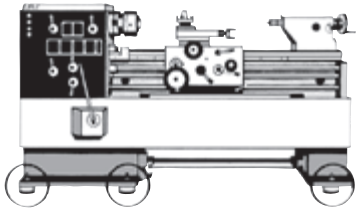
Suitable for setting up tool, printing, plastic, textile and many other machines in all industries.
90% of all set-up problems with machines and related power units can be resolved with SUNNEX machine shoes.
Eliminates up to 85% of vibrations, impacts and noise.

Advantages:

- Low cost
- No need to create foundations
- Production can commence immediately after delivery and fitting
- Retrofitting your machine fleet can be done quickly



Selection of machine shoes:
In order to select the correct SUNNEX machine shoe sizes, certain Information is needed:

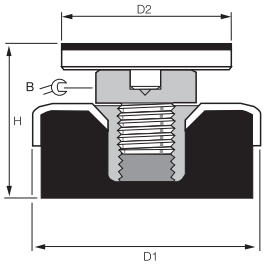


- Machine weight
- Number of supported surfaces for the machine shoes
- Supported load per machine shoe

Calculation:

$$\frac{\text{Machine weight}}{\text{Number of supported surfaces}} = \text{Size of the machine shoes}$$

(within the threshold range, the smaller of the possible sizes must be used!)



sunnex Machine shoes FSM

Compensation/vibration damping

- For loads of up to 1,000 kg per machine shoe
- For applications where screw holes are not available or are difficult to access
- Efficient vibration damping
- Reduction in disturbing direct noise
- Specially for free-standing applications
- Coated pressure plate, compensation screw in steel housing, damping element made from rubber, resistant to most types of grease, acid, oil and coolant
- Particularly suitable for machine tools, workshop machinery, stamping and embossing machines

sunnex Machine shoes AM

- **Compensation/vibration damping**
- For loads of up to 2,000 kg per machine shoe
- Stainless steel version also available for particularly demanding applications
- Articulated screw for inclined contact surfaces
- For damping light and medium-heavy machines
- Stainless steel version particularly suitable for humid, wet or corrosive environments with particularly high hygiene requirements
- Galvanised version for less challenging environments
- Integrated compensation screw
- Pitch adjustable by seven degrees
- Particularly suitable for the foodstuffs industry, process engineering, conveyor tracks, smaller workshop machines

7154

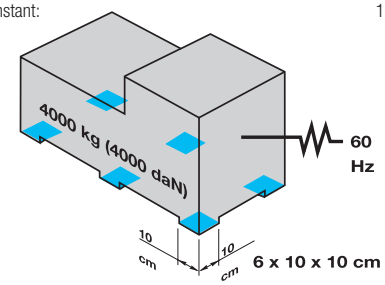
sunnex Damping mat SP

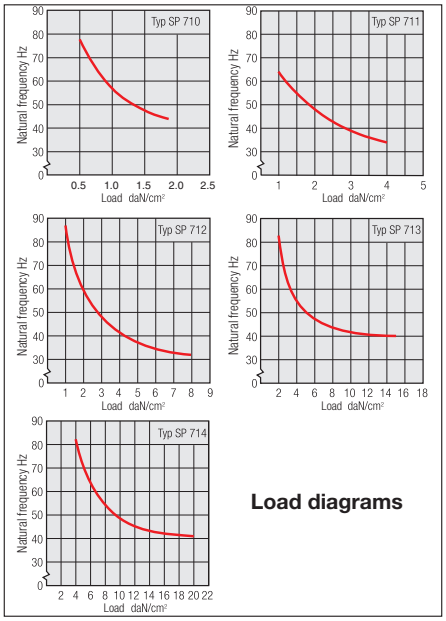


- Five different damping classes
- Efficient impact/vibration damping
- Reduces the transmission of machine noise
- Reduces the tendency of machines to "wander"
- For a wide range of industrial applications
- Five different versions with varying hardness, natural frequencies and load bearing capacities
- Specially developed nitrile rubber, resistant to most types of grease, acid, oil and coolant
- Can be cut to size

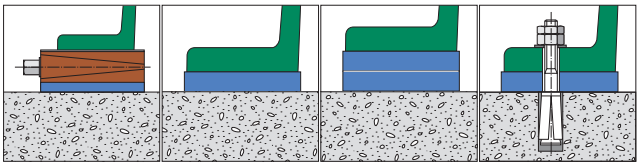
Calculation

Example:

Machine weight:	4,000 kg
Interference frequency:	60 Hz
Circulation:	10 x 10 cm / SP unit
Number of surfaces:	6
Constant:	1.5



Surface load / plate:



$$\frac{\text{Weight}}{\text{Total surface}} = \frac{4000}{6x10x10} = 6.67\ \text{daN/cm}^2$$

Max. natural frequency of the MP unit:

$$\frac{\text{Interference frequency}}{1.5} = \frac{60}{1.5} = 40\ \text{Hz}$$

SARA® One-handed pneumatic die grinder

- Small design for universal use in confined spaces
- Suitable for car and commercial vehicle repairs, mechanical engineering, body construction and metalwork
- Infinitely variable speed control
- Air consumption far below average due to the use of modern pneumatic motors
- Safety lever to prevent accidental switch-on
- Cold insulation on the handle
- Supplied with 1/4 inch BSPT air connection and plug nipple
- Exhaust air can be directed away from users via a 360° rotatable exhaust air cover on the side.
- Supplied with Ø 6 mm collet

SARA® Pneumatic belt grinder

- Very compact design for working in narrow spaces
- Easy replacement of abrasive belts thanks to integrated quick-clamp mechanism
- Handle can be angled individually by users to set the desired working position
- Cold protection due to insulated handle
- Exhaust air is directed away from users via an exhaust air cover
- Infinitely variable speed control via an easy to operate power control button
- Supplied with 1/4 inch BSPT air connection and plug nipple

- With curved, star-shaped safety nozzle in the form of an extension nozzle
- Improved working conditions thanks to noise reduction below 80 dB (A)

Design	art.no.	€
With safety nozzle	**742100** 0002	19,40

7123

Plastic pistol with BlowStar nozzle

- Combined safety and sound-insulating nozzle
- Noise reduction to as low as 74 dB (A)

Design	art.no.	€
With safety extension nozzle	**742100** 0003	32,10

7123

Air-saving nozzle

- Regulation of air quantity and reduction of pressure in conjunction with blow-out gun, max. operating pressure: 10 bar
- Aluminium base body, other parts plastic
- Volume flow at 6 bar: 10 to 95 l/min.
- **Advantages:** The energy-saving nozzle is controllable. Among other things, downward regulation prevents sharp, pointed chips or harmful liquids such as emulsions from flying around. This helps to avoid injuries.
- Controlled by turning the operating sleeve to 7 locked-in positions, labelled with +/-, total 125°

model	Connecting thread	art.no.	€
Air-saving nozzle	M 12 x 1.25	**742092** 0006	18,70

SARA® Accessories for pneumatic tools

Spiral hose

- Tubes on both sides fully-integrated with rotating connecting threads (galvanised brass), as well as coupling and connector
- Connections with sealing ring
- Without narrowed cross-section
- Kink-resistant thanks to anti-kink protection
- Extremely flexible
- Lower wear than with polyamide hoses thanks to soft surfaces, whereby the risk of scratching sensitive surfaces is considerably reduced

SARA®

Safety couplings

- Safety coupling pursuant to ISO 4414, DIN EN 983 with push-button operation prevents 'whip effect' when uncoupling
- Wear parts made entirely of galvanised steel and housing made of aluminium, thus particularly sturdy and durable
- Threads and hose connections can be rotated under pressure
- Increased user comfort thanks to integrated moulded handle
- Sliding sleeve up to 8 bar can be easily operated with one hand
- REACH and RoHS-compliant
- **Steel plugs should be used as counterparts**

- **Operation**
  Step 1 Press the button once to vent the coupling; the plug should remain secure in the sleeve.
  Step 2 Press the button a second time to unlock the plug, which can then be safely removed.

FILTERMIST Centrifugal separator

INFO

- Oil mist is harmful to health.
- Oil mist causes slippery floors and can cause damage to electrical switchgears.
- Oil mist can lead to deposits in ventilation pipes. This is a fire hazard.
- Laws and regulations are becoming more and more stringent.
- The recirculation of purified air reduces energy and heating costs.

▸ Centrifugal separators create cleaner, safer and more productive workplaces!

Function

1. Oil mist is eliminated at the source.
2. Oil mist is removed from the air using centrifugal force.
3. The separated oil is returned to the machine.
4. Clean air is released back into the workshop.
5. A special secondary filter allows for the removal of smoke and steam and increases the degree of separation.

A perforated drum with specially designed blades rotates at high speed. Oil mist is sucked into the device and bounces off the blades. Filter mats aid the process in which small droplets form larger ones and filter out swirling solid particles. Centrifugal force presses the oil into the housing wall of the device. From here it is fed back into the machine or collecting container.
What is left is cleaner air, which is returned to the factory floor.

Mounting options

FILTERMIST Centrifugal separator S series and XCEL2

- A perforated steel drum is driven centrically and directly by an electric motor. Four blades inside the drum suck the oil and emulsion mist into the drum. This process spins the mist against the blades at a speed of over 50 m/sec. The small oil mist particles are condensed back into liquid form before they are forced against the inner wall of the filter housing by the centrifugal force. In this process, the coarse dirt particles are retained by filter mats. The oil concentrate is returned via a hose to the coolant container and the purified air remains in the production hall.
- All versions comply with CE regulations.
- **Energy-efficient IE3 motors for models FX4002 - FX7002**
- **Test certificate available for IFA-tested smoke filter on request**
- Use: for turning, milling and wet grinding
- Standard colour RAL 7035 (light grey), other RAL colours available on request
- Models subject to change without notice
- **Stainless steel version:** For the removal of smoke and vapour when washing parts (parts washing machine / partswasher)
- **Supplied with:** Oil return hose (S series 2 m, FX series 4 m), assembly and operating instructions, no appliance switch
- **Pricing:** ex works, including packaging

Superfine particle filter

- **compact and low-cost method to remove ultra-file oil mist particles from the workshop air**
- **ideal for chip removal processes with pure oil cooling and high-pressure pumps**
- synthetic high-tech filter material with a drainage effect
- allows the recirculation of filtered oil through a patented Venturi suction system – extends the service life of the filter and lowers operating costs.
- Certified in accordance with EPA Class E10

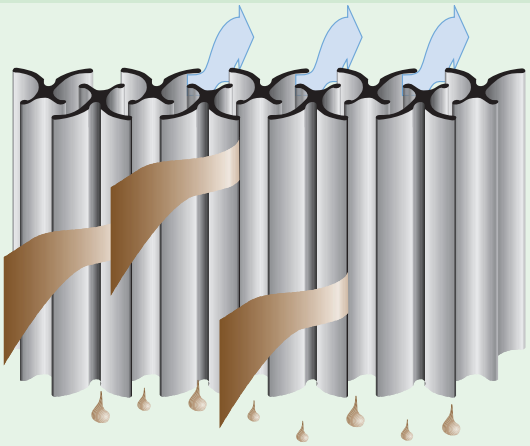
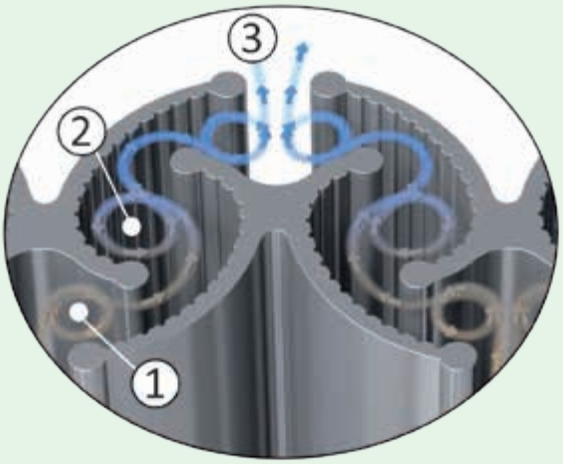
UC2-SDIII with HEPA filter attachment, side extraction

UC2-SDIII mounting on the machine



X-Cyclone® Separator



INFO

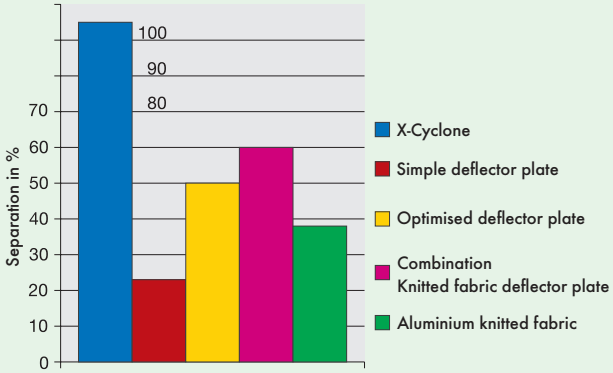
- Effective mechanical separation of oils, emulsions and other liquid mists (aerosols)
- Patented special profiles arranged into 2 separable panel planes
- Self-cleaning effect due to the special profile formation, smooth surfaces and arrangement

All basic elements can be cleaned and reused, no disposable filters! Flame resistance protection DIN EN 16282

The use of an upstream **X-Cyclone®** system means that up to **96% of particles in the 3.0-5.0 µm** range can be separated. The maintenance intervals of electrostatic industrial filters can consequently be extended by at least 100 %. There is no need to use any other mechanical filter media (no disposal costs).

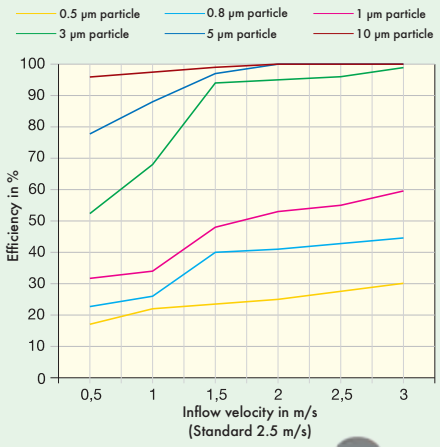
Technology and operating principle

Stage 1 Pre-separation due to turbulence and swirling in the chamber (1)

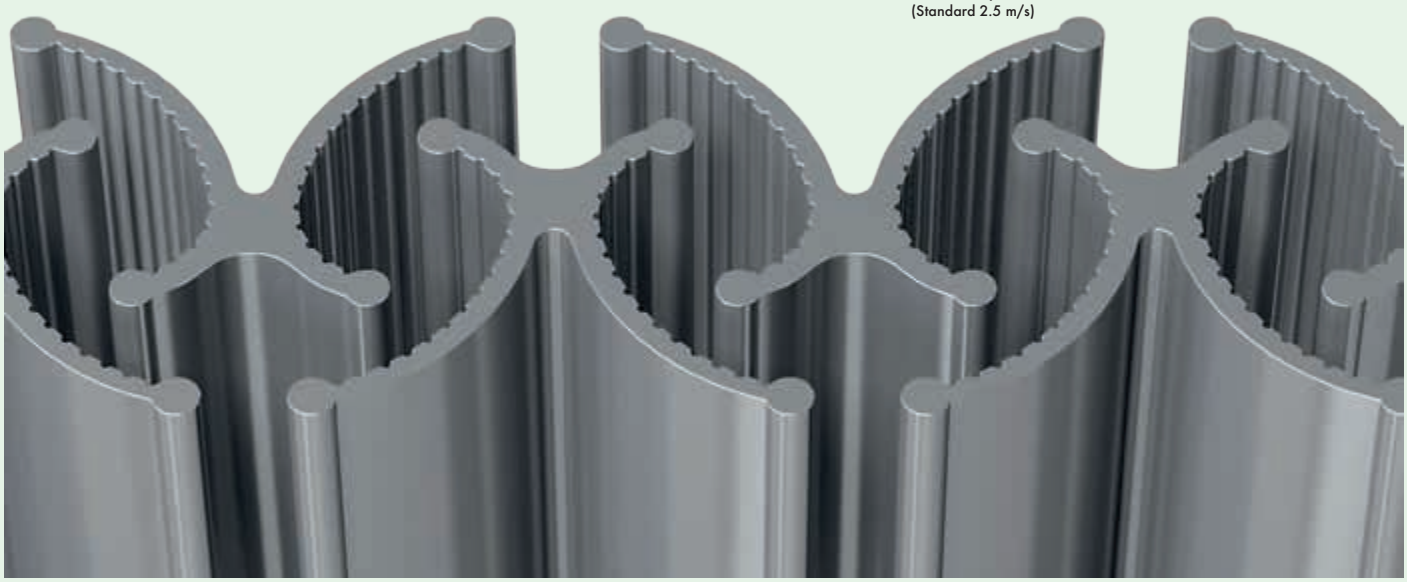


Stage 2 Cyclone effect in the chamber (2) with an extremely high medium tension, relief and tension again. Expulsion of the smallest particle mass.

Stage 3 An **X-Cyclone®** separation element features **X-Cyclone®**, which is always arranged such that the air escaping from two cyclones comes together in a single chamber (3). A certain degree of agglomeration (merging) and turbulence with swirling causes extremely small particles to be separated further.



Flame exposure test according to DIN EN 16282



Air can flood the **X-Cyclone®** basic element, but the flames are blocked. Even in the event of an explosion in the workspace, the **X-Cyclone®** prevents any penetration of the flames and blast. Downstream equipment or drainage systems are thus protected.

Effectiveness of various pre-separators by comparison

Separation efficiency of various particle sizes

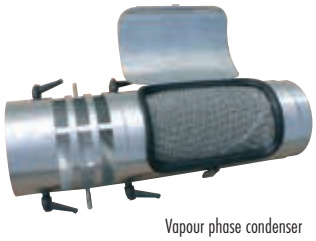
SARA® Ultra-Cleaner modular emulsion mist separator

- **Mechanical, with patented X-Cyclone®agglomerator system**
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- **Works without disposable filters – no subsequent costs!**
- Effective separation of oils, emulsions, other fluids and solid particles
- Complete unit as a recirculating device with an integrated ventilator
- Robust and torsion-free housing made of powder-coated stainless steel (RAL 7035, light grey), smooth internal surface and with service opening
- Bottom section formed as an oil and water-tight collection tray
- Collecting tray fitted with drain cock for emptying, optional siphon available
- Thanks to the diverse installation and assembly possibilities of the Ultra-Cleaner system, most extraction problems arising in connection with various machining processes and the use of different coolant lubricants and oils can be solved with a single appliance.
- Developed, designed and manufactured in conformity with the relevant EU directives
- Ultra-Cleaners are tested for flame resistance in accordance with DIN EN 16282
- Separation efficiencies tested and confirmed by the Fraunhofer Institute for Toxicology and Experimental Medicine
- Permissible ambient temperature for all models 0°C to 50°C
- **Supplied with:** Ultra-Cleaner with frequency converter and motor cover, agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

Self-regulating separator

NEW · NUOVO · NY · NOUVEAU · NUEVO

Single units



- **Filter system automatically regulates the motor output according to the degree of contamination of the separator. This guarantees that the volume flow, inflow velocity and separation efficiency remain the same until complete contamination (red status indicator).**

SARA® Emulsion mist separator Ultra-Eco compact

- **CFD-optimised high-performance separation system with a separation rate of up to 99.9999%**.
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers**.
- **for processing machines up to approx. 2m³ workspace volume**
- effective separation of liquid-based aerosols
- compact design, direct assembly on the machine
- robust and torsion-free housing made of powder-coated stainless steel
- integrated long-term HEPA filter
- designed, constructed and produced in Germany
- **Supplied with:** Emulsion mist separator Ultra-Eco compact, HEPA filter
- **Pricing:** ex works, including packaging

SARA® Ultra-Jet emulsion mist separator

- **Mechanical, with patented X-Cyclone® agglomerator system**
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- **No speed regulation**
- **No disposable filters**
- Depending on size, suitable for processing machines of approx. 1-3 m^3 Suitable for internal chamber volume and light-duty chip-removal processes
- Compact design, direct mounting on the machine
- Up to four filter stages, can be retrofitted with a HEPA filter
- Dynamic-static combined filter system
- Dynamically balanced high-performance fan integrated into the filter unit
- Service opening with quick-release clamps
- ULTRA-JET is tested for flame resistance in accordance with DIN EN 16282
- Stainless steel housing powder-coated in RAL 7035 (light grey), high-performance X-Cyclone® separator profiles made of aluminium
- **Supplied with:** Ø 160/150 mm reducer with chip pre-filter insert, 3 m oil return hose
- **Pricing:** ex works, including packaging

SARA® Electrostatic oil mist separator

- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- Developed for extracting pure oil mists on cutting machines
- Pre-filtering of aerosols and liquid particles by the patented X-Cyclone® and agglomerator system
- Aerosols and particles measuring less than 1µm are separated in the electrostatic collector.
- **All filter elements can be cleaned and reused – no disposable filters.**
- The base of the housing is an oil and water-tight collection tray.
- TÜV-tested fire screen in accordance with DIN EN 16282
- Appliances comply with an ozone limit of 0.2mg/m3
- Permissible ambient temperature 0°C to 40°C
- Stainless steel housing, powder-coated in RAL 7035 (light grey)
- other RAL colours available on request
- Supplied ready to plug in (Harting HAN 10) with integrated fan
- **Supplied with:** Electrostat, glass fibre agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

Self-regulating separator

Single unit

- **Filter system automatically regulates the motor output according to the degree of contamination of the separator. This guarantees that the volume flow, inflow velocity and separation efficiency remain the same until complete contamination (red status indicator).**
- Digital wear indicator

SARA® Modular separator with spray system

- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- **Specially developed for use when machining dry cast iron, graphite and plastics, and for machining processes which generate extensive vapour and smoke.**
- **Water wall formed inside the appliance for pre-filtering**
- Aerosols, solid particles such as dust created by cast iron machining, and hazardous gas molecules are bound and washed out
- The filter system must be connected to the existing cooling circuit on the machine or alternatively to a separate tank and pump supplied by the customer.
- 1" hose connection for inlet and 2" thread for outlet
- Flow-optimised air duct inside the appliance ensures that the entire filter surface is sprayed while reducing water circulation volume.
- The service life of the recirculated coolant is extended as a result of oxygenation
- Separation of aerosols and liquid particles by the patented X-Cyclone® and agglomerator system
- Permissible ambient temperature 0°C to 50°C
- Stainless steel housing, powder-coated in RAL 7035 (light grey),
- other RAL colours available on request
- **Supplied with:** Spray mist separator with nozzles, agglomerator and X-Cyclone® filter insert
- **Pricing:** ex works, including packaging

SARA® Mobile emulsion mist separator

- **With patented X-Cyclone® agglomerator system**
- **Thanks to European ErP directives, energy savings of several thousand euros are possible compared to conventional air purifiers.**
- Effective separation of liquid-based aerosols and solid particles
- Robust and torsion-free housing made of powder-coated stainless steel (RAL 7035 - light grey)
- Fan impeller and electric motor in separate, flow-optimised pressure casing
- The medium pressure fan is enclosed in a flow-optimised, cast aluminium housing. There are no exposed electric or motor components.
- HEPA filter with 30 m² filter surface
- Suction arm with integrated stainless steel mechanics
- An intelligent monitoring system with electronic flow sensors guarantees the continuous function monitoring of the suction.
- Basic elements with spark and flame-arrest protection tested in accordance with UL 1046, ULC-S 649, JFEA, DIN 18869-5 and DIN EN 16282
- Efficiency and function of the air purifier certified by CFD flow analysis
- The air flows indicated in the product description are achieved throughout the entire operating life.
- Designed, constructed and produced in Germany
- **Supplied with:** Mobile emulsion mist separator with one or two suction arms, X-Cyclone® filter insert, HEPA filter
- **Pricing:** ex works, including packaging

SARA® Mobile smoke filter 3D

- **Removal of smoke, vapour, odour and gas from exhaust air**.
- The fan is designed for energy-efficiency.
- Thorough air purification and air conditioning using gas filter for odour reduction, HEPA H13 high-performance particle and dust filter.
- Robust and torsion-free housing made of powder-coated stainless steel (RAL 7035 - light grey).
- The HEPA filter is equipped with a high-quality glass-fibre medium and has a large filtering surface.
- Suction arm with integrated stainless steel mechanics
- An intelligent monitoring system with electronic flow sensors guarantees the continuous function monitoring of the suction.
- The air flows indicated in the product description are achieved throughout the entire operating life.
- Designed, constructed and produced in Germany
- **Applications:** 3D printing, laser engraving, laser marking, laser cutting, wafer processing, eroding and soldering
- **Supplied with:** 3D smoke filter with two suction arms, gas filter, HEPA H13 high-performance particle filter, coarse particle filter
- **Pricing:** ex works, including packaging

SARA® SARA-PAC Power-Air-Cleaner dry dust filter system

- Separation system with air flow of 900 m³/h or 2000 m³/h
- For virtually all typical application problems in industrial and artisan manufacturing relating to the extraction of dry dust
- The basic unit is a pocket filtration device with polyester needle felt filter bags, which can be cleaned using either a vibrating roller or a pneumatic vibrator.
- Typical areas of application include the extraction of dust generated by polishing, cutting, sawing, milling as well as de-burring when machining metal, stone, wood and plastic
- Standard colour RAL 5007 (brilliant blue), other RAL colours available on request
- **Pricing:** ex works, including packaging

Suction hose Flexi 75

- Flexible, pliable segment hose made of acetal copolymer
- Specially developed to extract chips, smoke, vapour, gas, lubricant mist and other media.
- **Outer diameter 75 mm**
- Individual hose segments can be joined to any desired length and combined with any nozzles and accessories.
- Can be accurately set-up with just one hand.

SARA® Filter fleece

INFO

Save 30% on maintenance costs | No downtime | 2 years' protection with one roll | No opening the switch cabinets | Replace in just 5 seconds | Protect valuable installations for just 5 cents | Prevent the spread of harmful particles | Visual check: filter is replaced in good time

SARA® Filter fleece

- Filter fleece to protect electrical and electronic equipment for industrial manufacturing plants and electric motors against oil mist and dust.
- Heavily contaminated filters can reduce the airflow and cause the device to overheat.
- The inspection for replacing the filter fleece is visual. If the filter is covered in impurities, it must be replaced.

Up to 30 % savings in maintenance costs!

Filter fleece for switch cabinets

- Each roll contains 110 sheets
- Sheet length 200mm
- Magnetic holder
- **Suitable for machine tools, cooling systems, control cabinets, robots, CNC machines**

Cleaning with ultrasonics

INFO

Ultrasonics
Tiny imploding vacuum bubbles have an intense yet gentle cleaning effect.

Temperature
In most cases, the cleaning effect is greatly enhanced by heat.

Chemistry
The right cleaning chemistry reduces surface tension and loosens and binds particles of dirt.

Time
The use of coordinated chemistry during ultrasonic cleaning significantly shortens the cleaning time.

The Sinner's Circle – the four influencing factors in the ultrasonic cleaning process

Classic fields of application
Surface technology, optics, laboratory, mechanical and plant engineering, watch and jewellery technology, medicine, dental, hygiene, medical engineering, aviation, electronics, automobile industry, textile industry, food processing industry and much more besides

Ultrasonic cleaning – one of the best procedures around today
Ecological, economical, intense and gentle at the same time.

Ultrasonics shorten the cleaning time

"Ultrasonics" is used to refer to vibrations above the range audible to the human ear (> 20 kHz). Vibrations of between 20 and 130 kHz are used for cleaning. Using vibrating elements attached to the tray shelf of a cleaning tray, underpressure and overpressure waves ripple through the liquid. From a particular vibration power

density, the liquid compound ruptures and tiny, nanometre-sized vacuum bubbles are created. These tiny bubbles implode near the surface of the cleaning agent and create a pressure jet directed at the surface. This process is known as cavitation. It ensures intense yet gentle removal of particles of dirt. This happens in all places covered with liquid – in the narrowest of joints and blind holes too. Parts and inner areas which are particularly complicated from a geometric

standpoint – including areas where spray jets or manual cleaning methods fall short – are thoroughly cleaned.

Ultrasonic cleaning equipment with heating system Elmasonic EASY

- contemporary design, with robust cleaning trays made of wear-resistant stainless steel
- Noise-reducing plastic cover with additional function as a drip tray (model S 900/H with stainless steel cover, no drip collector function)
- Nine different sizes with tray volume 0.8 to 28 litres
- Permanent **integrated sweep function** with 100% ultrasonic function at a frequency of 37 kHz
- **Switchable pulse function** to remove tough, mineral-based contaminants and polishing compounds. The ultrasonic effect is boosted up to 20% and the impurities can be removed quickly and easily.
- Warning when the individually adjustable temperature limit is reached to prevent albuminous contaminants hardening or sensitive parts becoming damaged.
- **Supplied with:** with cover and without basket
- **Pricing:** ex works, includes packaging

SARA® Venturi cleaner table

- **Mobile cleaning table for parts and machinery**
- The pneumatic blow gun is continuously supplied with compressed air independently of the foot pedal so that the gun can also be used to clean the machine cabin.
- **Filterless operation, completely maintenance-free**
- **Stainless steel housing** with integrated transport castors
- Equipped with patented X-Cyclone® filter element to prevent aerosol discharge
- Quick connection to the existing pneumatic system
- Negative pressure nozzle for extracting solid particles and liquid mists
- Developed, designed and manufactured in conformity with the relevant EU directives
- Also available with integrated washing table on request
- **Supplied with:** Supplied ready for connection to quick-action pneumatic couplings, including pneumatic blow gun, Y connector, safety screen and operating manual
- **Pricing:** ex works, including packaging

SARA® Chip and emulsion vacuum cleaner

- **Mobile vacuum cleaner for removing coarse particles from liquids as well as clearing up spills and wet chips**
- **A fully automatic bypass process is used to treat the liquid, with no staff intervention involved (simultaneous suction and drainage possible)**
- Quick and easy disposal of foreign matter thanks to removable basket (Ø 3mm perforated sheet)
- Permanent fill level monitoring by means of a viewing tube on the container
- Mechanical float device
- Safety filter cloth with ring – hydrophobic & oleophobic properties
- Fluid drained by an integrated immersion pump
- Colour: RAL 7035 (light grey)
- **Supplied with:** 3m suction hose, 2-pcs. hand tube, floor nozzle with rubber edges, crevice nozzle, PEM pump hose with 1" ball valve, aluminium hose holder and utensil box
- **Pricing:** ex works, includes packaging

SARA® Compressed air chip and wet vacuum cleaner

- **mobile vacuum cleaner for removing coarse particles from liquids, as well as clearing up spills and wet chips**
- quick and easy disposal of foreign matter thanks to removable basket (Ø 3mm perforated sheet)
- permanent fill level monitoring by means of a viewing tube on the container
- mechanical float device
- filter system with integrated stainless steel wire mesh Ø 200mm x 100mm as droplet separator
- integrated collector as cyclone pre-separator to protect the filter device
- suspended silencer Size 4 with protective cover
- chassis with robust release device for raising and lowering the collector below the filter tank
- Colour: RAL 7035 (light grey)
- **Supplied with:** 3m suction hose, 3-pcs. hand tube, aluminium floor nozzle, crevice nozzle, aluminium hose holder and utensil box
- **Pricing:** ex works, includes packaging

Standard version

- Max. intake air: 280m³/h
- Air requirement: 1.33m³/h

SARA® Compressed air industrial vacuum cleaner

NEW · NUOVO · NY · NOUVEAU · NUEVO

for ATEX Zone 21 and 22

- **mobile compressed air vacuum cleaner for removing dry and non-flammable media such as dust, sand, chips, stops, granulate, grains, etc.**
- Corresponds to ATEX Product Guideline 2014/34/EU: Equipment Group II / Category 3 for Zone 22/2
- Filter tank with nine filter elements (total filter surface: 2m²) made of polyester needle felt with IFA Test Certificate for dust class M in accordance with DIN EN60335-2-69-Anh. AA.
- Filter elements are spread apart with earthed supporting bodies and are therefore self-cleaning during the suction operation
- Filter attachment with vacuum meter and auxiliary air flap
- The auxiliary air flap can generate a counter-air flow that exhausts the filter hose from the inside out. This efficient cleaning guarantees extremely long filter service-life, even with fine dust
- 2.2m² HEPA - safety filter cartridge with test certificate for dust class H in accordance with DIN EN 60335-2-69 Anh. AA.
- integrated collector as cyclone pre-separator to protect the filter device
- Suspended silencer Size 4 with protective cover
- chassis with robust release device for raising and lowering the collector below the filter tank
- rollers and filter are electrostatically-conductive
- Colour: all steel parts plastic-coated in accordance with 681TA 70355 C00 DURA pol / black / micro-structure
- **Supplied with:** 3m suction hose, stainless steel hand tube, aluminium floor nozzle, wide rubber nozzle, round brush, PE-EL round-bottom bag, earthing cable, earthing clamp, aluminium hose holder and utensil box
- **Pricing:** ex works, includes packaging

Standard version

Freddy Chip and emulsion vacuum cleaner Freddy

- **Mobile vacuum cleaner for removing ultra-fine particles (max. 10 µm) from liquids**
- Within a few minutes, the coolant container of a machine tool is drained and the coolant fluid cleaned of solid particles and pumped back into the machine, all simply at the push of a selector lever
- Eliminates the need for laborious and time-consuming cleaning work
- Machine downtimes are reduced
- Durable and robust steel design with oil-resistant wheels
- Automatic level control by means of cut-off
- Compact design, simple handling, extremely manoeuvrable
- **Pricing:** ex works, including packaging

For removing ultra-fine particles up to 10 µm

Freddy Ecominor

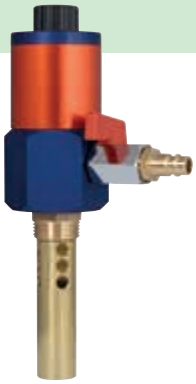
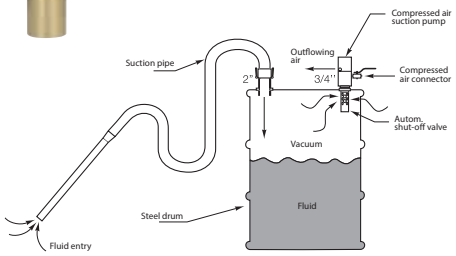
Vacuuming up dirty emulsion, chips and grinding sludge

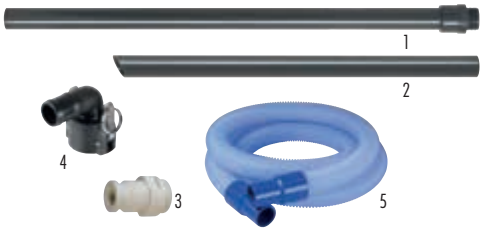


Easy emptying of the filter insert



Returns the cleaned emulsion into the cooling lubricant container

SARA® Pneumatic drum pump



- Pneumatic dual-function suction and pressure pump
- For filling and emptying lubricant and coolant containers
- Used coolant, sludge and small metallic residue is sucked into a steel drum by vacuum
- Simply rotating the knob creates overpressure and the drum can be emptied
- Simply screw the pump into the bung hole (3/4") and the suction hose into the second bung hole (2") of a standard steel drum
- Required pressure approx. 6 – 8 bar
- Filling and emptying of approx. 60 l/min
- Automatic closing valve prevents overflowing
- **Caution:** Do not use the pneumatic pump for highly inflammable or explosive liquids. The steel drum must be undamaged and airtight.
- **Supplied with** approx. 3 m suction hose, coupling, inlet pipe and adapter

ARIANA Filling level display

- For commercially available 60 and 210 l containers
- For non-corrosive fluids such as cutting fluid concentrates, emulsions, oils, antifreeze, heating oil etc. as well as liquid media
- Permanent volume display
- Fitted on 3/4 inch opening, leaving 2" bung opening free

Description	art.no.	€
Filling level display	**742039** 0001	59,90
	7138	

SARA® Canister and barrel mixer

- Mixer for all container sizes
- Easy to handle
- Precise metering ensures economical use of emulsions
- An appropriate mixture ratio can be adjusted precisely using the needle valve
- The concentration should be checked using a hand-held refractometer
- The device operates on the Venturi principle
- All water-soluble concentrates can be mixed
- Can be attached without difficulty to 5, 10, 25, 60 and 200 l containers
- **Delivery includes:** 3 inlet pipes, adapter set for drums and canisters, and two connection hoses

Description	art.no.	€
Canister and barrel mixer	**907056** 0001	419,–
	9122	

SARA® Cutting fluid aerator to reduce bacterial growth

- **Reduces bacterial growth in the cutting fluid**
- Prevents a cohesive tramp oil slick
- Increases the service life of cutting fluids
- Tramp oil should then be removed using an emulsion treatment cart (9030020001) or skimmer system
- Removing tramp oil extends the service life and ensures an even bio balance in the cutting fluid
- Low-maintenance stainless steel housing for easy cleaning
- For direct mounting on the machine
- Can be set with daily or weekly timer
- **Supplied** with timer, aeration plates and connection hoses

Floating foreign oil

SARA® Emulsion maintenance station

- **Stationary/mobile maintenance station for removing foreign oils from the cooling lubricant**
- **Emulsion maintenance without staff intervention and no machine downtime (bypass procedure)**
- **Filters out up to 97 % of foreign oils**
- Separation of emulsion and foreign oils by purely physical means
- Reduced costs due to longer service life of coolant lubricant
- Robust, fully-welded stainless steel housing with oil-resistant outside coating
- Examples of use include machine tools, parts washers
- **Supplied with:** EPS, suction and return hose,
- **Pricing:** ex works, including packaging

model	Transport quantity l/h	Dimensions L x W x H mm	Weight kg	art.no.	€

SARA® Emulsion maintenance cart

No personnel required for tramp oil removal – bypass process

- **Mobile cart for removing large volumes of tramp oil**
- **Emulsion maintenance without staff intervention and no machine downtime (bypass procedure)**
- Filters out solid particles down to 5 µm as well as 98.5 % of all tramp oil
- Coarse particle removal through integrated pre-filter (standard filter 100 µm)
- Emulsion and tramp oil separated by purely physical means
- Reduced costs due to longer emulsion service life
- Reduced risk of allergic reactions, skin disorders and unpleasant smells
- Liquid temperature max. 50 °C
- Overfill protection for safe automatic operation
- Long-life high-performance eccentric spiral pump
- Maintenance-free AC motor, 0.37 kW, 230 V connection
- Robust, fully welded stainless steel housing with oil-resistant outside coating
- For use on machine tools, parts washers or central supplies
- **Delivery includes:** maintenance cart, float, suction and return hose, 100 µm filter insert
- **Pricing:** ex works, including packaging

SARA® Magnetic filter SMF

- Affordable extraction without consumables **SARA** Magnetic filters Particles and impurities from all types of process fluids e.g. cooling lubricant, washing water, cooling water, fuel and much more.
- Thanks to the extremely high field strength, dirt particles are extracted from iron, steel and partially stainless steel, carbide and corundum, and adhere to the exterior of the magnets.
- Separation of tiny particles as small as 1 µm
- Guaranteed flux density of at least 10,000 gauss
- Improved surface quality thanks to cleaner cooling lubricant
- Reduced wear to machinery and tools
- **No disposal costs, filtered material can be recycled**
- **No additional auxiliary energy required**

Considerably reduces operating costs

SARA® Magnetic filters

INFO

Magnetic filters have the ability to remove ferrous particles from process fluids such as cooling water, emulsions, grinding oil, washing water, etc. Due to the force of the magnetic field, ferrous particles such as iron, steel, carbide, etc. are drawn from the process fluids and adhere to the magnetic filter rods. Thus the particles are extracted and can be disposed of quickly, easily and by type; meanwhile the clean process fluid can be reused.

Function

In a filter housing, the contaminated water flows turbulently around the magnetic filter rods. The ferrous particles are drawn to the magnetic filter rods and adhere to the surface of the magnetic filter rods. The filter performance depends on several factors. These include the material and the size of the particles, the viscosity of the fluid to be purified, the magnetic flux density of the magnetic filter rods, the dwell time of the fluid in the magnetic field, as well as the distance between the particles and the magnetic filter rods. **Optimum separation rates** are achieved thanks to the use of ultra-efficient magnetic materials with very high magnetic forces and the flow-optimised design of SARA magnetic filters.

SARA magnetic filters are characterised, in particular, by the optimisation of these factors. The use of ultra-efficient magnetic filter rods with a magnetic flux density of at least 10,000 gauss guarantees the best filtration results, even filtering out particles measuring less than 1 µm. The optimised flow guidance in the magnetic filter also improves the effect of the magnetic filter rods.

SARA magnetic filters are used in a wide range of production processes

- Filtration of cooling lubricants during grinding or honing work
- Purification of cooling water or washing water
- Removal of particles from cutting oils
- Removal of superfine particles from drawing oils

Using magnetic filters can enhance the manufacturing quality in production processes due to fewer particles, and thus significantly increase the service life of process fluids. SARA magnetic filters work without additional auxiliary power, are manufactured from high-quality, durable stainless steel, and are equipped with Viton seals.

SARA® Belt skimmer

CE

Oil skimmer systems: Contaminations in coolant emulsions from leaked oil floating on the surface, such as hydraulic oil, peripheral lubrication or contact surface oil cause problems with the production process. Oil leakages reduce oxygen absorption, thus encouraging bacterial growth. They also cause deposits to develop on machines and workpieces, increase the formation of oil mist and reduce cooling performance. The consequences are: skin diseases, unpleasant odours, higher disposal costs, corrosion, bacterial contamination, poor cooling performance and problematic chipping behaviour. The following oil skimmer systems provide assistance in this regard.

- Special oil-carrying belt
- Tramp oil removal from the emulsion surface
- Installed above the emulsion container, requires little space
- Immersion depth: 225 mm

Absorbent

INFO

- Optimum absorption results for oil, coolants, solvents, water
- Saves costs
- Safe, prevents slipping

For leaking liquids on your premises!

Selection criteria for PIG® mats

Absorbed liquids		PIG® mat	Particularly well-suited for	Page
All-purpose Absorbs and stores oils, coolants, solvents and water For liquids such as: • Hydraulic oil • Plant oil • Petrol • Paraffin • Anti-freeze • Propylene glycol • Acetone • Toluene • Xylene • MEK (Butanone, methyl ethyl ketone)	Hard-wearing	**PIG BLUE™ mat**	Maintenance work that requires a high level of absorption	1564
		PIG® all-purpose mat	Absorption of leaks and dripping in the course of daily maintenance	1560
		PIG® all-purpose drum lid mat	Dripping pumps and cleaning of drum lids	1564
	Ultra-hard-wearing	**4 IN 1® mat**	General cleaning with an all-purpose product	1561
		FAT MAT® all-purpose mat MAT 2101/2102	Cleans up large leaks	1560
		HAM-O® all-purpose mat	Covering absorbing liquids for a clean workplace	1564
	Very hard-wearing	**PIG® elephant mat**	Passageways and walkways in highly visited areas	1563
		TRAFFIC MAT® rug	Passageways and walkways in areas with forklift traffic	1563
Oil-Only Absorbs and stores oils and oily liquids without absorbing water • Motor oil • Hydraulic oil • Petrol • Diesel fuel • Paraffin	Hard-wearing	**PIG® brown oil-only mat**	Absorption of oil-based liquids, blends in with the surrounding environment, can also be used in outdoor areas	1565
		PIG® white oil-only mat	Absorption of oil-based liquids with good visibility of liquids, can also be used in outdoor areas	1565
	Ultra-hard-wearing	**4 IN 1® oil-only mat**	General oily cleaning applications with a single product	1565
		FAT MAT™ oil-only mat	Cleans up large leaks	1565

Selection criteria for PIG® absorbent linings

Absorbed liquids	absorbent lining	Absorption	Filling	Formability	Special characteristics	Page
All-purpose Absorbs and stores oils, coolants, solvents and water	**PIG® original**	Up to 1.9 l	Grits	Extreme	Extremely flexible and cheap, can be laid out closely around machines	1566
	PIG® blue	Up to 14 l	Granulate	super	Unbeaten ground adhesion, for use on dripping machines and for eliminating leaks	1566
	PIG® super	Up to 7.6 l	Cellulose	Normal	Extremely absorbent, ideal when maximum absorption performance is required	1566

Many PIG® products are manufactured partly or fully from recycled materials.
The percentage of recycled materials is always specified.

Universal mat

- **High absorbency ensures a clean and safe workplace**
- Simply place the mat over the spill
- Rapid absorption and high strength, even with fully saturated mats
- Saves on disposal costs due to the reduced volume
- Perforation enables mats to be laid as needed
- For absorbing oil, coolants, solvents and water
- Ideal for wiping off machinery, laying out tool boxes and covering work areas
- The exceptionally hard-wearing 4-in-1® mats (MAT284 and MAT235) can be used as an underlay, roll, wipe and absorbent sock
- **Price per pack**

SPILLBLOCKER®

- **Containing leaks**
- Made of non-absorbent polyurethane; resistant to water, oil and most chemicals
- Flexible down to -20 °C – adheres to smooth floors, forms a dam that can be curved as necessary
- Containing liquids
- Diverting liquids
- Protects sites from approaching liquid flows
- Due to the high weight and flexibility of the polyurethane, SPILLBLOCKER® forms a tight seal with the floor with even minor surface irregularities sealed
- Connecting sections for joining together and corner sections for rectangular layouts available

Rectangular barriers are formed using corner sections PLR206.

For greater leaks, two or more barriers are jointed with connectors PLR205.

Type	Dimensions	Contents	art.no.	€

			9203	

LITE-DRI absorbent

- **Absorbs up to 30 litres per bag, three times more than binding granulate**
- Absorption capacity: 1 kg = approx. 3 l
- Rapid absorption
- No silicate dust formation
- Does not scratch floors or machinery (cellulose-based)
- Leaves ash residue of less than 5 % when incinerated.
- **Pricing:** ex works, including packaging

Contents	art.no.	€
10 kg	**911001** 0300	22,–
	9203	

SARA® Special granules SARA-Sorb V2000

- 1 kg granulate is sufficient for approx. 30 - 45 m^2
- Absorption capacity: 1 kg = 0.724 litre
- Up to three times higher absorption than conventional granulates
- Absorbs virtually all liquids during operation, e.g. leaking oil, fuel, chemicals, acids, alkalis and solutions
- Fine-grained, Class III R natural material that has been calcinated several times for ecological and cost-saving use on smooth or porous surfaces
- Dust and asbestos-free, chemically neutral, non-combustible, non-toxic, crush-resistant, does not stain and leaves no residues
- Retains its strength even in a saturated state (no sludge formation)
- **Note:** All used oil binders must be disposed of in accordance with the waste code number and the medium that was absorbed.
- **For orders of 1 pallet (65 buckets or 56 bags of 10 kg), we offer a 20 % volume discount**
- **Pricing ex works, including packaging**

SARA® Foot grilles

- **The safe machine base**
- Made of dried beech
- Can be rolled up – practical for cleaning
- Elastic, relieves strain on the vertebrae
- Robust, can also withstand hard use on machines
- Maintenance-free, no wear at connecting elements
- Supported by oil-resistant, fibre-reinforced rubber belts
- Profiled batten surface, height 3.5 cm
- Available grille widths 60 - 150 cm
- Grille length as required, prices per running metre
- 970111.... Standard version without access ramp
  970112.... Additional charge for version with access ramp along one width (for version with access ramps along both widths, please order 2x)
  970113.... Additional charge for version with access ramp along length
  970114.... Additional charge for impregnation
- Corundum coating for maximum skid resistance also available on request
- Price per running metre
- **For orders with access ramp on one side, please specify which side (see example)**
- **Delivery:** free kerbside delivery within Germany, excluding platforms and custom designs

sunnex Mat system

- **For damp and oily areas**
- Thickness: 13 mm
- A significant factor influencing the health and productivity of staff
- Reduces fatigue and joint pain in the feet, legs and back
- Non-slip, noise and heat insulating
- Sealed surface, easy to clean
- Tapered edge, no trip hazard, can be driven over
- Individual parts can be fitted together like jigsaw pieces
- Dovetail profile for simple, tool-free connection
- Nitrile rubber – exceptionally resistant to wear, cleaning agents, cutting oils, hot chips, falling tools
- **ESD version available on request**

NOTRAX® Ergonomic workplace floor covering DIAMOND SOF-TRED

- **For dry areas**
- Thickness: 12.7 mm
- Weight: approx. 6 kg/m²
- Floor covering for walking and standing in safety
- Non-slip surface
- Extra strong vinyl foam ensures enhanced ergonomic benefits
- Prevents premature symptoms of fatigue and protects the user from cold concrete floors, protects the floor and reduces the risk of breaking tools
- Dyna-Shield™ hard-wearing surface increases durability by 50 % in comparison to conventional vinyl floor coverings
- Four tapered edges eliminate tripping hazards

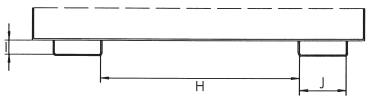
Chip tipping trough 0.40 m³, low trough	955038 0020	157,–
Chip tipping trough 0.25 m³, low trough	955038 0010	138,–
	9107	

Swivel and fixed castors for tipping troughs



- Swivel castor with wheel stop

Description	D mm	art.no.	€
2 swivel and 2 fixed castors made of polyamide, height 225 mm	180	**955036** 0060	157,–
		9107	

Tipper with roller system

- **Compact tipper with roller system, good centre of gravity**
- **Tipping at any height by means of cable control from the forklift seat**
- **For all types of bulk material**
- **Load bearing capacity up to 1500 kg**
- Robust sheet steel design with circumferential edge profile
- Robust base frame with forklift pockets
- Designed to prevent accidental slipping and tipping off
- Painted RAL 5012 (light blue) or RAL 7005 (mouse grey)
- **Other RAL colours available on request**
- **Custom designs available on request**
- **Supplied with:** Tipper without castors (castors available on request)
- **Pricing:** free kerbside delivery within Germany

Equipped with optional castors, RAL 5012

RAL 7005

Forklift load hook

- Holding fixture with 1 or 2 fork arms
- Safety mechanism to prevent slipping off
- With rotating load hook
- Surface painted in RAL 2000 (yellow orange) or hot-dip galvanised
- **Free kerbside delivery within Germany**

For lifting with 1 fork arm
- With eyelet for lifting by crane
- Forklift pocket inner dimensions A / B / C (mm): - / 168 / 68

Dimensions L x W x H mm	Load bearing capacity kg	Weight kg	Galvanised art.no.	€
300 x 180 x 395	1000	10	**958002** 1000	225,–

9107

For lifting with 2 fork arms
- Also suitable for lifting trucks
- Forklift pocket inner dimensions A / B / C (mm): 160 / 220 / 80

Dimensions L x W x H mm	Load bearing capacity kg	Weight kg	Galvanised art.no.	€
170 x 750 x 385	1500	23	**958002** 1500	380,–

Drum collection trays

- For storing drums and small containers
- Conformity declaration (ÜHP) in accordance with StawaR, approved for ignitable liquids of GHS categories 1-3 and aquatic pollutants of GHS categories 1-4
- Construction of 3 mm sheet steel, hot-galvanised
- **With galvanised grating (load bearing capacity 1000 kg/m²)**
- Ground clearance 100 mm
- **Pricing:** free kerbside delivery within Germany

Programming note for profile milling

INFO

Calculating the tool Ø for reaming an existing bore

Ødc = ØDh - ØDc

Ø area = bore Ø - tool Ø

- The max. depth during radial run-out should not exceed the max. clamp depth ap.
- Work anti-clockwise for downward milling.
- Reduce the cutting data by min. 70% for ramping and circular cutting.
- Reduce the feed by 50% when drilling along the Z-axis.
- Please ensure sufficient safety, particularly with long boring chips.

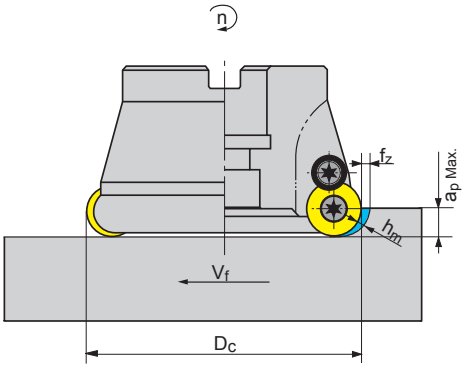
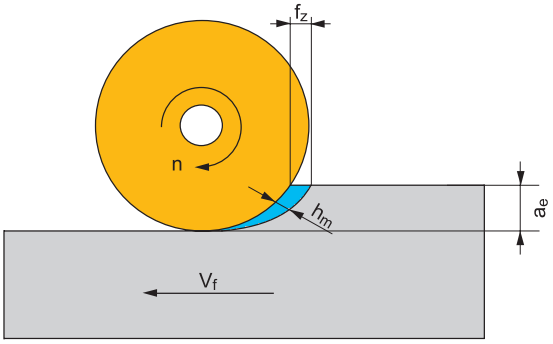
Designations and formulae (milling)



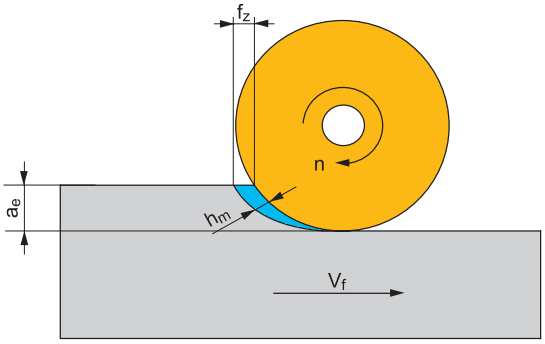
Dc	Cutting diameter	mm
ae	Radial cutting width	mm
ap	Axial cutting depth	mm
f	Feed per revolution	mm/rev
fz	Feed per tooth	mm/rev
De	Effective cutting diameter	mm
Vc	Cutting speed	m/min.
Q	Material removal rate	cm^3/min.
l	Working length	mm
Vf	Feed rate	m/min.
Dap	Max. cutting diameter for specified cutting depth	mm
zn	Number of cutting corners in the tool	

zc	Effective number of cutting edges	
hex	Maximum chip thickness	mm
hm	Average chip thickness	mm
kc1	Specific cutting force (hex = 1 mm)	N/mm^2
Pa	Drive power	kW
kr	Tool cutting edge angle	° (degree)
Vco	Cutting speed (constant)	
Cvc	Cutting speed correction factor	
n	Rotational speed	rpm
ηmt	Efficiency	%
mc	Increasing the specific cutting force through the chip thickness	

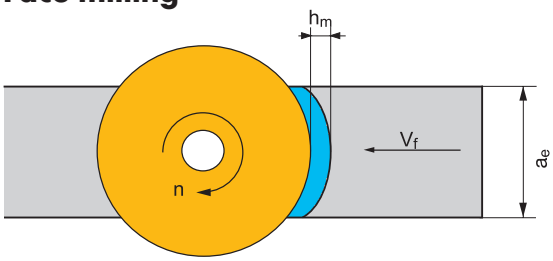


Cutting speed	$V_c = \frac{\pi \times D_c \times n}{1000} = m/min.$
Feed	$V_f = f_z \times n \times z_n = mm/min.$
Feed per revolution	$f_n = \frac{V_f}{n} = mm/U$
Specif. cutting force	$k_c = k_{c1} \times h_{nm}^{-mc} = N/mm^2$
Average chip thickness (face and shoulder milling) ae / Dc ≤ 0.1	$h_m = f_z \sqrt{\frac{a_e}{D_c}} = mm$
Average chip thickness ae / Dc ≥ 0.1	$h_m = \frac{\sin k_r \times 180 \times a_e \times f_z}{\pi \times D_c \times \arcsin\left(\frac{a_e}{D_c}\right)} = mm$

Rotational speed	$n = \frac{V_c \times 1000}{\pi \times D_c} = U/min.$
Feed per tooth	$f_z = \frac{V_f}{n \times z_n} = mm/U$
Material removal rate	$Q = \frac{a_p \times a_e \times V_f}{1000} = cm^3/min.$
Effective cutting edge diameter	$D_e = 2 \times \sqrt{a_p \times (D_c - a_p)} = mm$
Drive power	$P_a = \frac{a_p \times a_e \times V_f \times k_c}{60 \times 10^6 \times \eta_{mt}} = kW$
Machining time	$T_c = \frac{l}{V_f} = min.$

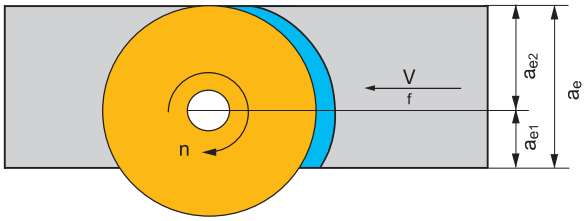


Synchronous rotation and counter-rotation



Synchronous rotation
- Rotational direction of the milling cutter and the feed direction
  are the same.
- Greatest chip thickness upon entry of the milling cutter.
- Counter-rotation is preferable in stable machines.

Counter-rotation
- In counter-rotation the rotational direction of the milling cutter opposes the feed direction.
- Counter-rotation milling is used for labile milling machines and hard materials.

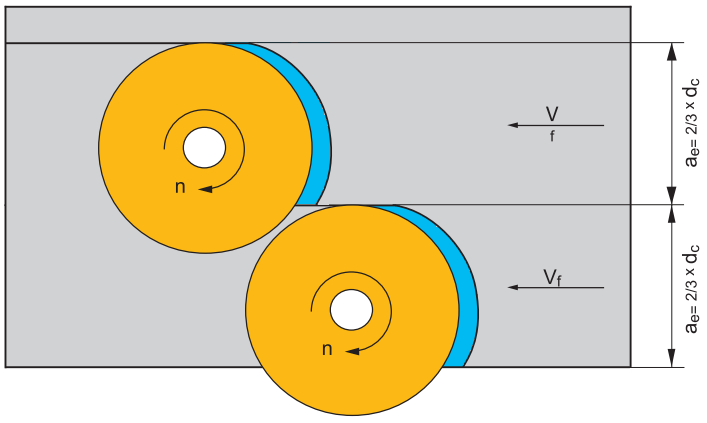


Face milling

$$h_m = \frac{\sin(k_r) \times 180 \times a_e \times f_z}{\pi \times d_c \times \arcsin\left(\frac{a_e}{d_c}\right)}$$

$$f_z = \frac{h_m \times \pi \times \arcsin\left(\frac{a_e}{d_c}\right)}{\sin(k_r) \times 180 \times a_e}$$

Offset milling



$$h_m = \frac{\sin(k_r) \times 360 \times a_e \times f_z}{\pi \times d_c \times \left[\arcsin\left(\frac{2 \times a_{e1}}{d_c}\right) + \arcsin\left(\frac{2 \times a_{e2}}{d_c}\right)\right]}$$

$$f_z = \frac{h_m \times \pi \times d_c \times \left[\arcsin\left(\frac{2 \times a_{e1}}{d_c}\right) + \arcsin\left(\frac{2 \times a_{e2}}{d_c}\right)\right]}{\sin(k_r) \times 360 \times a_e}$$

Recommended milling operation

Max. 2/3 x milling cutter diameter
In synchronous or
counter-rotation

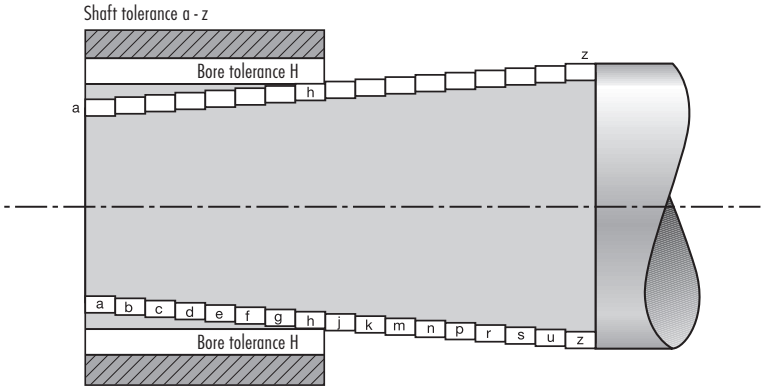
ISO standard shaft system fits

INFO

- (Excerpt from DIN 7155)
- **Nominal dimensions in µm (= 0.001 mm)**
- Maintain all shaft h-tolerances for system standard shaft. The maximum shaft dimension therefore goes up to the zero line and is equal to the nominal dimension. The smallest shaft dimension is smaller than its nominal value by the tolerance.
- All information is supplied without guarantee



- Fitting type preferably according to DIN 7157
- (S = clearance fit)

Bores	Fitting type	Nominal dimension from ... to ... mm																		
		1 – 3	3 – 6	6 – 10	10 – 14	14 – 18	18 – 24	24 – 30	30 – 40	40 – 50	50 – 65	65 – 80	80 – 100	100 – 120	120 – 140	140 - 160	160 – 180	180 – 200	200 – 225	225 – 250

ISO standard bore system fits

INFO

- (Excerpt from DIN 7154)
- **Nominal dimension in µm (= 0.001 mm)**
- In this system all bores are manufactured uniformly with an H-tolerance. The minimum bore dimension therefore goes precisely up to the zero line and is equal to the nominal dimension. The maximum dimension exceeds the zero line by the tolerance.
- All information is supplied without guarantee

- Fitting type preferably according to DIN 7157
- P = press fit
  S = clearance fit
  Ü = transition fit)

Guideline values for surface qualities

INFO

Roughness depth range Rz µm	Rt specification µm	complies with Ra value	ISO roughness classes	ISO 1302	Corner radius r (mm) and feed f (mm)			
					r = 0.4	r = 0.8	r = 1.2	r = 1.6
63 - 100	Rt 100	12.5 - 25	N 11	25.0	-	0.51	0.69	0.88
40 - 63	Rt 63	6.3-25	N 10	12.5	0.27	0.43	0.56	0.68
31.5 - 40	Rt 40	4.9 - 6.3	N 9	6.3	0.25	0.37	0.49	0.57
25 - 31.5	Rt 31.5	4.0 - 4.9	N 9	6.3	0.22	0.32	0.41	0.47
16 - 25	Rt 25	2.5 - 4.0	N 8	3.2	0.20	0.28	0.36	0.39
10 - 16	Rt 16	1.6 - 2.5	N 8	3.2	0.15	0.22	0.29	0.31
6.3 - 10	Rt 10	1.0 - 1.6	N 7	1.6	0.10	0.13	0.18	0.20

Calculation formula (theoretical value):

$$Rt = \frac{f^2}{8 \times r} \times 1000\ \mu m$$

Rt = surface quality µm
f = feed mm/rev
r = corner radius mm

Feed calculation

$$f = \sqrt{\frac{Rt \times 8 \times r}{1000}}\ mm$$

Hardness and tensile strength comparison

INFO

- All hardness values calculated using different hardness testing methods on various materials are only roughly comparable.
- 2) = The Rockwell values specified to one decimal place are merely for interpolation and must be rounded to whole numbers in the end result.

Clamping forces and tightening torques for metric screws

INFO

The appropriate tool for the form is required. A torque wrench must be used for some connections. Testing equipment that calculates the open and close torque is frequently used in industry or laboratories. The applications in force measurement technology are very varied, allowing for example the torque of screws, components, switches and drive shafts to be measured. Testing equipment to calculate the torque is not required for domestic use. Below you can find tables showing the screw standards and associated tightening torques.

Clamping forces and tightening torques for steel shaft screws.
Tightening torques for aluminium, VA steel and titanium screws:
Aluminium screws equivalent to strength class 5.6
V2A screws equivalent to strength class 6.8
Titanium screws equivalent to strength class 8.8

Tightening torques for DIN 912 screws according to strength class for standard thread

SI units – International Measurement Units

INFO

- SI-Système International d'Unités = International System of Units

The key prefix symbols and their application

Mega	M	1,000,000 = 10^6	1 MW = 1,000,000 W
Kilo	k	1,000 = 10^3	1 kW = 1,000 W
Hecto	h	100 = 10^2	1 hl = 100 l
Deca	da	10	1 daN = 10 N
Deci	d	0.1 = 10^{-1}	1 dm = 0.1 m
Centi	c	0.01 = 10^{-2}	1 cm = 0.01 m
Milli	m	0.001 = 10^{-3}	1 mm = 0.001 m
Micro	µ	0.000001 = 10^{-6}	1 µm = 0.000001 m

Previous names and unit symbols that remain unchanged

Volume	Litre	l	1 = 1 dm^3 = 0.001 m^3
Mass	Tonne	t	1 t = 1 Mg = 1000 kg
Pressure	Bar	bar	1 bar = 105 Pa
Area	Ar	a	1 a = 102 m^2
Angle	Degree	°	1° = 17.45 mrad
	Minute	′	1°/60 = 0.291 mrad
	Seconds	″	1./60 = 4.85 rad
Time	Minute	min	1 min = 60 s
	Hours	h	1 h = 3600 s
Velocity		km/h	1 km/h = 1/3.6 m/s
		m/s	1 m/s = 3.6 km/h

The SI system allows a clear distinction between force and mass (weight) and eliminates the confusion between the terms kp and kg.
The unit of force is Newton (N). The unit of mass (weight) is kilogramme (kg). The difference is generated by the gravitational acceleration of 9.81 m/s^2.

The key conversions between the previous and new SI units

1 N	= 0.102 kp
1 Nm	= 0.102 kpm (= 1 joule)
1 W	= 0.102 kpm/s (= 1 J/s)
1 kW	= 1.36 PS
1 KW	= 860 kcal/h
1 J	= 0.102 kpm
1 J	= 0.239 cal
1 Pa	= (1 N/m^2) = 0.102 kp/m^2
K	= °C + 273.15
1 kp	= 9.81 N
1 kpm	= 9.81 N
1 kpm/s	= 9.81 W
1 PS	= 0.736 kW
1 kcal/h	= 1.16,10-3 kW = 0.00116 kW
1 kpm	= 9.81 J
1 cal	= 4.19 J
1 kp/m^2	= 9.81 Pa = 9.81 N/m^2
1 kpm/s	= 9.81 W
1 PS	= 0.736 kW
1 kcal/h	= 1.16,10-3 kW = 0.00116 kW
1 kpm	= 9.81 J
1 cal	= 4.19 J
1 kp/m^2	= 9.81 Pa = 9.81 N/m^2

The table also illustrates that 1 kp = 9.81 N and/or 1 N = 0.102 kp.
With an error rate of only 2 percent, the difference between kp and N is a factor of 10.
Therefore in practice the following values are assumed:
1 kp = 10 N
1 N = 0.1 kp

The key SI units

Length	Metre	m
Mass	Kilogramme	kg
Time	Seconds	s
Electr. current	Ampere	A
Force	Newton	N
Torque	Newton metre	Nm
Output	Watt	W
Energy (work)	Joule	J
Pressure	Pascal	Pa
Temperature	Kelvin	K

Energy/work (joule)

The energy unit has 3 equal designations:

Newton metre	Nm	Mechanical energy form
Watt seconds	Ws	Electrical energy form
Joule	J	Calorific energy form

The corresponding designation should be selected to express whether the energy form is mechanical, electrical or calorific:
1 J = 1 N = 1 W (in relation to the absolute size)

Conversion of mechanical tension

Measuring unit	N/mm^2	PA	kp/mm^
1 N/mm^2	1	106	0.102
1 PA	10^6	1	0.102 - 10^{-6}
1 kp/mm^2	9.81	9.81 - 106	1

Also calculated as follows with sufficient accuracy (2% deviation):
1 N/mm^2 = 0.1 kp/mm^2
1 kp/mm^2 = 10 N/mm^2

The kelvin scale begins with the absolute zero point = 273.15 °C

The following should clarify the correlation between °C and K:

	Kelvin	°C
Absolute zero point	0 K	-273.15 °C
Ice melting point	273.15 K	0 °C
Water boiling point	373.15 K	+100 °C

In practice e.g. the statement that water is 20 °C warm remains unchanged. This must only be indicated in kelvin (K) for temperature differences. Here 1 °C corresponds precisely to 1 K.
For example: The difference between the temperature on the external window frame and internal window frame is 15 K. The symbol ° for degree is omitted for temperature values in kelvin.

Wrench width-across-flats tolerances

INFO

- Excerpt from DIN 475 Part 2
- * = wrench widths-across-flats correspond to international standards
- Wrench widths-across-flats 6, 9, 12, 14, 17, 19, 20, 22, 23, 25, 26, 28 and 32 are in brackets in ISO/DIS 691 and referred to as transition values.

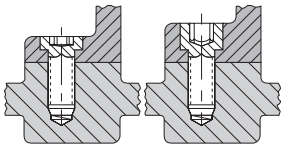
TORX® screw tools

INFO



The use of TORX® screws with TORX® screw tools offers considerable benefits:

The force transmission across surfaces (instead of selectively) guarantees greater torque.

The hexagonal TORX® profile with rounded edges prevents tension points in the screw head and in the tool.
Optimum fit prevents slippage and damage to the screw head and thus guarantees greater durability and longer service life of the tools

Ideal conditions, even in the most challenging spatial constraints, thanks to small dimensions of the screws and tools.
